Preface

This report follows our strategic resolve to disaggregate the 2011 Population and Housing Census report, and many of our statistical outputs, to cater for specific data needs of users. Therefore, data and commentary contained herein is one of a series of district profiles presenting disaggregated data to the level of villages, abstracted from the 2011 Population and Housing Census results.

For definitive interpretation, villages covered in this report are of 500 or more inhabitants. The analysis aims at providing ready information to facilitate planning and policy making. It therefore presents information on composition, distribution and gender.

In addition, it presents information on marital status, orphan-hood, and religion, access to water and sanitation, as well as sources of energy, among others. It is our sincere hope that information and analysis contained herein, is not only found to be very useful, but also ignites reciprocal engagements with data users to offer feedback on how forthcoming reports can be improved.

Anna Majelantle
Statistician General
 December 2015

TABLE 1.1: TRENDS IN KEY DEMOGRAPHIC INDICATORS FROM 1971, 1981, 1991, 2001 AND 2011 POPULATION AND HOUSING CENSUSES

Population Characteristics	Census	Census	Census	Census	Census
	1971	1981	1991	Census 2001	2011
Sex Ratio (Males per 100 Females)	84	89	92	93.8	95.5
Percentage Urban	9	17.7	45.7	54.2	64.1
Population Density (per km)	1	1.6	2.3	2.9	3.5
Crude Birth Rate (per 1000)	45.3	47.7	39.3	28.9	25.7
Crude Death Rate (per 1000)	13.7	13.9	11.5	12.4	6.25
Natural Rate of Increase (% per annum)	3.1	3.4	2.7	1.7	1.9
General Fertility Rate (per 1000 women aged 15-49)	189	210	161	106.9	92.2
Mean Age at Childbearing	30.5	30.6	30	30.3	20
Total Fertility Rate (births per woman)	6.5	6.6	4.2	3.27	2.7
Infant Mortality Rate	97	71	48	56	17
Child Mortality Rate	56	35	16	19	27
Under 5 Mortality	152	105	63	74	28
Life Expectancy at Birth (years)	55.5	56.5	65.3	55.6	68
Males	52.5	52.3	63.3	52.0	66

Proportion aged 17 and less with mother deceased	%	7
Proportion aged 17 and less with father deceased	%	14.7
Proportion aged 17 and less with both parents a deceased	%	3

1.0 Background and Commentary

The Population and Housing Census is the most representative form of enumeration since it covers as many people and topics as possible. It is the total enumeration of households and throughout the country. The census is carried out after every ten years in Botswana. This report covers indicators and counts of the 2011 census and makes comparisons, in some instances, with the previous census of 2001. There are two types of enumeration methods. One is de jure type and the other is de facto. De jure method refers to enumeration of population according to usual residence and excludes visitors but includes absent residents. De facto method, on the other hand, refers to enumeration of population according to where one spent the census night and it includes visitors but excludes absent resident.

The 2011 population and housing census used de facto enumeration. An important aspect about the 2011 census is its wide disaggregation of information by important variables of sex, gender, locality among others. The disaggregation formed the basis of this report. The report presents information on localities with 500 or more inhabitants.

1.1 Background to the Report

This report was necessitated by the need for disaggregated data at all levels. Statistics Botswana with assistance of the United Nations Population Fund (UNFPA) undertook work on producing a geographically disaggregated and gender sensitive information.

1.2 Importance of the Report

Demographic and socio-demographic information is critical in the development efforts of a country. The tendency has been to produce national averages to represent the situation of all people within the countries. Hence, data on the district and locality level have not been fully published and used by the localities even when available. This masked the wide disparities in demographic, health and other socio-economic indicators within the country. The outlook of these have, therefore, been overlooked hence conditions of large sections of the communities have remained largely unknown.

2.0 Population Distribution

De facto population includes people reported and recorded to have spent the night with the household prior to the enumeration of the households. Most of the indicators derived indirectly from available census data are estimates. They however have some bearing to the general conditions they attempt to measure. Most of the villages in Ngwaketse have more females than males, and hence sex ratio favours females than males.

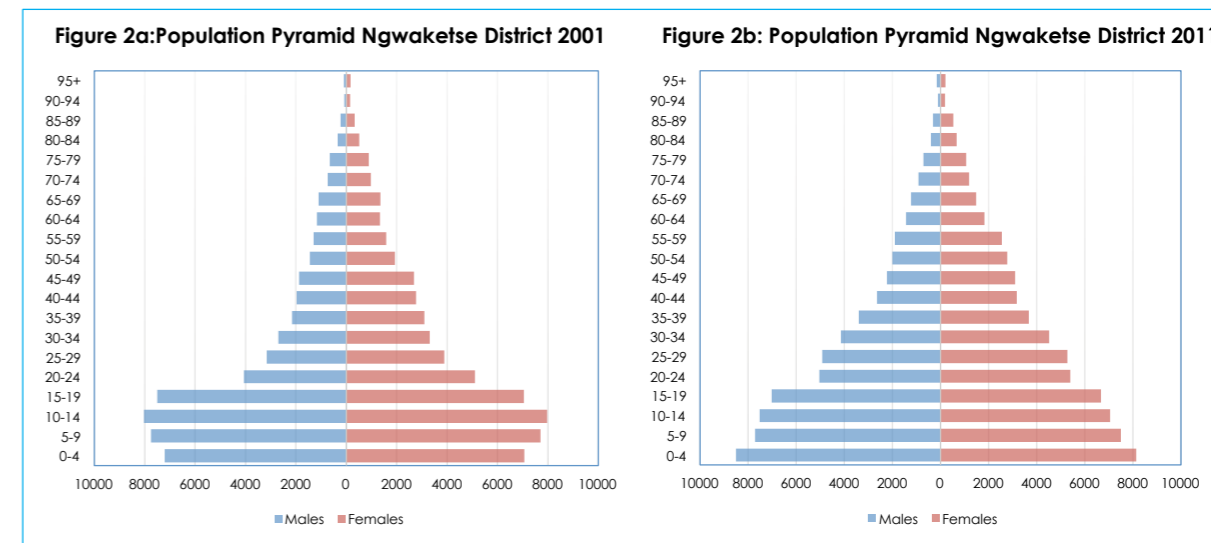

The 2011 Population and Housing Census results show that there were 129,247 persons enumerated in the Ngwaketse District during the 2011 Population and Housing Census, compared with 113,704 enumerated in 2001 Population and Housing Census. Botswana conducts the de-facto population census where by persons are enumerated where they were found during enumeration.

The population of Ngwaketse is highly concentrated in the two villages namely Kanye with 40% followed by Moshupa with 18.7%. Other villages have a population below 10% where Molapowabojang recorded 7.3% while Manyana recorded 3%.

2.1 Population Age Structure

The age distribution of the district depicts Ngwaketse as having a 'young' population, as the population is concentrated in the lower age groups than in the upper age groups. The 0-4 up to 20-24 age groups specifically has a higher proportion than the upper age groups.

Figure 2: Population Age sex Distribution for Ngwaketse District 2001 and 2011

2.2 The Youth

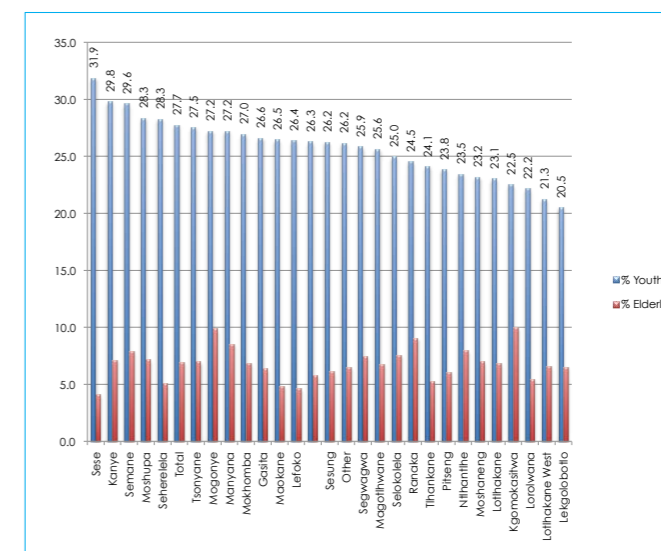

In this report, youth refers to the population aged 18 to 35 while the elderly describes the population aged 65 and over. The distribution of the youth in the population is related to the population pyramid such that there are more people in the young ages and fewer people in the older ages.

Figure 3 below shows that in all villages in Ngwaketse District, the proportion of the youth averages 28 percent. Furthermore, in all villages, the elderly population is less than 10 percent. The proportion of the youth population does not go beyond 35 percent; this may be due to the fact that the district does not have many senior secondary or tertiary institutions. Also the district does not have industries that can employ many young people.

2.3 The elderly

The elderly population refers to those aged 65 years and above. The group has special needs in terms of care and provision of other amenities.

Figure 3: Proportion of Youth/Elderly in the Population

3.0 Population Growth

Population growth refers to the change that occurs within a population due to the effects of different components of population. Any change in a population is usually due to the effects of births, deaths and migration and or reclassification of localities.

From 2001 to 2011, the Ngwaketse District experienced a modest growth of 1.3 percent. The growth however varies across the district as some localities actually experience a decline. Population decline occurred in some non-village localities which continue to lose people to bigger villages in the district with better amenities.

However, the biggest villages in district, (Kanye and Moshupa) did not experience much growth as they grew by 2.4 percent and 3.67 percent respectively. These villages are also losing people to Gaborone City due to lack of employment opportunities.

4.0 Orphanhood

The United Nations Children's Fund (UNICEF) and global partners define an orphan as a child who has lost one or both parents. Evidence clearly shows that the vast majority of orphans are living with a surviving parent, grandparent, or other family member. A further 95 percent of all orphans are over the age of five.

This definition contrasts with concepts of orphan in many industrialized countries, where a child must have lost both parents to qualify as an orphan. UNICEF and numerous international organizations adopted the broader definition of orphan in the mid-1990s as the AIDS pandemic began leading to the death of millions of parents worldwide, leaving an ever increasing number of children growing up without one or more parents. So the terminology of a 'single orphan' – the loss of one parent – and a 'double orphan' – the loss of both parents – was born to convey this growing crisis.

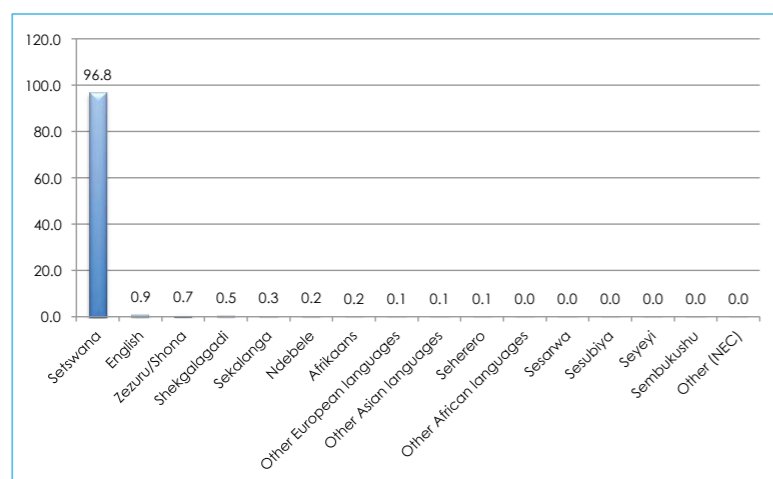

Botswana describes an orphan as someone who is aged below 17 years who has lost one or both parents.

As it was the case in other districts, cases where it was reported that the father was deceased are more prominent across all villages. This issue need to be investigated further to establish if indeed the fathers are deceased. Table 6 on the Annexes further shows that the cases of mother deceased also more common, while cases of both parents deceased were insignificant.

5.0 Language

Figure 4 shows that in Ngwaketse District, majority (96.8) of the people speak use Setswana at home. There are however traces of other languages such as Ndebele, English, Shekgalagadi etc. All these languages contributed less than one percent each.

Figure 4: Distribution of Population by Language Spoken

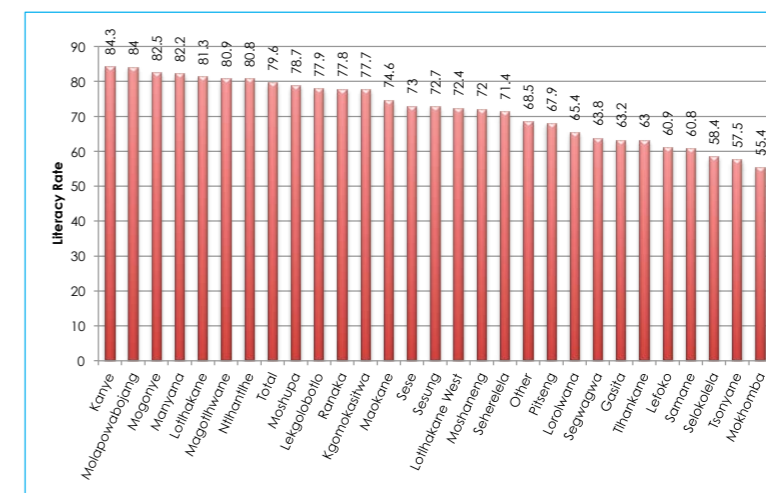

6.0 Literacy level

Estimation of literacy rate was based on population aged 10 years and above who have completed standard four or above. Those were assumed to be literate and used to estimate literacy rate.

The level of literacy in the district during the 2011 PHC averaged 79.6 percent. It is however evident that in most villages, the rates are over 80 percent. Figure 5 below that the lowest literacy rate (55.4%) was recorded in the village of Mokhomba, followed by Tsonayne at 57.5 percent.

7.0

Figure 5: Distribution of Population by Literacy

Religious Affiliation

A religion is defined as an organized collection of beliefs, cultural systems, and world views that relate humanity to an order of existence. Other scholars define religion as a collection of cultural systems, belief systems, and worldviews that establishes symbols that relate humanity to spirituality and, sometimes, to moral value.

Figure 6: Type of Religion in Ngwaketse District

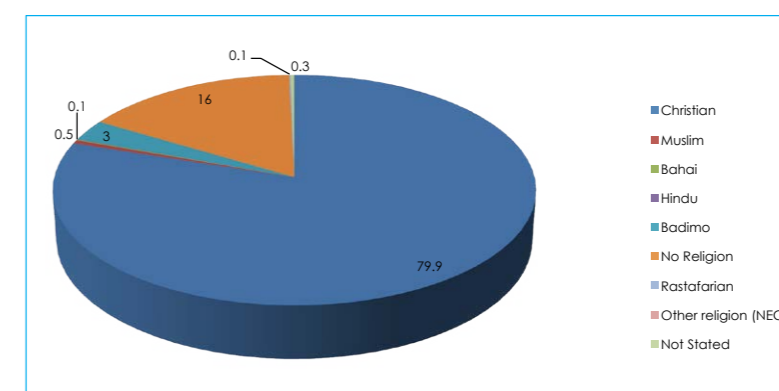

Figure 6 shows that close 80 percent of Ngwaketse residents followed the Christian denomination followed by those who had no religion at 16 percent and Badimo at 3 percent. Other religions were recorded at less than one percent of the district population.

The highest proportion (79.9%) of the population in Ngwaketse indicated that they were Christians, followed by those with no religion and Badimo with 16% and 3% respectively. Other religions such as Muslim, Bahai, Hindu and Rastafarian recorded less than 1% each as displayed in Figure 7.

8.0 Marital Status

Under the Marriage Act which was amended in 2001, the legal age of marriage is 18 for both sexes, conditional on parental consent. Without parental consent, the legal age is 21. This age limit, however, does not apply to marriages contracted under customary or religious law.

However, in the 2011 Population and Housing Census, it was realized that some cultures contentiously allowed marriage at the ages of 12 years, despite the provision of the statutory instrument.

Figure 7: Marital Status for Ngwaketse District 2011

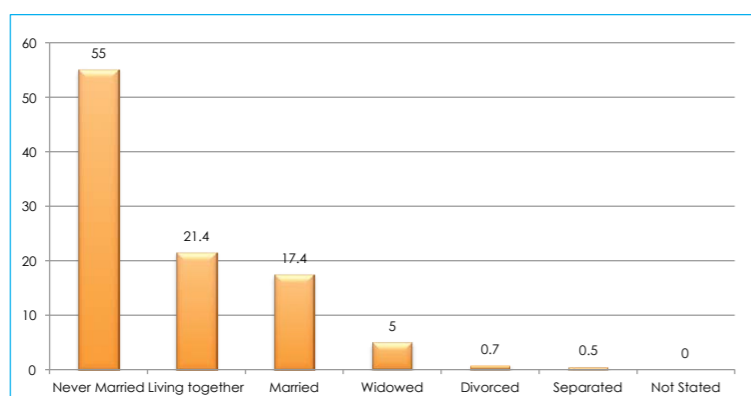

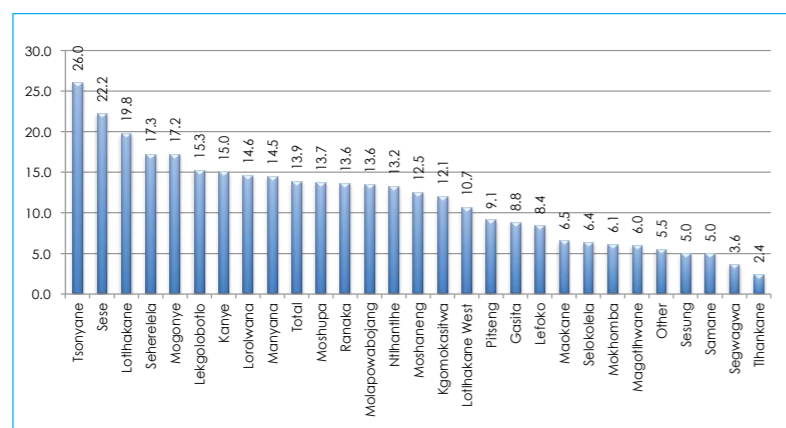

Table 9 shows that, only 17.4% of the population of Ngwaketse district reported to be married, whereas a significant number (55%) of the population were never married. A fairly lower proportion (21.4%) reported to be living together while separated and divorced population was below 1%. The widowed proportion was 5%.

9.0 Labour force

Labour force is defined as the population aged 15 to 64 years who are either actively seeking employment or are employed. This group is used to estimate rate of unemployment in a population.

Figure 8: Rate of Unemployment by Village in Ngwaketse District 2011

The overall level of unemployment in the district was 13.9 percent as shown through Figure 8 below. Unemployment rate was highest (26%) in Tsonyane village. Also, the lowest unemployment rate (2.4%) was recorded in Thankane village, this may be due to the fact that Thankane is small village with a number farms. It is therefore possible the most people in the village are farm workers.

10. Disability

Disability is an umbrella term, covering impairments, activity limitations, and participation restrictions. Impairment is a problem in body function or structure; an activity limitation is a difficulty encountered by an individual in executing a task or action; while a participation restriction is a problem experienced by an individual in involvement in life situations.

Disability is thus not just a health problem. It is a complex phenomenon, reflecting the interaction between features of a person's body and features of the society in which he or she lives. Overcoming the difficulties faced by people with disabilities requires interventions to remove environmental and social barriers.

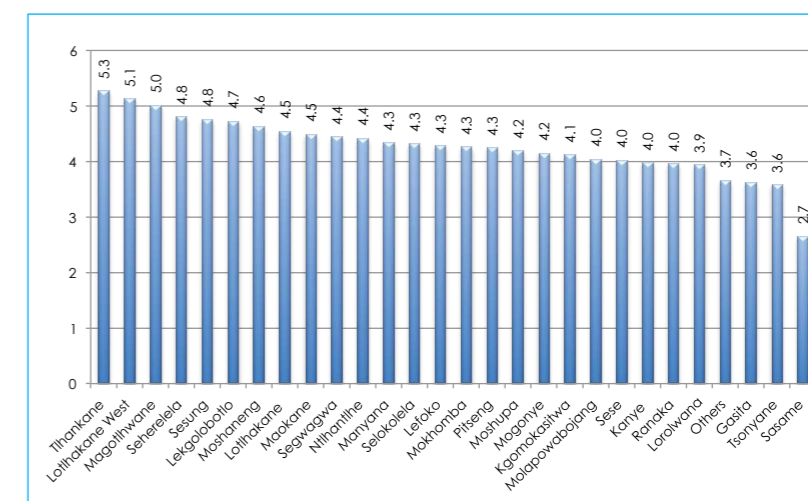

Disability also refers to incapacities as a result of physical or mental deficiencies such as bodily abnormalities, defects and impairments. Impairments are defects of structure or functions of the body which give rise to personal inability to perform necessary activities.

The data on Table 17 shows that the most common (2223) type of disability in the district was defects of seeing in 1 or 2 eyes, the second most common (945) disability was defects of hearing in 1 or 2 ears. In all the villages in the district, inability to speak seems to be the least common type of disability it accounted for less than 200 cases.

11.0 Household Size

The data through Figure 9 shows that the average household size in Ngwaketse was 4.1 persons. The highest household size (5.3 persons) was recorded in Thankane, followed by Lotlhakane West with 5.1 persons. The lowest household size (2.7 persons) was recorded in Samane while other villages' household size ranged between 3 and 4 persons.

Figure 9: Average household size by Village

12.0 Access to Drinking Water and Sanitation

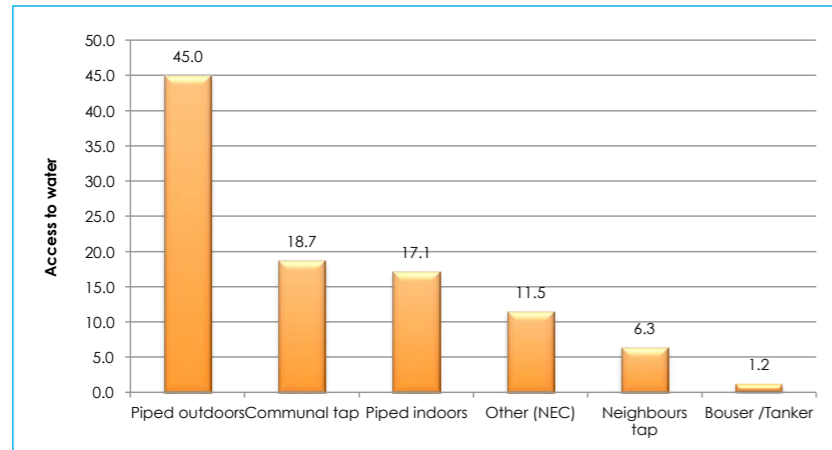

As a signatory of the Millennium Declaration, Botswana is committed to achieving the Millennium Development Goals by 2015. Provision of safe portable water remains a priority for the country. To date, more than 90 percent of the country's population has access to portable water. One target of the MDGs is to reduce by half the proportion of people without sustainable access to safe drinking water and basic sanitation.

12.1 Access to Portable Water

Since availability of safe drinking is an indicator of quality of life, it is priority of the government to provide all the inhabitants of the country with safe drinking water.

The 2011 PHC data shows that the highest proportion (45%) of the households was getting water from piped indoors. Moreover, the second highest (18.7%) proportion of the households was getting their water from communal taps. The lowest proportion (1.2%) of the households was those who reported to be getting their water from bouser/tanker. Figure 11 below further shows that 88.3 percent of the household had have access to safe drinking water.

Figure 10: Households by Access to Water

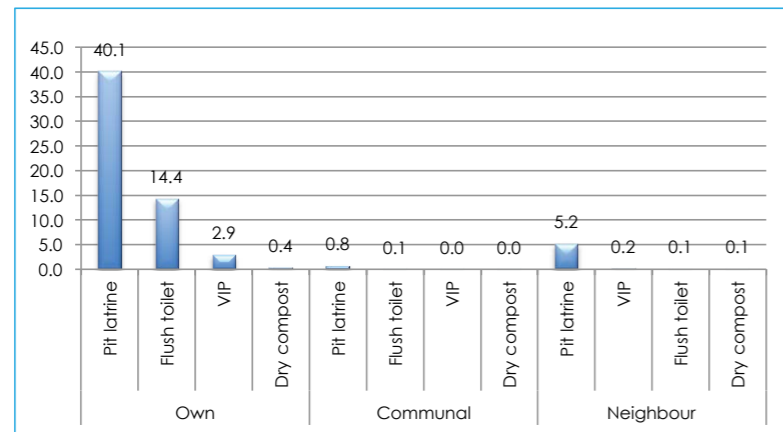

12.2 Access to sanitation

Access to sanitation facilities was measured at household level by assessing whether it has access to flush toilet either in-house, communal, one shared with a neighbour or a sanitary pit latrine. Overall, 79.8 percent of the sub district's households had access to sanitation facilities. While 14.4 percent of the district's households had access to own flush toilets, 46.1 percent had access to pit latrines, out of which 40.1 percent used their own pit latrines and 5.2 percent used a neighbour's toilet.

The village of Kanye had the highest proportion of households which used own flush toilets at 14.4 percent followed by Moshupa at 12.2 percent. On the other hand, the use of pit latrines was the most common mode of waste disposal as it was used by 46.1 percent of the sub district's households.

Figure 11: Access to Toilet Facility

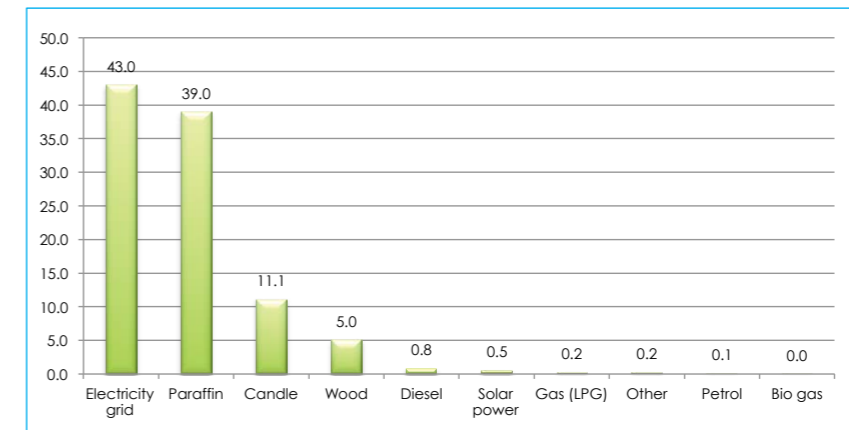

13.0 Energy

13.1 Sources of Fuel for Lighting

As for source of fuel for lighting, majority of the households (43%) were using electricity, followed by those reported to be using paraffin at 39 percent. There were a further 11.1 percent of the households who were using candle for lighting, while the usage of firewood was low below 5 percent. Other sources of fuel for lighting contributed less than 1 percent.

Figure 12: Distribution of Households by Source Fuel for Lighting

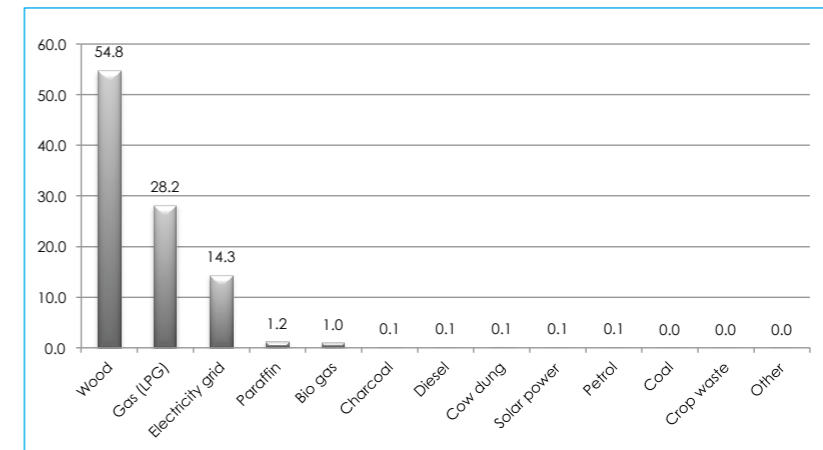

13.2 Sources of Fuel for Cooking

Cooking accounts for about 90 percent of all household energy consumption in developing countries. Worldwide, 2.5 billion people use biomass fuels for cooking. These include firewood, charcoal, dung and agricultural residues. Biomass fuels are often the only available energy source, especially in rural areas. Firewood is often burnt in open places, emitting smoke which may contaminate the atmosphere.

Regarding source of fuel for cooking in Ngwaketse District, most households (54.8%) were using firewood; a small proportion (28.2%) reported to be using gas (LPG). Furthermore, 14.3 percent of the households were using electricity. There were traces of other forms of source of fuel such as petrol, charcoal, cow dung crop waste etc.

Figure 13: Distribution of Households by Source of Fuel for Cooking

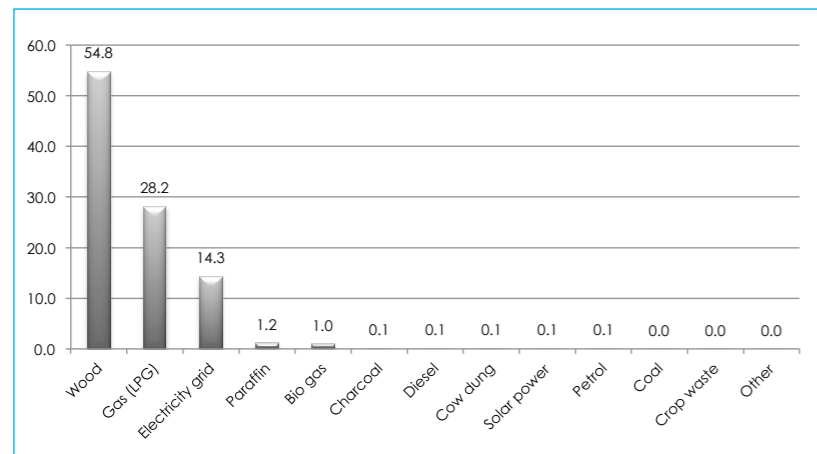

13.3 Sources of Fuel for Heating

In a home the heating system normally serves two purposes. The primary purpose of heating is to maintain warm temperatures within the home during colder months. Keeping a house warm is important for the occupants of the home as well as the structure itself. The secondary purpose of a heating system is to heat domestic hot water for usage during all months of the year.

Figure 14 below shows that the Ngwaketse District, the households mainly (80.5%) use firewood for heating, only a small proportion (17.8%) of the households use electricity.

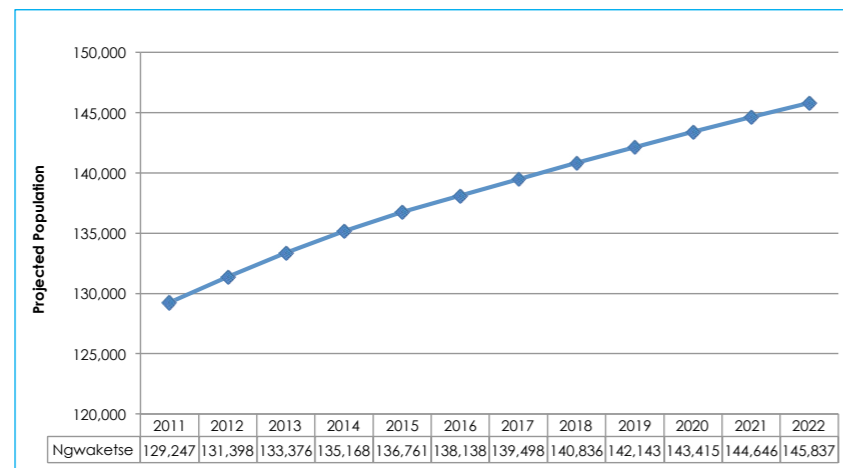

Figure 14: Distribution of Household by Source of fuel for Heating

14.0 Population Projections

The computation of these projections was based on the component method which takes into account the assumed future behaviour of fertility, mortality and migration.

Figure 15: Projected Population of Ngwaketse District 2011-2022
