PREFACE

This report marks a significant milestone in the work of Statistics Botswana. It presents the results of the first ICT Household Survey, conducted in 2014. Statistics Botswana has included ICT household surveys in its integrated survey programme, and will henceforth be carried out once every five years.

The main objective of the survey was to fill the gap created by unavailability of reliable and relevant ICT statistics as well as to provide a platform upon which formulation, monitoring and evaluation of ICT policies and programmes can be based on. Development of ICT infrastructure and expansion of use is important in the economic and social development of any country. ICT indicators for a given country inform on the status of the coverage and effectiveness of the ICT infrastructure as well as its application in varied areas. It is therefore important for these indicators to be produced on a regular and timely basis.

The report presents the results relating to access to, and use of, ICT by households and individuals. It also presents results that inform of the reasons for the non-use of ICT by some individuals.

For additional information on the 2014 ICT Household Survey, please contact Statistics Botswana at info@statsbots.org.bw. Requests to use survey data for further analysis can be made in writing to the Statistician General through the above email address or postal address shown below:

ACKNOWLEDGEMENT

Statistics Botswana would like to acknowledge and appreciate all those who contributed to the success of the 2014 ICT Household Survey. Special gratitude is forwarded to the residents of Botswana for their cooperation and patience during the survey; the different stakeholders who served in different committees during the preparation and execution of the survey for providing insight and their expertise to the survey; all the field and data management staff (supervisors, enumerators, drivers, editors, coders, data entry personnel) for their tireless efforts they combined to collect and process data despite the hardships; the media for sensitizing all about the survey, Statistics Botswana officers for coordinating the exercise and performing different activities; and all those not mentioned but whose input led to the successful completion of the 2014 ICT Household Survey.

CHAPTER 1: INTRODUCTION

1.1 Background

This report presents results for the Information and Communication Technology (ICT) Household Survey conducted in Botswana by Statistics Botswana in 2014. Statistics Botswana conducted this survey for the first time in 2014 in order to fill the gap in ICT household statistics. Prior to this survey, statistics on social dimension of ICT impact was very limited and largely based on estimates from surveys which were not modeled for that purpose.

The 2014 ICT household Survey collected information on household access to and individual use of ICTs for the period 2014. Information on individual use of ICTs was collected from individuals aged 10 years and over while that on household access was collected at household level. The survey covered the whole country and assessed digital divide (inequality in access to, and use of ICTs), social interaction through ICT and, more generally, characteristics of access to technologies and their use by different demographic and social groups.

The report presents results relating to

- Household Access to ICTs
- Individual Use of ICTs
- Reasons For Individuals Not Using ICTs

1.2 2014 ICT Household Survey Objectives

The inherent power of ICT in innovation, economic growth and productivity calls for availability of relevant, timely and reliable ICT statistics, both at household, individual and enterprise level. To respond to this, Statistics Botswana found it necessary to add ICT Household Surveys in her work programme. The main objective of the 2014 ICT Household Survey was therefore to provide a platform upon which formulation, monitoring and evaluation of ICT programmes and policies will be based.

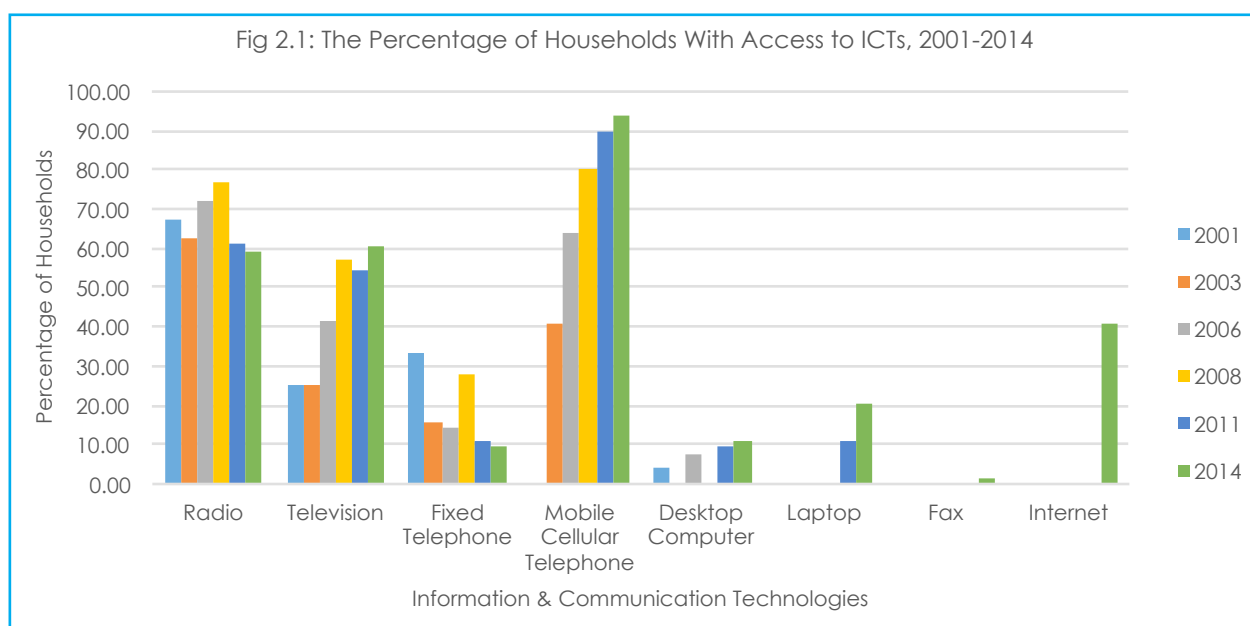

Specifically, the survey was meant to:

- obtain socio-economic information with a view to understand types of ICTs accessible to Botswana residents and usage patterns of ICT services;
- collect, collate and analyze ICT statistics in line with ITU and WSIS indicators;
- determine the ICT access gaps and identify barriers to ICT access in Botswana
- provide a knowledge base for designing, evaluating and reformulating ICT policies, programmes and strategies.
- assess the digital divide in households in Botswana
- provide data for international and regional comparison, benchmarking and for tracking progress towards achieving the SDGs, ITU and WSIS targets
- develop a database on access and usage of ICTs in Botswana

CHAPTER 2: HOUSEHOLD ACCESS TO ICTs

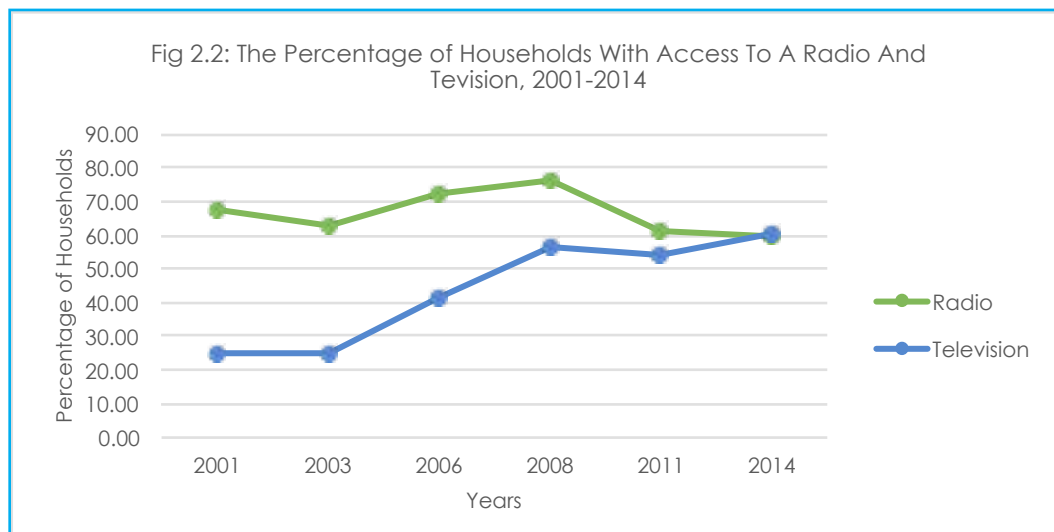

2.1 Chapter Overview

The 2014 ICT Household Survey shows that there were 606,071 households in Botswana. Out of these, 63.3 percent of them had access to electricity. Furthermore, the survey reveals that 59.4 percent of all households had access to a radio, 60.3 percent had access to a television, 94.0 percent had access to a mobile cellular telephone, 40.6 percent had access to internet, 20.6 percent had access to a laptop, 10.9 percent had access to a desktop computer and 9.5 percent had access to a fixed telephone. This is shown in **Table 1 of Appendix 1** and **Figure 2.1** below.

2.2 Household Access to a Radio

The proportion of households with working radio sets in Botswana stood at 59.4 percent in 2014, showing a 2.1 percentage points fall from 61.5 percent recorded in the 2011 Population and Housing Census. As indicated in **Fig: 2.2** below and **Table 1** in **Appendix 1**, households with radio sets have been reducing over the years.

Male Headed Households dominated in households with access to a radio, they constituted 32.1 percent of total households while Female Headed Households with radio sets made up 27.3 percent of total households (**Table 3, Appendix 1**).

Households headed by those aged 35-44 years and 25-34 years constituted the largest proportion of households with radio sets. They constituted 26.6 percent and 25.8 percent of total households respectively. Households headed by those aged below 15 years and those aged 75 years and above constituted the smallest proportion of households with radio sets. See **Table 4 in Appendix 1**.

With regard to household ownership of radio sets by education level of the head of household, the 2014 ICT household Survey shows that households headed by those with secondary school education formed the largest proportion of households with radio sets. This group was followed by households headed by those with tertiary education, they made up 31.9 percent of total households (**Table 5 in Appendix 1**).

2.3 Household Access to a Television

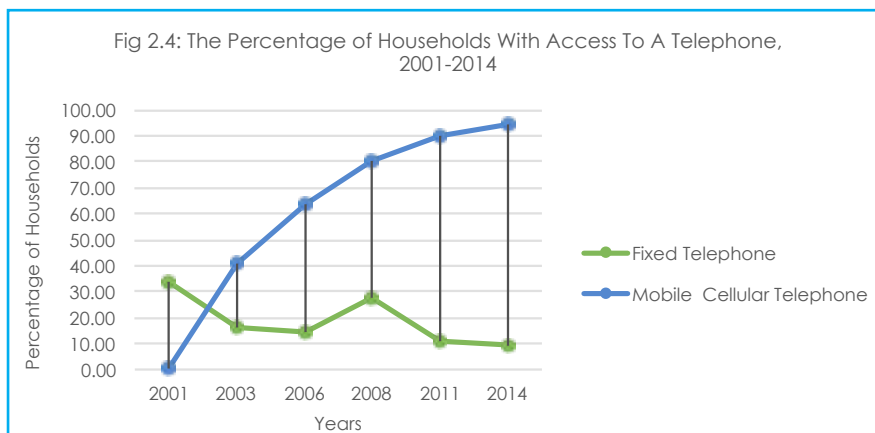

The 2014 ICT Household Survey shows that 60.3 percent of all households had access to a working television, an increase of 6.2 percentage points from the 54.1 percent registered in 2011 from the Population and Housing Census. This is the opposite of the trend realized in households with access to a radio. Refer to **Table 1 in Appendix 1** and **Fig 2.2** above.

The City of Gaborone dominated once again in households with access to television (**Table 2, Appendix 1**). It constituted 20.8 percent of all households with television sets. Kweneng East and the City of Francistown followed with 15.7 percent and 6.3 percent respectively.

Male headed households with television sets constituted 32.3 percent of all households in Botswana while female headed households with television sets made up 28.0 percent of all households (**Table 3, Appendix 1**).

2.4 Household Access to a Telephone

Households with fixed telephones has been reducing over the years while households with mobile cellular telephones has instead been increasing. This is revealed by data from the 2014 ICT survey and other censuses/ surveys which were conducted before it.

Households with mobile cellular telephones rose from 159,680 households in 2003 to 569,991 households in 2014, registering a tremendous increase of more than 200 percent. Households with fixed telephones, on the other hand, reduced from 63,084 households recorded in 2003 to 57,302 households in 2014, showing a fall of 9.2 percent.

2.5 Household Access to a Computer

Of all households in Botswana, the 2014 ICT Household Survey shows that 20.6 percent of them had laptop computers while 10.9 percent owned desktop computers. Disaggregating this by gender of the household head, the survey shows that male headed households who owned desktop computers in 2014 formed 6.6 percent of all households while female headed households with desktop computers constituted 4.3 percent of the total. On the same note, male headed households with laptops comprised 12.1 percent of all households and female headed ones made up 8.5 percent. See **Tables 1** and **3** in **Appendix 1**.

Gaborone, Kweneng East, South East and Francistown regions had most households with computers (**Tables 2, Appendix 1**).

Most of the households headed by those aged 25-54 years had computers while households headed by those with tertiary education dominated in household computer ownership (**Table 5 in Appendix 1**).

2.6 Household Access To The internet

Households with access to internet comprised 40.6 percent of all households in 2014. Mobile Internet was the most prevalent among the households. It was used by 94.3 percent of all households with access to internet. Fixed wireless was the next most prevalent internet connection used by most households (with 9.8 percent) followed by asymmetric digital subscriber line with 7.3 percent (**Table 8 in Appendix 1**).

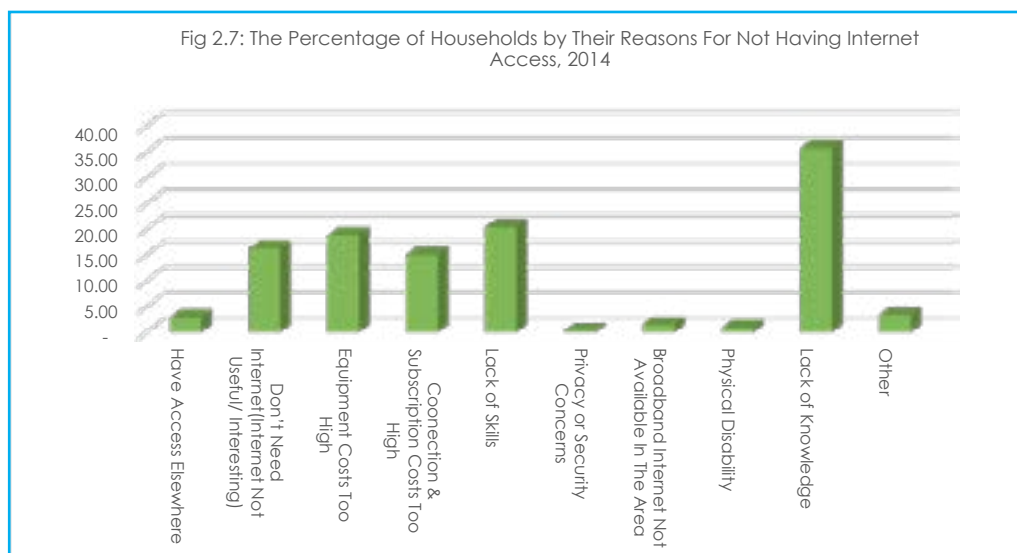

Households headed by those within the age groups 25-34 years and 35-44 years dominated in households with access to internet. Most households with access to internet were headed by those with tertiary and secondary school education. This is shown in **Tables 4 and 5 of Appendix 1**.

The City of Gaborone had the highest proportion of households with access to the internet (24.1 percent). Kweneng East District and Ngwaketse District followed with 11.4 percent and 7.1 percent respectively (**Table 2 in Appendix 1**).

2.7 Reasons for Households Not Connected To Internet

Out of 606,071 households in Botswana, 360,130 (59.4 percent) of them had no access to internet. Kweneng East District followed by Gaborone had more households with no internet access, they had 15.1 percent and 10.4 percent of the total respectively. Central Tutume was next with 7.6 percent of all households with no internet access.

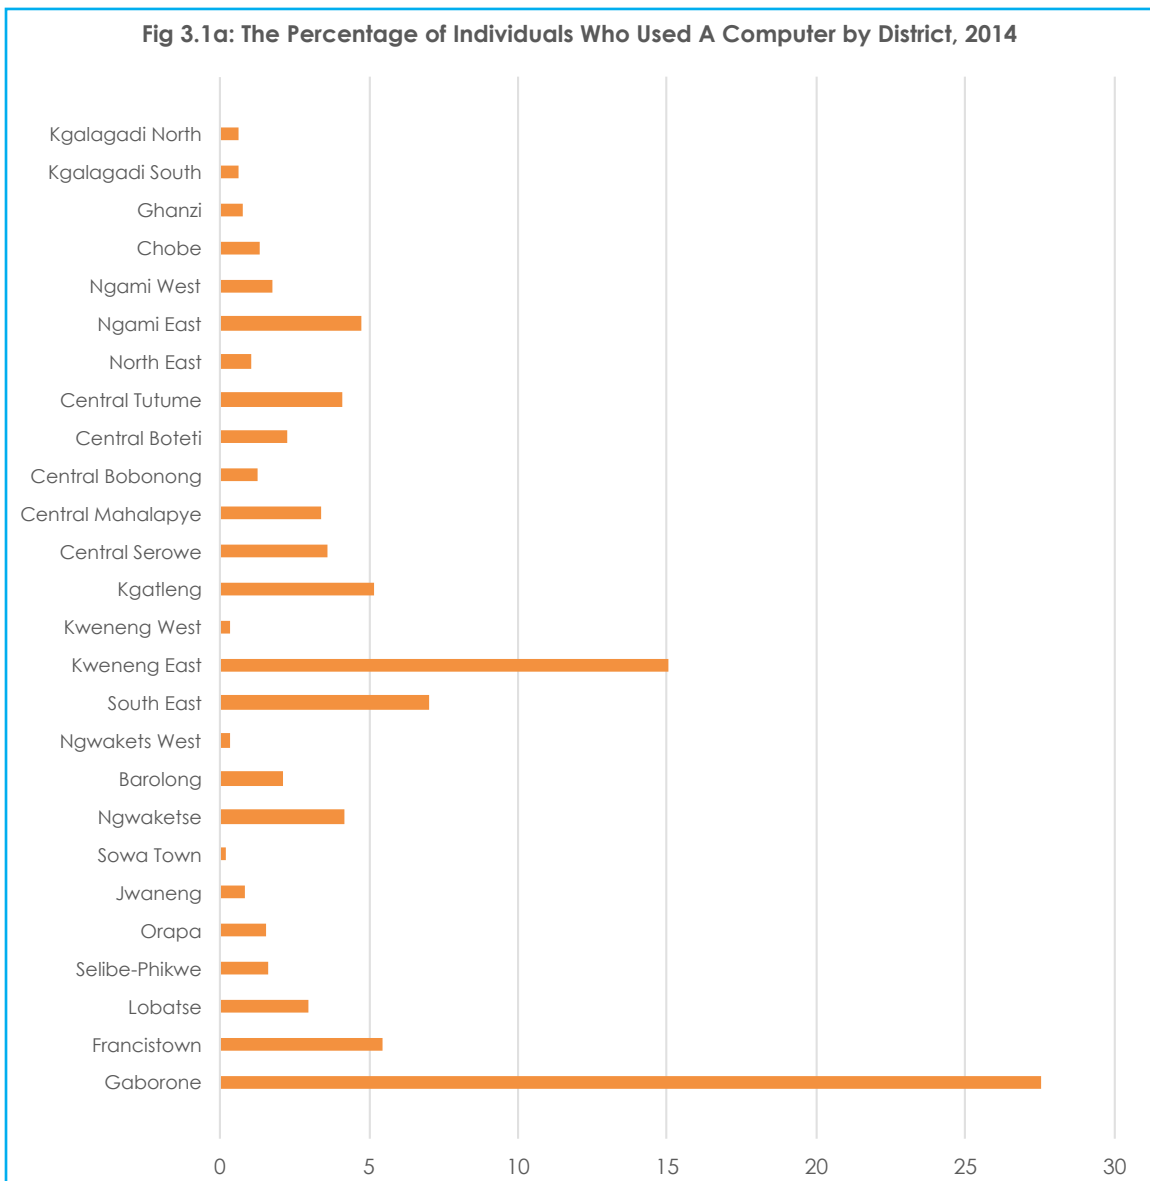

Households were asked to indicate their reasons for not having access to internet. Several reasons were given with the most common being lack of knowledge (i.e. not knowing what internet was and its existence), indicated by 35.8 percent of all households with no internet. The second most common reason was lack of skills, given by 20.4 percent of all households with no access to internet. Some households also indicated that internet equipment was too costly (18.9 percent) while some mentioned that they did not need it (16.3 percent). Figure 2.7 below illustrates the percentage of households with no internet and their reasons for that while **Table 9 in Appendix 1** gives detailed information on Households with no access to internet.

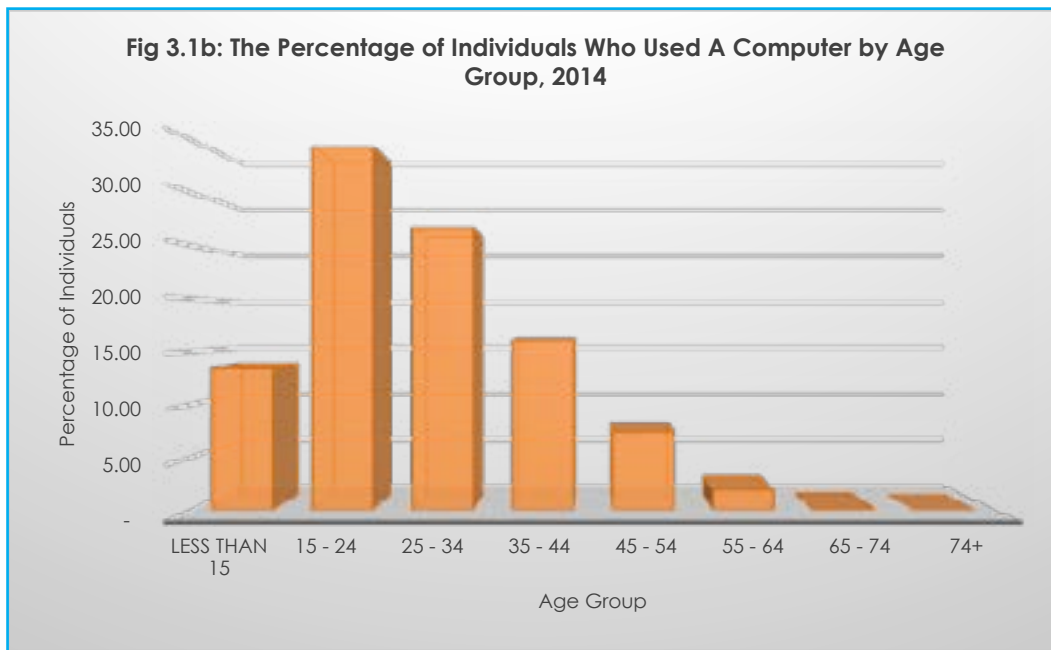

CHAPTER 3: INDIVIDUAL USE OF A COMPUTER

3.1 Chapter Overview

Individuals who used a computer in 2014 amounted to 41.4 percent of the population aged 10 years and over. Of these individuals, 46.8 percent were males while 53.2 percent were females. Individuals mostly used computers at home, 49.0 percent, while a few of them used it in commercial facilities. Computer users were mostly within the age group 15 - 44 years.

The survey revealed that in every district of Botswana, there were computer users. However, the City of Gaborone dominated by having the highest proportion of computer users, it accounted for 27.5 percent. Kweneng East District, which includes some of the most populated villages in Botswana, was next after Gaborone with 15.0 percent of computer users. Ngwaketse West District and Sowa Town had the least proportion of individual computer users.

3.2 Frequency of Individual Computer Use

Of all individuals who used a computer in 2014, 45.4 percent of them used it every day or almost every day. Those who used a computer at least once a week but not every day constituted 31.4 percent of total computer users while those who used it at least once a month but not every week constituted only 6.9 percent. There were also individuals in 2014 who used a computer once in a while, this group constituted 16.3 percent of all computer users. See **Fig 3.2a** below and **Table 1a-d, Appendix 2**.

The City of Gaborone, with 36.7 percent, had the largest proportion of individuals who used a computer every day or almost every day. Kweneng East and South East Districts followed with 15.6 percent and 7.4 percent respectively. The Three Districts (Gaborone, Kweneng East and South East) still dominated in the other categories of computer frequency of use.

Females were the majority users of computers than men in 2014. Of all females who used computers in 2014, 43.3 percent of them used it every day or almost every day while 33.8 percent used it at least once a week but not every day. Male computer users on the other hand, 47.8 percent of them used it every day or almost every day while 28.7 percent of them used it at least once a week but not every day.

Individuals aged 25-34 years followed by those aged 15-24 years and 35-44 years dominated in the use of a computer every day or almost every day. The 25-34 year olds constituted 34.6 percent of individuals who used a computer every day or almost every day while the 15-24 year olds and the 35-44 year olds constituted 24.2 percent and 22.5 percent respectively. This is as shown in **Tables 6 & 7 of Appendix 2**.

Most individuals who used a computer every day or almost every day had tertiary education, they made up 68.0 percent of the total. Individuals with upper secondary education constituted 18.2 percent of those who use computers every day or almost every day.

Individuals with lower secondary education dominated in categories of those who used a computer at least once a week but not every day and at least once a month but not every week. See Table 11 in Appendix 2. Employees Paid In Cash constituted 61.2 percent of all computer users who used it every day or almost every day. These were followed by the Self Employed With Employees at 3.2 percent (**Table 14, Appendix 2**).

With regard to occupations of those who used computers every day or almost every day, Professionals, Services and Sales Workers, Technicians & Associate Professionals and Managers were the main users of computers every day or almost every day. Professionals made up 17.2 percent followed by Services and Sales Workers at 12.3 percent (**Table 17, Appendix 2**).

3.3 Location of Individual Computer Use

The 2014 ICT household Survey revealed that of all the individuals who used computers in 2014, 49.1 percent of them used it at home. A significant proportion of individuals also used computers at work and places of education; 36.0 percent of computer users used computers at work while 34.7 percent used computers at their places of education. The survey also revealed that there were also some who used computers at other people's homes, at community and commercial facilities.

Gaborone, Kweneng East and South East were shown as the Districts where most people use their computers at home. Gaborone had 64.2 percent of its computer users using them at home, 43.1 percent at work, 30.8 percent at a place of their education, 11.0 percent at other people's homes, 7.7 percent at commercial facilities and 2.3 percent at community facilities. In Kweneng East District, the majority of computer users (54.1 percent) preferred to use them at home followed by those using them at their places of education (42.5 percent). As was the case with the previous two locations, South East District individuals who used computers at home dominated (55.9 percent) followed by those who use them at work (37.3 percent). This is as shown in **Table 2, Appendix 2**.

Of all males who used computers, 54.6 percent of them used them at home while 35.8 percent used them at work. With females, 44.1 percent of them used computers at home while 36.2 percent and 37.7 percent used them at work and place of education respectively.

Individuals aged 15-24 years were shown as the most users of computers as compared to other age groups. In this age group, 56.7 percent of them used computers at their place of education, 45.3 percent at home, 17.6 percent at another person's home, 12.3 percent at commercial facilities, 8.6 percent at work and 7.5 percent at a community facilities. See **Tables 4 & 5, Appendix 2**.

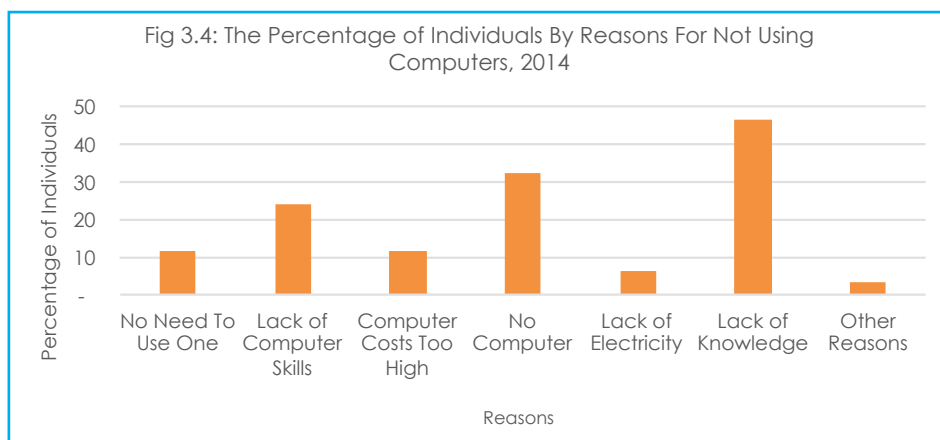

With respect to education of computer users and their location of computer use, the survey revealed that individuals with tertiary education and those with Upper Secondary education used computers mainly in their homes and their work places. Individuals with Primary or Lower education and those with Lower Secondary education mostly used computers at home and their education facilities (**Table 10 Appendix 2**)

Individual use of computers at all locations (at home, work, education facilities, another person's home, commercial and community facilities) were dominated by employees paid in cash. The Self-employed with employees used computers mainly in their homes and at work while the self-employed with no employees used computers in their homes, another person's home and at work. See **Table 13 Appendix 2**.

3.4 Reasons for Individuals Not Using a Computer

Individuals who did not use a computer in 2014 constituted 58.6 percent of total population aged 10 years and above. There were several reasons which were given for not using a computer in 2014. Lack of knowledge, Unavailability of Computers and Lack of Computer Skills were the common reasons for some individuals not having used computers in 2014.

Reasons of Lack of knowledge, Unavailability of Computers and Lack of Computer Skills were mainly given by individuals aged 10 years to 54 years. Individuals who sighted lack of knowledge for not using computers were mainly those with primary or lower education followed by those with lower secondary education. Lack of computer skills was given mainly by those with lower secondary education followed by those with primary or lower education. See **Tables 3, 8, 9, 12, 15** and **18** in **Appendix 2**.

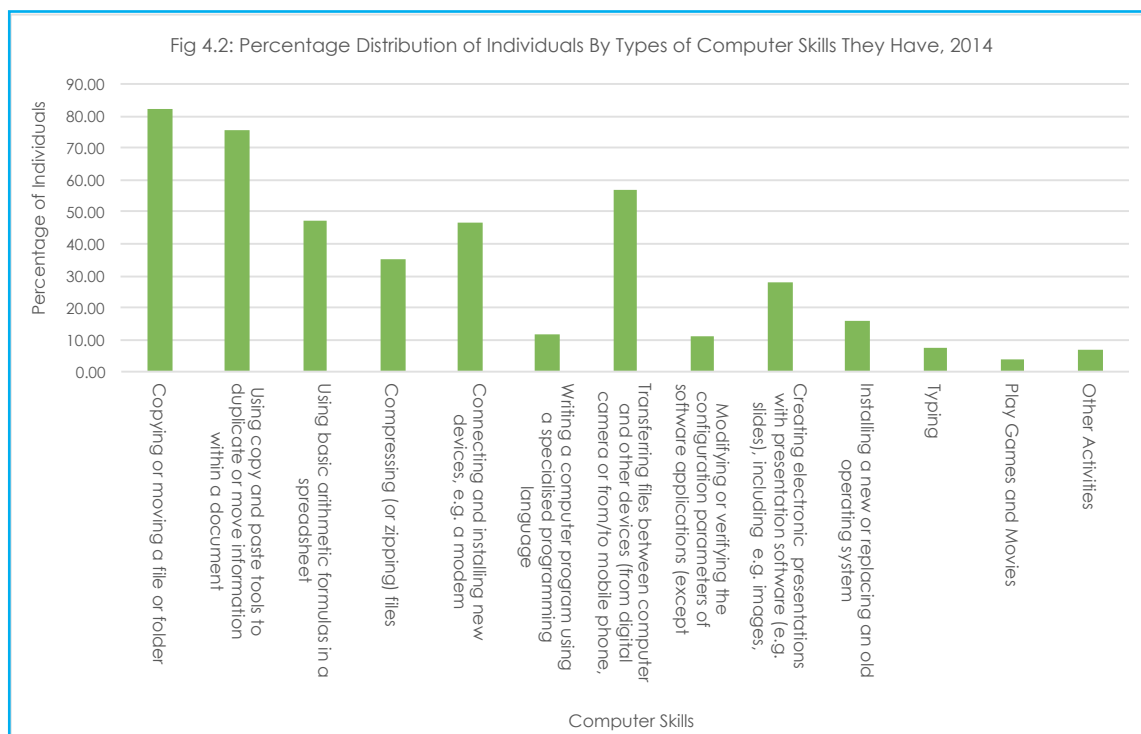

CHAPTER 4: INDIVIDUAL E-SKILLS

4.1 Chapter Overview

The 2014 ICT Household Survey revealed that of all individuals in Botswana aged 10 years and above in 2014, 41.4 percent of them had e-skills while the rest did not have. Females made up 57.6 percent of all individuals who had e-skills in 2014. Individuals with e-skills were mostly of ages 10-54 years. Tertiary educated individuals followed by those with lower and secondary education made up the largest proportion of individuals with e-skills in 2014. Individuals with e-skills in 2014 were mostly employees paid in cash; few of employees paid in kind had e-skills.

4.2 Computer Related Skills Possessed by Individuals

Individuals who stated that they were able to use computers were assessed to find out the types of computer skills they possess; they were asked questions on their ability to perform simple to complicated computer procedures. The survey showed that 82.1 percent of all individuals with e-skills could copy or move files; 75.5 percent could use copy and paste tools to duplicate or move information within a document; 57.0 percent could transfer files between computer and other devices; 47.5 percent could use basic arithmetic formulae in spreadsheets; 46.5 percent could connect and install new devices. This is shown in **Fig 4.2** below and **Table 1** of **Appendix 3**.

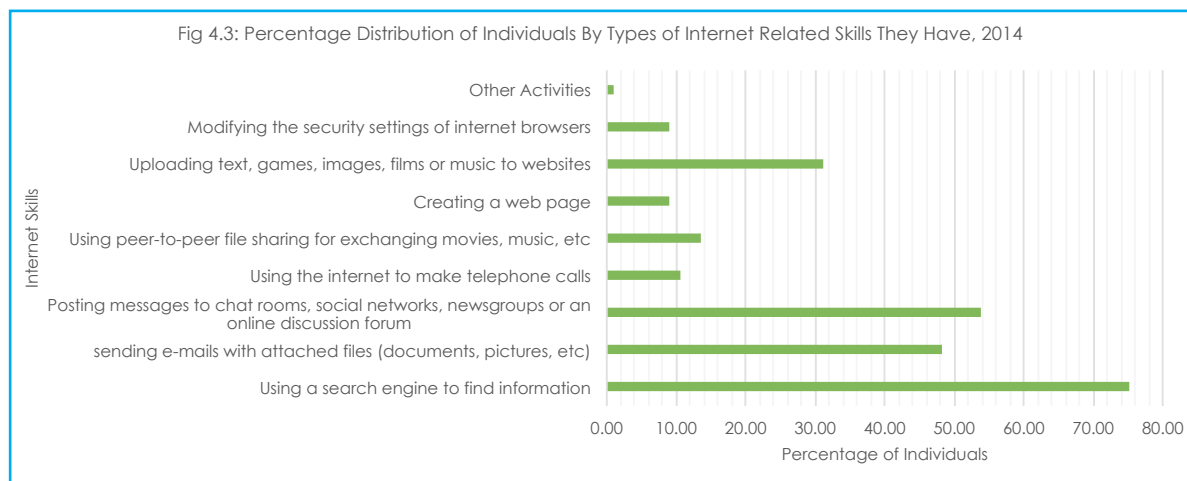

There were some individuals who reported that they were able to do some complicated computer procedures. For example, 11.5 percent of individuals with e-skills said were capable of writing computer programs using specialized programming languages, 15.8 percent said were capable of installing new or replacing operating system, 11.0 percent said were capable of modifying or verifying configuration parameters of software applications. **(Table 7, Appendix 3).**

Individuals aged 10-54 years constituted the largest proportion of individuals with e-skills. The 15-24 year olds dominated in copying and moving files and folders, using copy and paste tools, using arithmetic formulae in the spreadsheet as well as in transferring files between the computer and other devices. The 25-34 year olds, on the other hand, dominated in modifying and verifying configuration parameters, creating electronic presentations, installing or replacing operating systems, compressing files, connecting and installing devices and writing computer programs. See Tables 6 & 7 in Appendix 3 for other details.

The survey further showed that the tertiary educated were more skilled in computer related procedures than other individuals of lower education. In addition, individuals who were employees paid in cash were more skilled in using computers than other categories of employees.

4.3 Internet Related Skills Possessed by Individuals

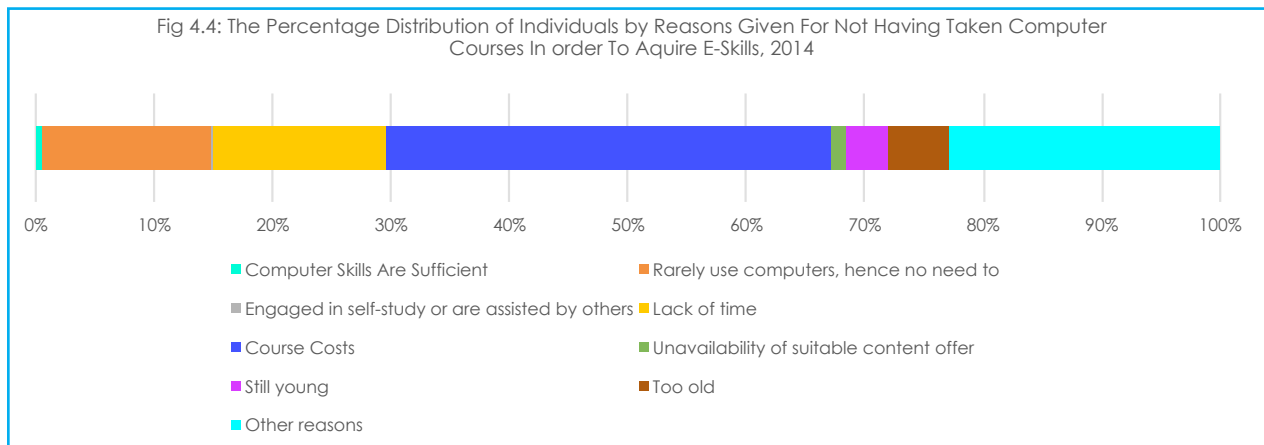

As was done with computer related skills, all individuals with e-skills were interviewed further to find out their internet related skills. The 2014 ICT household survey revealed that of all individuals with e-skills, 75.2 percent of them were able to use search engines to find information in the internet, 48.1 percent were able to send e-mails with attached files or documents, 53.8 percent were capable of pasting messages in online discussion forums and social networks, 31.2 percent were able to upload text, games, images etc. on websites, 13.7 percent were able to use peer-to-peer file sharing for exchanging movies, music etc., 10.7 percent were able to make internet telephone calls, 9.1 percent were able to create websites and 8.9 percent could modify the security setting of internet browsers.

E-Skilled individuals were found all over Botswana. However, most of them resided in Gaborone (27.5 percent), Kweneng East (15.0 percent), South East (7.0 percent) and Francistown (5.4 percent). This is shown in **Table 2, Appendix 3**.

The 2014 ICT Household survey showed that individuals aged 24-34 years followed by those aged 15-24 and 35-44 years had more internet related skills than other aged groups. Individuals aged 25-34 years made up the largest proportion of individuals who are able to send emails with attachments (38.6 percent), make internet telephone calls (34.1 percent), create web pages (42.4 percent) and modify security settings of internet browsers (43.0 percent). Other details are shown in **Tables 8 & 9 of Appendix 3**.

4.4 Reasons For Individuals Not Having E-Skills

As indicated by Figure 4.3 above and **Tables 5, 14, 15, 20, 25 & 30 in Appendix 3**, several reasons were given by individuals for not having taken computer courses in order to have e-skills. Some individuals said they did not take computer courses in 2014 because computer courses are expensive (39.0 percent) while some mentioned lack of time (15.0 percent) as their reasons for not having taken computer courses. Details are shown in tables stated above.

CHAPTER 5: INDIVIDUAL USE OF INTERNET

5.1 Chapter Overview

According to the 2014 ICT Household Survey, 36.7 percent of individuals aged 10 years and over used internet in 2014. Of these individuals, 51.2 percent were females while 48.8 percent were males. The City of Gaborone had the largest proportion of individual internet users, 29.6 percent. Kweneng East and South East Districts were next after Gaborone with 14.9 percent and 6.9 percent respectively. The City of Francistown had 6.0 percent of individual internet users.

The Survey further showed that individual internet users were mainly in the age group 15-24 years (36.8 percent) followed by those aged 25-34 years and 35-44 years, with each constituting 30.8 percent and 17.3 percent respectively.

Internet users with tertiary education constituted the largest proportion on individual internet users, they made up 48.3 percent of all individual internet users. Those with Upper Secondary and Lower secondary education were next making 25.9 percent and 21.4 percent respectively of internet users.

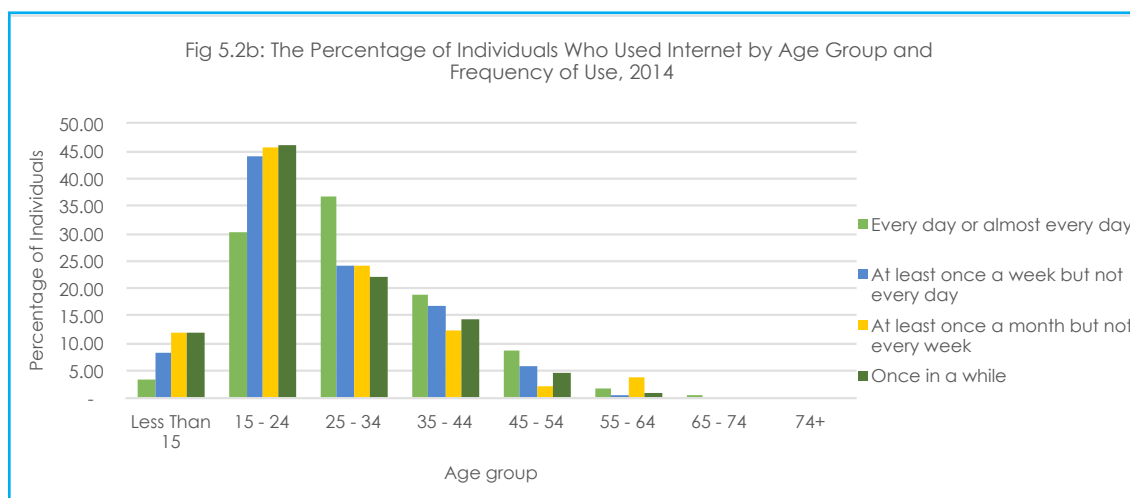

In addition, the survey revealed that individual internet users were mostly employees paid in cash. Services and Sales workers were shown as the main internet users (11.6 percent) followed by Professionals (10.9 percent) and Technicians and Associate Professionals (7.1 percent).

5.2 Frequency of Individual Internet Use

As illustrated by Figure 5.2 above and Table 1 in Appendix 4, individuals who used internet every day or almost every day constituted the majority of all internet users in 2014. They made up 55.3 percent of all individual internet users. At the same time, individuals who used internet at least once a week but not every day made up 25.7 percent of all internet users while those who used internet at least once a month but not every week formed 7.5 percent. Not all individuals used internet frequently, there were those who used it only once in a while, these individuals constituted 11.5 of all internet users.

Categorizing the frequency of internet use by the gender of internet users, the survey revealed that female internet users used internet more frequently than males. Females made up 50.3 percent of individuals who used internet every day or almost every day. They also constituted 52.3 percent of those who the use internet at least once a week but not every day and 54.1 percent of those using internet once in a while. **See Table 7 in Appendix 4** for details.

As indicated by Figure 5.2b above and Tables 6&7 in Appendix 4, individuals aged 15-44 years were the most frequent users of internet. Individuals aged 25-34 years constituted 36.6 percent of internet users who used it every day or almost every day in 2014 as compared to 30.3 percent and 18.9 percent of individuals in age groups 15-24 years and 35-44 years respectively. Individuals aged 15-24 years dominated in the use of internet in the categories of those who used it once a week but not every day, at least once a month but not every week and in the use of internet once in a while.

Individuals who accessed internet every day or almost every day in 2014 were mainly individuals with tertiary education, they made up 64.0 percent of the total. On the same note, employees paid in cash used internet more frequently than other employees. Other details are shown in **Tables 17, 22 and 27 of Appendix 4**.

5.3 Location of Internet Use

The 2014 ICT Survey revealed that individuals accessed internet mainly at home (68.3 percent), at work (33.9 percent), at education facilities (19.0 percent) and at commercial facilities like internet cafes (15.7 percent). This is shown in **Table 2, Appendix 4**.

Individuals aged 15-24 who were shown by the survey as the most consumers of internet, used internet mainly at home (68.7 percent) and at their places of education (32.4 percent). The 25-34 year olds on the other hand mainly used internet at home (71.4 percent) and at work (45.2 percent). See details in **Tables 8 & 9 in Appendix 4**.

With respect to the use of internet by location and education of internet users, the survey revealed that all internet users of primary education up to tertiary education mainly used internet at home (**Tables 16, Appendix 4**). The survey also showed that employees and the self-employed used internet mainly at home and work (**Table 21, Appendix 4**).

5.4 Devices Used By Individuals to Access Internet

Mobile cellular telephones (smart phones) were revealed by the 2014 ICT Household Survey as the main devices used by individuals to access internet. Majority of individuals, 77.3 percent, used internet through mobile cellular telephones (smart phones). Portable computers (laptops, notebooks and tablets) were next after mobile cellular telephones as the most favored devices to access internet; 43.0 percent of individuals used portable computers to access internet (**Table 3, Appendix 4**).

Individuals aged 10-54 years mainly used mobile cellular telephones to access internet while 55-74 year olds preferred portable computers to access internet (**Tables 10 & 11, Appendix 4**).

Mobile cellular telephones followed by portable computers were the most favored for internet in all the categories of individual education attainment levels (**Table 18, Appendix 4**). This scenario continued with all categories of employees and the self-employed, see **Table 23, Appendix 4**.

5.5 Individual Internet Activities

According to the 2014 ICT Household Survey, individual internet users engaged in different types of activities in the internet. The most activity among internet users was participating in social networks. Individuals who engaged in this activity constituted 78.4 percent of all internet users. The second most common activity of internet users was reading or downloading online news/newspapers/magazines/electronic books; it was done by 56.6 percent of all internet users. Some individuals, 50.8 percent, used internet to send or receive emails while some (49.6 percent) used it to look for educational or training information. **Figure 5.5** below and **Table 4 in Appendix 4** shows other information relating to activities done through the internet.

Individuals aged 15-44 years, the most internet users, dominated in all activities done through the internet. Individuals aged 15-24 years made up 41.7 percent of those participating in social networks compared with 34.4 percent of those aged 25-34 years and 14.9 percent of those aged 35-44 years.

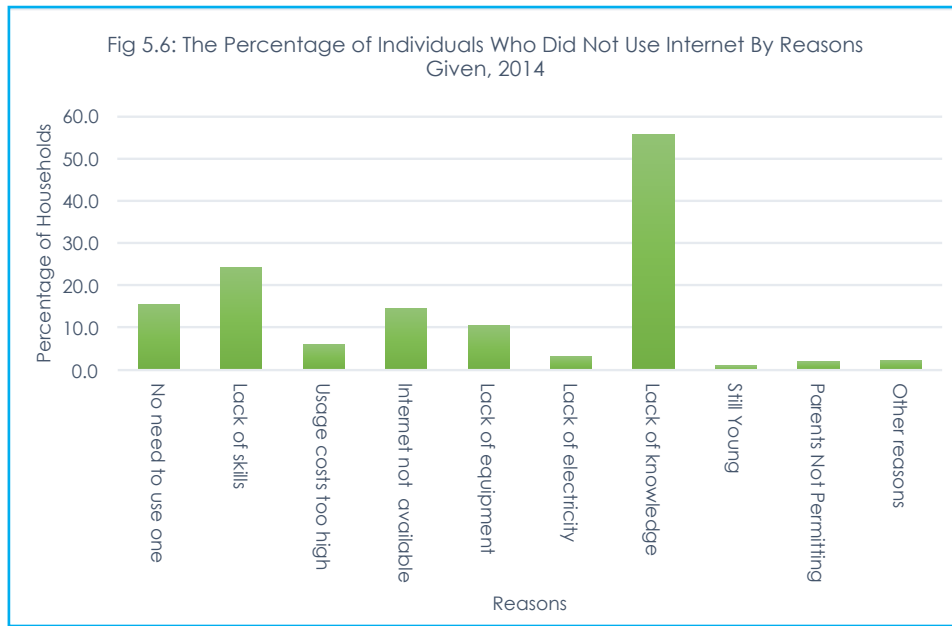

Fig 5.5: The Percentage of Individual Internet Users by Activities Done Through The Internet, 2014

In the next common activity, reading or downloading online news/newspapers/magazines/electronic books; 25-34 year olds made up 35.3 percent of internet users engaged in it while 15-24 year olds constituted 30.0 percent. With regard to sending emails through the internet, individuals aged 25-34 years made up 36.2 percent of internet users engaged in this activity while 15-24 and 35-44 year olds made up 25.9 percent and 22.7 percent respectively. This is shown in Tables 12 & 13 of Appendix 4. Details relating to internet activities by educational attainment, employment status and occupation of internet users are shown in **Tables 18, 19, 24 and 29** of **Appendix 4**.

5.6 Reasons for Individuals Not Using Internet

The 2014 ICT Household Survey revealed several reasons for individuals having not used internet in 2014. Lack of knowledge was sighted by most individuals as a hindrance to internet use. A total of 471,960 (55.5 percent) individuals out of 850,038 gave this reason as the main one why they did not use internet in 2014. Lack of skills and No need to use internet were also among the common reasons for not using internet; 24.2 percent of individuals who did not use internet sighted lack of skills as the cause of not using internet while 15.5 percent said they did not need to use internet. Figure 5.6 below illustrates the percentage of individuals who did not use internet in 2014 by reasons they gave. **Table 5** in **Appendix 4** also shows individual reasons for not using internet in 2014 by their geographical location.

Lack of knowledge of internet, the main reason for not using internet, was mostly given by women (59.1 percent), less than 15 year olds (18.7 percent), 35-44 year olds (16.0 percent), primary or lower education individuals (46.1 percent), employees paid in cash (29.5 percent) and those within elementary occupations (16.3 percent). This is shown in **Tables 14, 15, 20, 25** and 30 in **Appendix 4**.

CHAPTER 6: INDIVIDUAL USE OF E-COMMERCE

6.1 Chapter Overview

Electronic Commerce (E-Commerce) or Electronic Business (E-Business) as is sometimes called, is still very small in Botswana. Of individuals aged 10 years and over, only 4.6 percent of them in Botswana used E-commerce in 2014. Males constituted 53.2 percent of all individuals who used e-commerce in 2014 while females constituted 46.8 percent.

The most popular purchases through e-commerce in 2014 were purchasing of Clothes and Sports Goods (32.3 percent), Books and Magazines (20.4 percent), Household Goods (19.5 percent) and Electronic Equipment (18.4 percent). Refer to **Table 1** of **Appendix 5**.

Good purchased through e-commerce were mainly sourced from sellers in other SADC countries followed by sellers in European and American countries (**Table 3, Appendix 5**).

Individuals aged 35-44 years were shown to be the largest consumers of e-commerce in 2014. They constituted 38.3 percent of all e-commerce users. Next on the hierarchy of e-commerce users were individuals aged 25-34 years followed by those aged 45-54 years. All this is shown in **Tables 5 & 6** of **Appendix 5**.

Tertiary educated individuals used more e-commerce than other categories in 2014, they made up 78.7 percent of all e-commerce users. Employees paid in cash constituted the largest proportion of e-commerce users, making 70.1 percent of the total. With respect to occupations of e-commerce users, professionals followed by managers and services 7 sales workers used more e-commerce than other categories of occupations. See **Tables 13, 17 & 21** in **Appendix 5**.

6.2 Goods and Services Purchased Through E-Commerce

Clothes and Sports Goods followed by Books and Magazines, Household Goods and Electronic Equipment were shown by the survey as the most purchased through e-commerce in 2014. Of all individuals who purchased Clothes and Sports Goods online, 58.1 percent of them resided in Gaborone and 12.6 percent lived in Francistown. Individuals who bought Books and Magazines were mostly in Gaborone (64.1 percent) and Kweneng East (11.8 percent) while those who bought Household Goods were in Gaborone (38.0 percent) and Francistown (17.9 percent). Electronic Equipment purchasers were mainly in Gaborone (76.1 percent). See **Table 1, Appendix 5**.

Of all individuals who purchased Clothes and Sports Goods online, 64.0 percent of them were females and 36.0 percent were males. Composition of those who purchased Books and Magazines shows that 82.1 percent of them were males while 17.9 percent were females. Males also dominated in the purchase of Electronic Equipment. Refer to **Table 5, Appendix 5**.

Individuals aged 25-34 years made up 42.2 percent of all individuals who purchased Clothes and Sports Goods while those aged 35-44 years formed 36.4 percent of the total in 2014. The survey showed that individuals who purchased Food or Groceries through e-commerce were mainly aged 35-44 years, at 60.2

percent. The same age group also dominated in the purchasing of Medicine, Vehicle Parts, Shares, Insurance Policies and Other Financial Services and E-learning Materials. See **Table 6** in **Appendix 5**.

Individuals who constituted the largest proportion of individuals who used e-commerce were those with tertiary education. Looking at the type of goods and services bought by this group, the 2014 ICT household survey showed that Clothes and Sports Goods made up the largest proportion (36.7 percent) of goods or services bought by this group. The tertiary educated individuals also bought Books and Magazines (23.7 percent) and Household Goods (20.1 percent). This is shown in **Table 13** of **Appendix 5**.

6.3 Countries of Origin of Goods and Services Purchased

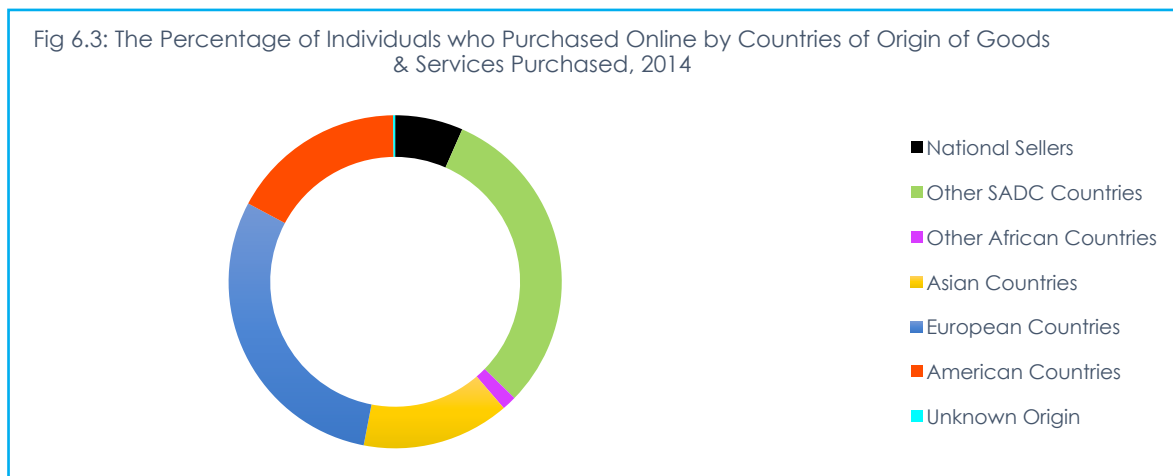

Goods and services purchased through E-Commerce in 2014 were mainly from SADC, European, American and Asian countries. E-Commerce purchases from other SADC countries constituted 37.1 percent of total e-commerce purchases while those of European countries origin formed 36.0 percent of the total. Goods and services bought from American and Asian countries made up 20.6 percent and 17.3 percent respectively. See **Table 3** of **Appendix 5**.

Males mainly sourced their goods and services from Europe (46.0 percent), SADC (31.3 percent), America (25.2 percent) and Asia (19.0 percent). Females on the other hand preferred goods and services from other SADC countries (43.7 percent) followed by Europe (24.5 percent) and Asia (15.5 percent). This is as shown in **Table 10** of **Appendix 5**.

Individuals aged 15-24 years purchased from Europe, SADC, America and Asia only. The 25-34 year olds mostly bought from other SADC, American, European and Asian countries. Details of individual purchases by age and country of origin are shown in **Tables 9 & 10** of **Appendix 5**.

Individuals who used e-commerce were mainly employees paid in cash. These individuals, sourced their goods and services mainly from Europe (41.1 percent) followed by other SADC countries.

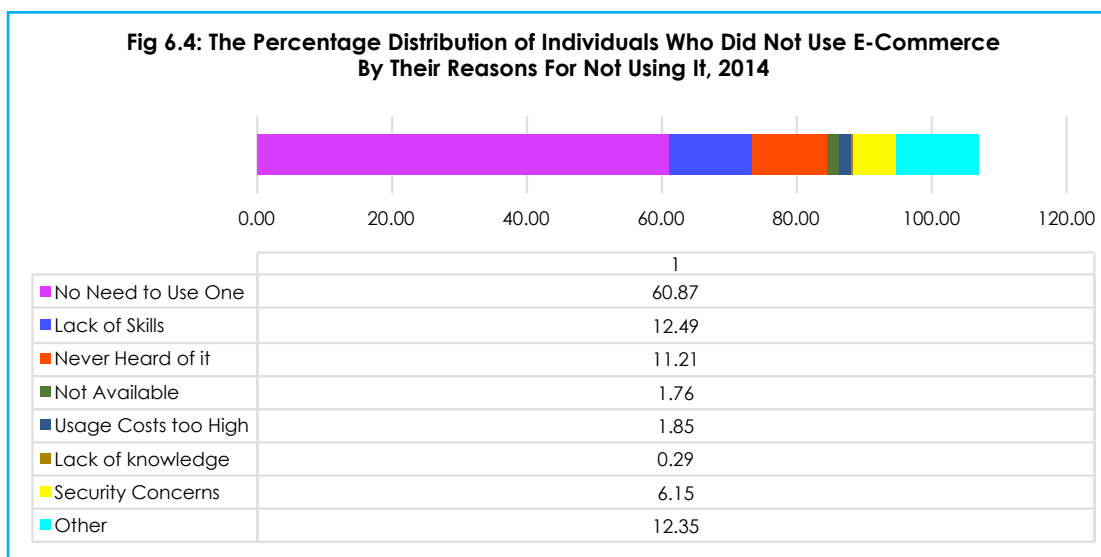

Other Details are shown in **Table 19** of **Appendix 5**.

6.4 Reasons for Individuals Not Using E-Commerce

Individuals who did not use E-Commerce constituted 32.2 percent of all individuals who used internet. Of these individuals, 60.9 percent of them said they did not use e-commerce because there was no need for them to use it. Females constituted 52.9 percent of this group which said there was no need for them to use e-commerce. Still in this group, those who said there was no need for them to use e-commerce, 15-24 year olds made up 42.9 percent while 25-34 year olds made up 29.6 percent of the total.

Other reasons given for not using e-commerce are as shown in **Tables 4, 12, 16, 20 & 24** in **Appendix 5**.

CHAPTER 7: INDIVIDUAL USE OF E-GOVERNMENT

7.1 Chapter Overview

Of all individuals aged 10 years and over, 7.5 percent of them said they used e-government in 2014. This was revealed by the 2014 ICT Household Survey. Out of all individuals who used e-government in 2014, 54.8 percent were males while 45.2 percent were females. Gaborone followed by Kweneng East District had the highest proportion of individuals who used e-government; Gaborone had 36.3 percent while Kweneng East District had 16.7 percent. See **Table 1** in **Appendix 6**.

The majority of individuals who used e-government in 2014 were within the 15-54 age group. The 25-34 years old made up 40.9 percent of e-government users while the 35-44 years made up 22.0 percent. The 15-24 years and 45-54 years age groups, who also used e-government, made up 20.9 percent and 13.8 percent respectively. Details are shown in **Tables 3 & 4** of **Appendix 6**.

Individuals with upper secondary and tertiary education made up the majority of individuals who used e-government in 2014 (Table 7 in Appendix 6). The survey further showed that managers, professionals, technicians, clerical support services and services and sales workers were the main consumers of e-government. This is shown in **Table 11** of **Appendix 6**.

7.2 Individual E-Government Activities

Individuals who used e-government in 2014 were shown by the survey to be mainly obtaining information from public authorities' websites. This group made up 80.1 percent of all those who used e-government. Individuals also used e-government to download official forms (56.1 percent) and also to send completed forms (29.7 percent). See **Table 1** in **Appendix 6**.

Of all individuals who used e-government to obtain information from public authorities' websites in 2014, 33.4 percent of them lived in Gaborone while 19.2 percent of them lived in Kweneng East District. Furthermore, males constituted 55.5 percent of individuals who used e-government to obtain information from public authorities' websites while females made up 44.5 percent. Individuals aged 15-54 years made up the majority of those who obtained information from public authorities' websites. The age-group 25-34 years made up 40.1 percent while 15-24 years and 35-44 years made up 22.5 percent and 20.6 percent respectively. In addition, individuals with tertiary education made up the majority of those who used e-government to obtain information from public authorities' websites in 2014, they made up 68.9 percent of the total. Detail are as shown in **Tables 3-7** in **Appendix 6**.

Downloading of official forms and sending completed forms were other activities done through e-government. Males made up 54.6 percent of those who downloaded official forms and 60.6 percent of those who used e-government to send completed official forms. In addition, the 25-34 year olds made up 42.7 percent and 45.9 percent of those who downloaded official forms and those who sent completed official forms respectively.

7.3 Reasons for Individuals Not Using E-Government

Individuals who did not use e-government made up 29.2 percent of all individuals aged 10 years and over and 79.5 percent of those who used internet. Several reasons were given for not using e-government. The main ones were that individuals did not have to submit official forms at all and individuals have not heard of e-government. Individuals who stated that they did not have to submit official forms at all made up 62.0 percent of the total while those who said they had not heard of e-government made up 25.1 percent.

Females made up the majority of all individuals who did not use e-government, constituting 52.8 percent.

CHAPTER 8: INDIVIDUAL USE OF A MOBILE CELLULAR TELEPHONE

8.1 Chapter Overview

According to the 2014 ICT Household Survey, 85.3 percent of individuals aged 10 years and over used a mobile cellular telephone in 2014. Of this proportion, 55.8 percent were females while 44.2 percent were males. The City of Gaborone followed by Kweneng East had the largest proportion of individuals who used a mobile cellular telephone in 2014; Gaborone had 17.5 percent of total individual mobile cellular users while Kweneng East had 14.6 percent of the total. This is as shown in **Tables 1&3** in **Appendix 7**.

The survey further showed that individuals aged 15-54 years were the most users of mobile cellular telephones. Individuals within the age group 25-34 years constituted 26.5 percent of total mobile users while those within 15-24 years made up 23.9 percent of the total. These were followed with age groups 35-44 years and 45-54 years with 20.1 percent and 11.4 percent of the total respectively. See Table 4 in Appendix 7 for other details. Individuals with educational attainment of lower secondary followed by those with tertiary and primary or lower education were the most users of mobile cellular telephones. Individuals with lower secondary education made up 30.7 percent of mobile cellular telephone users while those with tertiary education constituted 23.9 percent of the total. Details are shown in **Table 7** of **Appendix 7**.

Employees paid in cash formed 41.0 percent of all individual mobile cellular telephone users (**Table 9, Appendix 7**). Furthermore, individuals of elementary occupations and services and sales workers constituted the largest proportion of individual mobile cellular telephone users (**Table 11, Appendix 7**).

8.2 Individual Mobile Cellular Telephone Activities

The Survey asked individuals to state all the activities they did with the mobile cellular telephone. Their response showed that most of them used mobile cellular telephones for communicating/chatting (98.2 percent), sending and receiving short messages (83.6 percent) and playing radio/music/video downloads (50.9 percent). This is as illustrated by **Figure 8.2** below and **Table 1** in **Appendix 7**.

Gaborone had the largest proportion of individuals who used mobile cellular telephones as compared to other districts. The majority of individuals who resided in Gaborone used their mobile cellular telephones for communicating/chatting (97.9 percent), sending or receiving short messages (94.9 percent), taking pictures/videos (62.3 percent), playing radio/music/video downloads (61.2 percent) and surfing the internet and engaging in social networks (56.2). In Kweneng East, individuals mostly communicated/chatted and send or receive short messages with their mobile cellular telephones.

Fig 8.2: The Percentage of Individuals Who Used A Mobile Cellular Telephone by Activities Done, 2014

Looking at the activities done through mobile cellular telephones with respect to the gender of individual users, the survey shows that both males and females mainly use mobile cellular telephones for communicating/ chatting , sending and receiving short messages, playing radio/music/video downloads and taking pictures/ video.

Except for mobile banking and paying bills/buying utilities through a mobile cellular telephone, females dominated in using their telephones to do most activities. See **Tables 3 & 4** in **Appendix 7**. In using mobile celllar telephones for communicating/chatting, females made up 55.8 percent of total mobile cellular telephone users while in sending/receiving short messages they made up 55.4 percent of the total.

The majority of females, 98.3 percent and 83.1 percent, used their mobile cellular telephones for communicating/chatting and sending/receiving short messages. The same activities were shown as the most done through mobile cellular telephones by males.

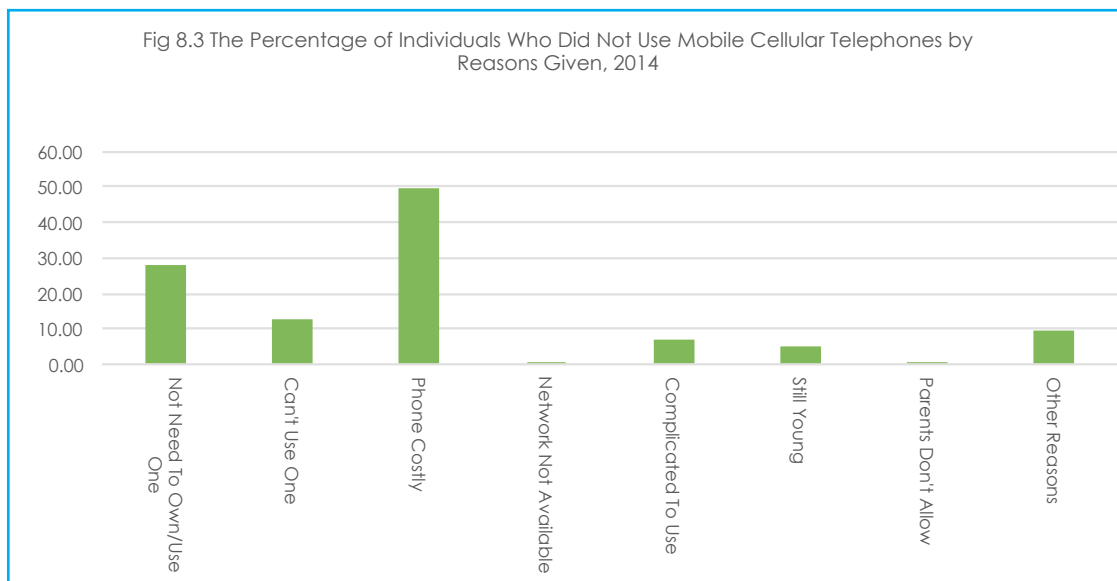

Individuals aged 15 years to 44 years were shown to be the most mobile cellular telephone users in 2014. The 15-24 year olds, as does the 25-34 year olds and the 35-44 year olds, mainly use their mobiles for communicating/ chatting followed by sending/receiving short messages and playing radio/music/video downloads. In addition to these activities, these age groups also like taking pictures/videos and surfing internet and social networks through their mobile cellular telephones. Details of this are as shown in **Tables 3&4** in **Appendix 7**.

Of all individuals who communicated/chatted with their mobile cellular telephones, 30.7 percent of them had lower secondary education, 24.1 percent had tertiary education, 19.7 percent had primary or lower education and 16.9 percent had upper secondary education. Tertiary educated individuals dominated in the use of mobile cellular telephones for sending/receiving emails (70.7 percent), paying bills/buying utilities (74.4 percent), mobile banking (68.2 percent), sending/receiving money (65.0 percent) and in surfing the internet (51.9 percent). See **Table 7** of **Appendix 7**.

8.3 Reasons for Individuals Not Using Mobile Cellular Telephones

Mobile cellular telephones being costly followed by No need to use mobile cellular telephones and individuals not being able to use mobile cellular telephones were given as the main reasons why some individuals did not use mobile cellular telephones in 2014. See **Table 2** of **Appendix 7**.

Among those who stated that mobile cellular telephones were costly, 41.4 percent of them were aged less than 15 years, 18.7 percent were aged 15-24 years, 10.6 percent aged 25-34 years, 8.7 percent aged 65-74 years. Individuals aged below 15 years constituted the majority of individuals who stated that they did not need to use mobile cellular telephones.

CHAPTER 9: INDIVIDUAL USE OF PRINT MEDIA

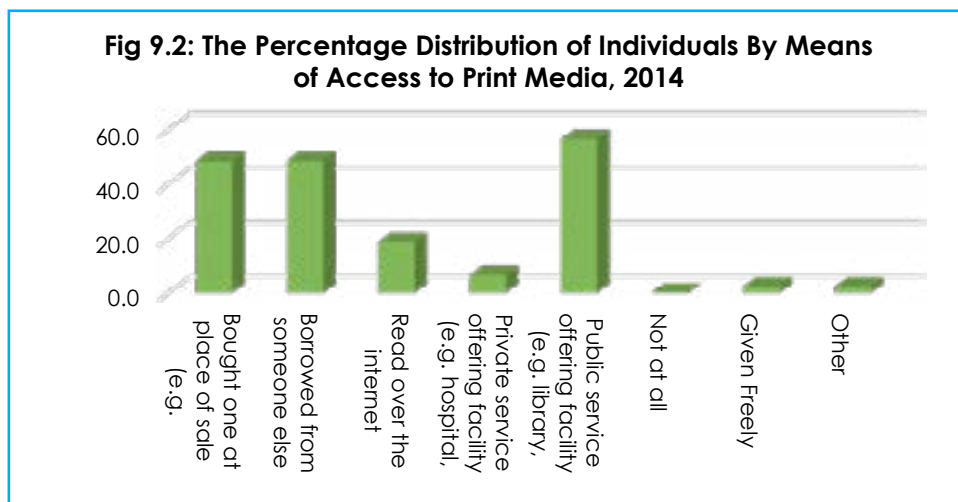

9.1 Chapter Overview

The 2014 ICT Household Survey showed that 76.4 percent of individuals aged 10 years and over read or used Print Media in 2014. The use of Print Media, according to the survey, was across the whole country. Females were revealed as the most users of Print Media, they made up 55.9 percent of all users. Individuals aged 10 years to 54 years were shown as the most consumers of Print Media in 2014. See **Tables 1 & 8** in **Appendix 8** for details.

Individuals with lower secondary education followed by those with tertiary and primary or lower education mostly used Print Media in 2014. Employees paid in cash were shown as the most consumers of Print Media, they made up 40.8 percent of all users. Details are as shown in **Tables 19, 25 & 31** in **Appendix 8**.

9.2 Means of Access to Print Media

Most individuals (56.5 percent) accessed Print Media through public facilities like offices, library or schools. There were some individuals who directly bought Print Media in order to use it (48.3 percent) and also some who borrowed Print Media from others (48.5 percent). This is shown in **Tables 1, 7, 8, 19, 25, & 31** in **Appendix 8**.

9.3 Frequency of Individual Use of Print Media

In 2014, 31.6 percent of individuals aged 10 years and over used print media every day or almost every day. Individuals who used print media at least once a week but not every day made up 33.5 percent while those who used print media at least once a month but not every week made up 8.5 percent. There were also individuals who stated that they used print media once in a while, this group made up 26.0 percent of the total. See **Table 2, Appendix 8**.

Individuals who used print media every day or almost every day were mostly females (50.6 percent) and mostly aged 15-54 years. The 25-34 year olds made up 32.1 percent of individuals who used print media every day or almost every day while those aged 35-44 years made up 23.9 percent of the total. Other details are shown in **Tables 9 & 10 of Appendix 8.**

Individuals with tertiary education followed by those with lower secondary and those with upper secondary education used print media every day or almost every day. Individuals with tertiary education constituted 45.8 percent while those with lower and upper secondary education made up 23.2 percent and 20.3 percent respectively. See **Table 20, Appendix 8.**

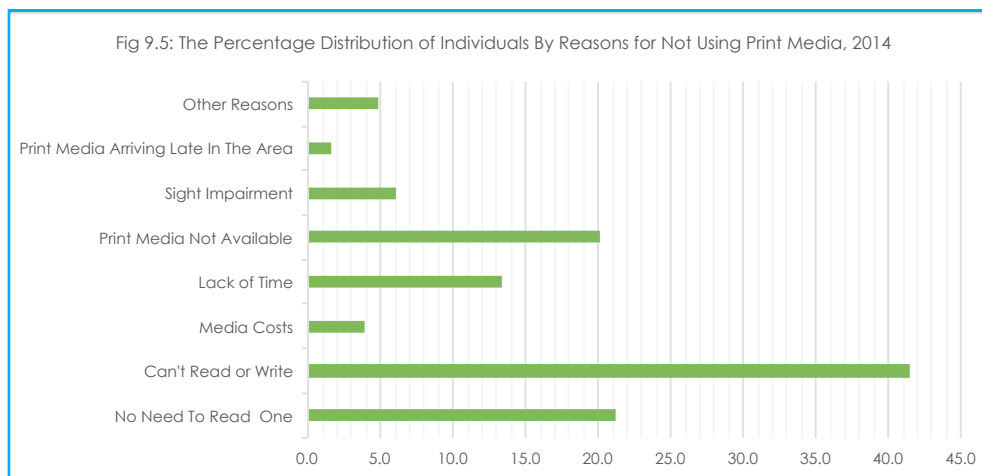

9.4 Print Media Readership

Public and private newspapers were shown as the most consumed by individual users of print media. Individual users of public newspapers made up 86.9 percent of the total while those of private newspapers made up 64.8 percent of the total. **Tables 3 - 35 in Appendix 8.**

Print media readership was spread across all age groups in 2014 even though the 15-44 year olds dominated. The 25-34 year olds made up 28.7 percent of public newspapers consumers while the 15-24 year olds made up 25.4 percent of the total. On the same note, the 25-34 year olds made up 31.4 percent of private newspaper consumers while the 15-24 year olds made up 27.1 percent of the total.

9.5 Reasons for Not Reading Print Media

Not all individuals used Print Media in 2014. Several reasons were given to explain the non-usage. Some individuals indicated that they did not use print media because they couldn't read or write, this group made up 41.5 percent of all those who did not use print media. Some indicated that the print media was not available in their areas (20.1 percent) while some said they did not use print media in 2014 because there was no need for them to do it (21.2 percent) Other reasons and details are shown in **Tables 6, 17, 18,**

CHAPTER 10: INDIVIDUAL USE OF A RADIO

10.1 Chapter Overview

The 2014 ICT Household showed that the majority of individuals aged 10 years and over used a radio in 2014. Individuals who used a radio made 86.2 percent of the population. More females than men were shown to have used a radio, they made up 54.1 percent of the total. Refer to **Tables 1, 10 & 11** in **Appendix 9**.

With regard to frequency of individual use of a radio, the majority of individuals indicated that they use it every day or almost every day. The survey further showed that 84.7 percent of individuals used a radio at home. See **Tables 1 & 2** in **Appendix 9**.

The most listened to radio stations were the local radio stations, with at most 83.0 percent of listenership. Radio programmes broadcasted in Setswana were the most listened to. Ninety-one point eight percent (91.8%) of individuals preferred Radio programmes aired in Setswana. News programmes followed by Music and Sports programmes were the most listened to radio programmes. This is shown in **Tables 3, 4 & 8** in **Appendix 9**.

10.2 Frequency of Individual Use of a Radio

According to the 2014 ICT Household Survey, 62.3 percent of individuals aged 10 years and over used a radio every day or almost every day. Individuals who used a radio at least once a week but not every day made up 21.1 percent while those used a radio once in a while made up 14.0 percent of the total. There were also individuals who stated that they used a radio at least once a month but not every week, this group made up 2.7 percent of the total. See **Table 2, Appendix 9**.

Individuals who used a radio every day or almost every day were mostly females (50.5 percent) and mostly aged between 15 years to 54 years. The 25-34 year olds made up 27.7 percent of individuals who used a radio every day or almost every day while those aged 15-24 years made up 22.2 percent of the total. Other details are shown in **Tables 12 & 13** of **Appendix 9**.

Individuals with lower secondary education followed by those with tertiary education and those with primary or lower education used a radio every day or almost every day. Individuals with lower secondary constituted 28.1 percent while those with tertiary and primary or lower education made up 25.8 percent and 21.6 percent respectively. See **Table 29, Appendix 9**.

10.3 Location of Individual Use of a Radio

Most individuals who used a radio used it at home (84.7 percent) or in another person's home (24.9 percent). There were also individuals, according to the survey, who used a radio at work (9.4 percent), in any place with a car or phone radio (3.7 percent), in a private service offering facility (3.4 percent) or at a place of education (2.0 percent). See **Table 1, 11, 12, 28 & 37** in **Appendix 9**.

10.4 Radio Listenership

According to the 2014 ICT Household Survey, individuals 10 years and over mostly prefer listening to local radio stations, especially public radio stations. Foreign radio stations were shown to have radio listenership in Botswana as well, a significant proportion of individuals listened to South African radio stations and a few listened to Namibian and other foreign radio stations. Details are shown in **Tables 3, 14, 15, 30, 39, 48** in **Appendix 9**.

Majority of individuals, 91.8 percent, preferred radio programmes aired in Setswana. News programmes followed by music and sports programmes were the most preferred by radio listeners. More than 50 percent of individuals also listened to religious, cultural, health related and general programmes. This is shown in **Tables 4, 8, 16, 17, 24, 25, 31, 35, 44, 40, 49, & 53** of **Appendix 9**.

Individuals who listened to the radio in 2014 mostly used their home radios; those who used their home radios made up 80.6 percent of the total. A significant proportion of individuals, (40.5 percent) used their mobile cellular telephones to listen to the radio. **Tables 6, 20, 21, 33, 42 & 50** in **Appendix 9** show this.

10.5 Reasons for Not Listening To the Radio

Even though the majority of individuals used a radio in 2014, there were some who did not use a radio. This group made 13.8 percent of the total. Reasons given for not using a radio were several. The most common, which was given by 66.3 percent of individuals who did not use a radio, was that there was no radio to use. The next most common reason was that there was no need to listen to the radio, 14.3 percent of individuals gave this reason. Refer to **Tables 9, 26, 27, 36, 45 & 54** in **Appendix 9**.

CHAPTER 11: INDIVIDUAL USE OF A TELEVISION

11.1 Chapter Overview

According to the 2014 ICT Household Survey, 85.2 percent of individuals 10 years and over used a television in Botswana. Of these individuals, 55.3 percent were females while 44.7 percent were males. Television was used by all across all age groups, all the districts of Botswana, all education level categories and occupations. Refer to **Tables 1-43** in **Appendix 10**.

The survey further showed that individuals mostly used television at home (71.2 percent) and that those who used it used it every day or almost every day (68.1 percent).

The public television was revealed to be the most watched in 2014 (93.0 percent) followed by Digital Satellite Television (DSTV) with 35.9 percent of viewership. Programmes aired in English were the most watched and most individuals watched news, soapies/drama series, movies and sports programmes.

11.2 Frequency of Individual Use of a Television

In 2014, 68.1 percent of individuals aged 10 years and over used a television every day or almost every day. Individuals who used a television at least once a week but not every day made up 15.0 percent while those who used a television at least once a month but not every week made up 2.9 percent. There were also individuals who stated that they used television once in a while, this group made up 13.9 percent of the total. See **Table 2, Appendix 10**.

Individuals who used a television every day or almost every day were mostly females (56.0 percent) and cut across all age groups. The 25-34 year olds made up 25.2 percent of individuals who used a television every day or almost every day while those aged 15-24 years made up 23.0 percent of the total. Other details are shown in **Tables 10 & 11** of **Appendix 10**.

Individuals with tertiary education followed by those with lower secondary and those with primary or lower education used a television every day or almost every day. Individuals with tertiary education constituted 29.8 percent while those with lower secondary and primary or lower education made up 27.4 percent and 20.3 percent respectively. See **Table 23, Appendix 10**.

11.3 Location of Individual Use of A Television

According to the survey, television was mostly used at home (71.2 percent). There were also a significant portion of individuals who used television at another person's home (38.6 percent), in a private service offering facility (6.5 percent), or at work (4.6 percent), See **Table 1, 8, 9, 22, 30 & 37** in **Appendix 10**.

11.4 Television Viewership

The 2014 ICT Household Survey showed that individuals aged 10 years and over mostly prefer watching a public television. Foreign television stations were shown to have viewership in Botswana as well, a significant proportion of individuals watched DSTV and some SABC. Details are shown in [Tables 3, 12, 13, 24, 32 & 39 in Appendix 10](#)

Of all individuals who watched television in 2014, 70.4 percent said they preferred watching programmes aired in English while 87.0 percent said they preferred those aired in Setswana. News programmes followed by soaps/drama series, sports and movies programmes were the most preferred by television watchers. More than 50 percent of individuals also watched religious, cultural, agricultural/environmental, health related and general programmes This is shown in [Tables 4, 6, 14, 15, 18, 19, 25, 28, 33, 35, 40 & 42 of Appendix 10](#).

11.5 Reasons for Not Watching Television

Even though the majority of individuals used a television in 2014, there were some who did not use it. This group made 14.8 percent of the total. Reasons given for not using a television were several. The most common, which was given by 59.2 percent of individuals who did not use a television, was that buying television was costly. The next most common reason was that there was no electricity, 44.5 percent of individuals gave this reason. Refer to **Tables 7, 20, 21, 29, 36 & 43** in **Appendix 10**.

CHAPTER 12: SURVEY METHODOLOGY

12.1 Overview

In order to fill the gap in ICT household statistics, the 2014 ICT Household Survey was conducted for the first time in 2014. The survey covered the whole country and collected data from selected households and individuals aged 10 years and over.

12.2 Survey Questionnaires

Questionnaires were the primary recording documents of the survey. The 2014 ICT survey consisted of two questionnaires, namely

1. The Household Questionnaire
2. The Individual Questionnaire

12.3 Survey Methodology

The summary of the methodology employed in the 2014 ICT Household Survey is outlined below.

Target Population:

1. Usual members of the household aged 10 years and above

Scope and Coverage:

1. Private dwellings only
2. Institutional dwellings, Ngamiland Delta, CKGR and Industrial Areas were not in the scope of the survey

Sampling Frame:

1. 2011 Population and Housing Census EAs were used as a sampling frame for the survey

Sample Design:

2. A stratified two-stage probability sampling design was used.
3. First Stage was the selection of EAs as Primary Sampling Units (PSUs) with probability proportional to size (PPS) where measure of size (MOS) is the number of households (HHLDS) in the EA as defined in the 2011 Population & Housing Census
4. At Second Stage, HHLDS as Secondary Sampling Units (SSUs) were systematically selected from a listing of HHLDS in the selected EAs (PSUs).
5. The cluster size, which is the number of household enumerated per each enumeration area used was $m=20$.

6. Inter Correlation Coefficient (ICC) = (DEFF - 1) / (m - 1) = (2-1) / (20-1) = 0.053 = 5.3 percent, where m =20, the household size (cluster size) interviewed per EA.

Sample size:

First stage sampling

The formulae below was used to determine the minimum sample size,

$$n = D \frac{Z_{\alpha}^2 P(1-P)g}{e^2 * h * r}$$

Where:

1. n is estimated sample size for the KEY (rarest) indicator,
2. Z_{α} is value of Z which provides $\alpha/2$ in each tail of normal curve if a 2-tailed test is used or a in one tail if α 1-tailed test is used. If α , the type-I error, is 0.10 then the 2-tailed Z is 1.645 α specifies the probability of declaring a difference to be statistically significant when no real difference exists in the population.
3. P is the predicted or anticipated prevalence (coverage rate) for the key indicator, which is based upon the smallest target group (in terms of its proportion of the total population),
4. e is the margin of error or allowable error to be tolerated (in general 5 percentage points),
5. D is the design effect (a ratio of the expected sampling variance from the sampling design to be used compared to that of a simple random sample of the same size. It is a measure of how much more unreliable the present survey is compared to a simple random sample)
 1. r = the proportion of total population that the smallest group comprises, and
 2. h = the average household size.
 3. g is the factor necessary to raise the sample size n_2 a specific percentage for non-response (for example $g=1/0.9=1.11$ to raise the sample size by 10 percent).
 1. 121 EAs were selected with Probability Proportional to Size (PPS) method where Measure of size (MOS) is the number of households as from the 2011 Population & Housing Census

Sampling procedure for selecting EAs in each stratum:

1. Calculating the sampling interval for each stratum

$$I = \frac{\sum M_i}{n}, \text{ where } \sum M_i \text{ is the size of the stratum (total number of HHLDS) and } n \text{ is the number of EAs to be selected in the stratum}$$

2. Calculating the cumulated size for each EA.
3. Calculating the sampling numbers $R, R + I, R + 2I, \dots, R + (n - 1)I$ where R is the random start number between 1 and I .

1. Comparing sampling number with the cumulated size to determine the selected EAs.

Second stage sampling

2. 2420 HHLDS were drawn systematically from the selected EAs

Systematic selection of HHLDS were done as follows:

1. Calculating the sampling interval

$$I = \frac{M}{m}, \text{ where } M \text{ the total number of occupied HHLDS listed in the stratum and } m \text{ is the number of HHLDS to be selected in the stratum.}$$

2. Calculating the sampling numbers $R, R + I, R + 2I, \dots, R + (m - 1)I$ where R is the random number between 1 and I .

Sampling Weights

There are three components of weighting used:

First Stage weighting (From EA to Stratum Level) – account for varying probability of EA selection. For the EA in the stratum, the first stage weight is determined by:

$$W_{1hi} = \frac{\sum_i M_{hi}}{n_h M_{hi}}$$

Where

W_{1hi} = The first stage weight for i^{th} EA in h^{th} stratum

n_h = The number of EA's selected in h^{th} stratum

M_{hi} = The size of the i^{th} EA in h^{th} stratum

$\sum_i M_{hi}$ = The total size of h^{th} stratum

Second stage weighting (From HHLDS to EA level): obtained by dividing the total occupied HHLDS by the number of selected HHLDS in the EA

$$W_{2hi} = \frac{M_{hi}^o}{m_{hi}}$$

Where

W_{2hi} = second stage weight for i^{th} EA in h^{th} stratum

M_{hi}^o = Total number of listed HHLDS in i^{th} EA in h^{th} stratum

m_{hi} = The number of occupied HHLDS selected for the i^{th} EA in h^{th} stratum

Non Response Adjustment: The non-response adjustment for the i^{th} EA in h^{th} stratum

$$R_{hi} = 1 + \frac{m_{2hi} + m_{4hi}}{m_{1hi} + m_{5hi}}$$

Where

m_{jhi} = Number of occupied HHLDS falling under j^{th} result code in i^{th} EA in h^{th} stratum.

Note:

$$j = \begin{cases} 1, \text{Completed} \\ 2, \text{Non - contact} \\ 4, \text{Re fused} \\ 5, \text{Partly - competed} \end{cases}$$

Thus,

The **final weight** for the i^{th} EA in h^{th} stratum is:

$$W_{hi} = W_{hi} * W_{2hi} * R_{hi}$$

APPENDIX 1:

APPENDIX 11:

**International Telecommunications
Union (ITU) Core Indicators on Access
to, and Use of, ICT by Households &
Individuals**

Table 1: ITU Core Indicators on Access to, and Use of, ICT by Households and Individuals, 2014

Indicator No	Indicator Name	2014
HH1	Proportion of households with a radio	0.59
HH2	Proportion of households with a television	0.60
HH3	Proportion of households with a telephone:	
	A fixed telephone	0.09
	A mobile telephone	0.94
HH4	Proportion of households with a computer	0.32
HH5	Proportion of individuals with a computer	0.41
HH6	Proportion of households with a internet	0.41
HH7	Proportion of individuals with a internet	0.37
HH8	Proportion of individuals using the internet, by location:	
	Home	0.68
	Work	0.34
	Place of education	0.19
	Another person's home	0.10
	Community internet access facility	0.06
	Commercial internet access facility	0.16
	In mobility	0.32

Table 1 cont: ITU Core Indicators on Access to, and Use of, ICT by Households and Individuals, 2014

Indicator No	Indicator Name	2014
HH9	Proportion of individuals using the internet, by type of activity:	
	Getting information about goods or services	0.33
	Seeking health information	0.38
	Getting information from general government organizations	0.21
	Interacting with general government organizations	0.10
	Sending or receiving e-mail	0.51
	Telephoning over the internet/VoIP	0.10
	Participation in social networks	0.78
	Purchasing or ordering goods or services	0.07
	Selling goods or services	0.03
	Using services related to travel or travel-related accomodation	0.07
	Internet banking	0.09
	Doing a formal online course	0.06
	Consulting wikis, online encyclopedias or other websites for formal learning purposes	0.32
	Downloading movies, images, music, watching TV or video, or listening to radio or music	0.30
	Downloading software applications	0.19
	Reading or downloading online newspapers or magazines, electronic books	0.57
	Looking for a job or sending/submitting job application	0.24
	Participating in professional networks	0.10
	Reading and posting opinions on civic or political issues via websites (e.g. blogs, social networks, etc.)	0.19
	Taking part in online consultations or voting to define civic or political issues	0.05
	Looking for information related to education, training or course offers	0.50
	Playing or downloading video games or computer games	0.45

Table 1 cont: ITU Core Indicators on Access to, and Use of, ICT by Households and Individuals, 2014

Indicator No	Indicator Name	2014
HH10	Proportion of individuals using a mobile cellular telephone	0.85
HH11	Proportion of households with internet by type of service:	
	Asymmetric Digital Subscriber Line (ADSL)	0.07
	Fixed Wireless broadband network	0.10
	Mobile broadband network (either via a handset or USB modem)	0.94
	Satellite broadband network	0.00
HH12	Proportion of individuals using the internet, by frequency:	
	At least once a day	0.55
	At least once a week but not every day	0.26
	At least once a month but not every week	0.08
	Once in a while	0.11
HH14	Barriers to household internet access:	
	Do not need the internet	0.16
	Have access to the internet elsewhere	0.03
	Lack of confidence, knowledge or skills to use internet	0.56
	Cost of the equipment is too high	0.19
	Cost of the service is too high	0.15
	Privacy or security concerns	0.00
	Internet service is not available in the area	0.02
HH15	Proportion of individuals with ICT skills, by type of skills:	
	Copying or moving a file or folder	0.82
	Using copy and paste tools to duplicate or move information within a document	0.75
	Sending e-mails with attached files	0.48
	Using basic arithmetic formulae in a spreadsheet	0.47
	Connecting and installing new devices	0.46
	Finding, downloading, installing and configuring software	0.11
	Transferring files between a computer and other devices	0.57
	Writing a computer programme using a specialized programming language	0.12
