Preface

This stats brief provides population projections for the year 2020. In this stats brief, the reference point of the population projections was the 2011 Population and Housing Census, in which the total population by age and sex is available. Population projections give a picture of what the future size and structure of the population by sex and age might look like. It is based on knowledge of the past trends, and, for the future, on assumptions made for three components of population change being fertility, mortality and migration. The projections are derived from mathematical formulas that use current populations and rates of growth to estimate future populations.

The population projections presented is for Cities, Towns and Villages excluding associated localities for the year 2020. Generally, population projections are more accurate for large populations than for small populations and are more accurate for the near future than the distant future. It is therefore important to note that estimates for smaller villages should be used with caution.

They are a good initiative that provides an estimate of the population size into the future. They also provide an impetus for the Policy makers to have established evidence-based decision making processes as well as equitable allocation of resources.

The report will be useful for planning and other purpose at locality level.

Dr Burton S. Mguni
Statistician General

INTRODUCTION

This brief provides supplementary population projections for Cities, Towns and Major villages for the period of 2020. In this publication, the starting point of these population projections is the 2011 Population and Housing Census, in which the total population by age and sex is available. The size and composition of the future population have been projected to 2020.

Population projections can be described as an illustration of growth and change in population which occurs if certain assumptions of the level of fertility, mortality and migration were to prevail over a period of projections.

Statistics Botswana has done a similar exercise after the 2011 Population and Housing Census by producing a population projections publication (2011-2026). The document developed projections at a national level using the Cohort component (the preferred method of population projection).

Population Projections Methodology Used

The most basic methods of calculating numerical population change over a period of time is the balancing equation:

$$P_1 + (B - D) + (I - E) = P_t$$

Where

- P₁ = is the population at base period
- B = is the number of births in the population during period 0
- D = is the number of Deaths in the population during period 0
- I = is the number of Immigrants into population during the period 0
- E = is the number of emigrants from the population during the period t
- P_t = is the population at time t

The population of a given area can change as a result of fertility (people being born), Mortality (people dying), immigration (people moving in) and Emigration (people moving out). The assumptions are based on demographic trends observed between 2001 and 2011. Given an annual increase of 1.9% a geometric series methodology for projections is applied.

$$P_t = P_o(1+r)^t$$

Where

- P_t = is the population at time t
- P_o = is the Base population at time o
- r = annual growth rate
- t = interval time

Table 1 below illustrates comparisons between the 2011 Population and housing census, the 2017 Botswana Demographic Survey and the 2020 projected population. The total population for the 2011 Botswana Population and Housing Census (PHC), was 2,024,904 with an annual growth rate of 1.9 percent. Projections following the 2011 PHC estimated the population of Botswana to reach 2,374,698 in 2020 with approximately 50.7 percent of females and 49.3 percent of males. The 2017 Botswana Demographic Survey estimated the population at 2,154,863, with 1,034,678 males and females at 1,120,285.

Table 1: Population Distribution by Sex

Population	Male	Female	Total
2011 Census	988,957	1,035,947	2,024,904
2017 BDS	1,034,578	1,120,285	2,154,863
2020 Projected	1,171,629	1,203,068	2,374,697

Table 1.1 below indicates that the sex ratio at birth was 102 males per 100 females. This means that there were more males being born than females. However from age groups 15-19, the ratio shifts to 99 males per 100 females. This ratio continues to show more women surviving in the subsequent age groups as compared to their male counterparts, from age groups 40-44 to age groups 80+

Table 1.1: Distribution of Census Population by Sex

Age Group	2011		Sex Ratio	TOTAL
	Male	Female		
0-4	119,999	117,315	102	237,314
5-9	108,544	106,618	102	215,162
10-14	104,419	102,875	102	207,294
15-19	104,818	105,928	99	210,746
20-24	97,249	103,101	94	200,350
25-29	101,194	106,658	95	207,852
30-34	84,515	86,027	98	170,542
35-39	68,435	66,784	102	135,219
40-44	48,767	50,530	97	99,297
45-49	37,881	44,380	85	82,261
50-54	29,742	36,620	81	66,362
55-59	24,368	29,681	82	54,049
60-64	17,344	20,240	86	37,584
65-69	12,243	15,504	79	27,747
70-74	9,464	12,797	74	22,261
75-79	6,968	10,924	64	17,892
80+	13,007	19,965	65	32,972
Total	988,957	1,035,947	95	2,024,904

Table 1.2 below shows that the total projected population stood at 2,374,697 from the previous figure of 2,024,904 of the 2011 Population and Housing Census and the 2017 Botswana Demographic Survey which accounted for 2,154,863. The sex ratio for the 2011 Population and Housing Census and the 2020 projected population demonstrate the same characteristics of more males being born than females, but chances of survival on the subsequent years favouring the females than the males.

Table 1.2: Distribution of Projected Population by Sex

Age Group	2020		Sex Ratio	TOTAL
	Male	Female		
0-4	115,970	113,806	102	229,776
5-9	129,342	126,843	102	256,185

70-74	13,354	16,547	81	29,901
75-79	8,752	12,127	72	20,879
80+	8,766	13,244	66	22,010
Total	1,171,629	1,203,068	97	2,374,697

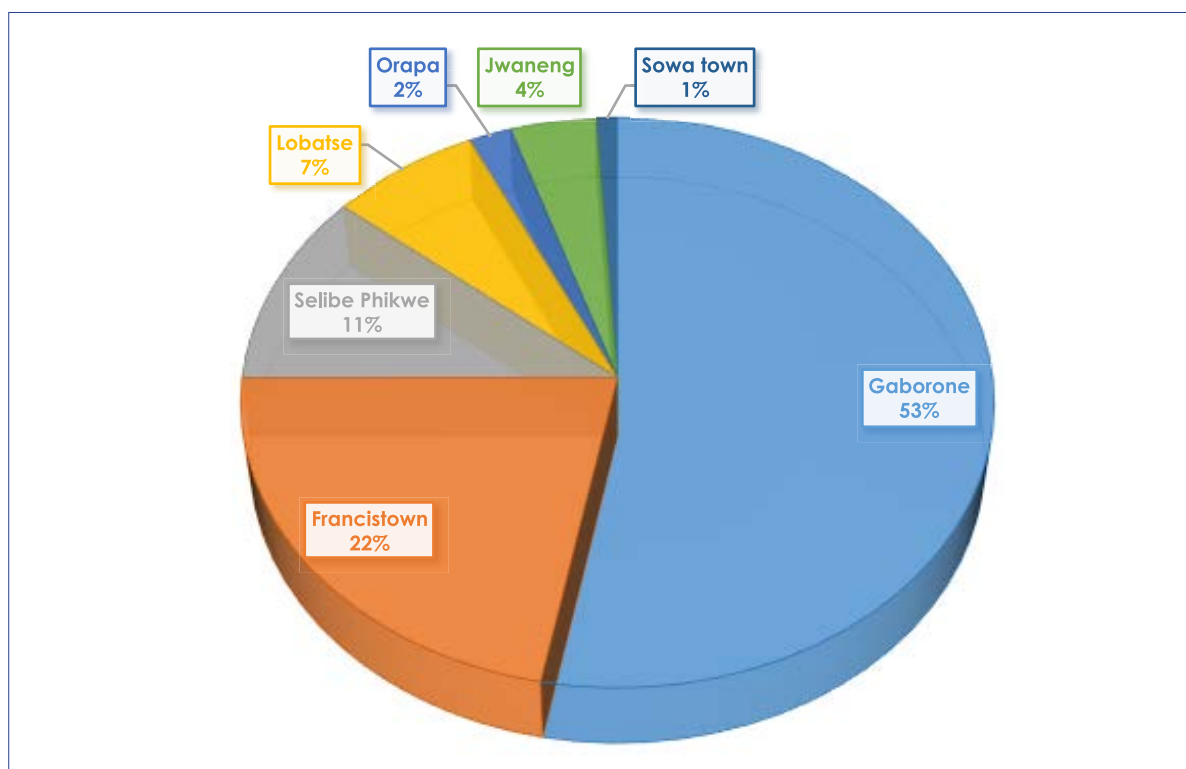

Table 2 below shows that about 521,341 of the population was estimated to be residing in Cities and Towns, out of which 274,225 (52.6 percent) was estimated to be residing in Gaborone City by the year 2020 while 117,301 (22.5 percent) was estimated to be living in Francistown city.

By 2020, Selibe Phikwe population is projected to reach 58,532 and Lobatse population is projected to be 34,361. Jwaneng and Orapa populations are projected to reach 21,332 and 11,290 respectively, while Sowa Town is projected to increase by 0.8 percent to reach 4,262 in 2020.

Table 2: Population Projections by Cities/Towns and Sex -2020

Cities/Towns	Male		Female		Total	
	Number	Percent	Number	Percent	Number	Percent
Gaborone	134,493	52.3	139,848	52.9	274,341	52.6

Jwaneng	11,631	4.5	9,701	3.7	21,332	4.1
Sowa Town	2,322	0.9	1,940	0.7	4,262	0.8
Total	257,087	100	264,260	100	521,347	100

Figure 1: Percentage Population Distribution of Cities/Towns-2020

The majority of the population residing in Cities and Towns is in age group 15-64. About 24.7 percent of the population residing in Cities and Towns is aged younger than 15 and a small proportion is aged 65 and above.

The largest share of the population is projected to be residing in villages, approximately 1,212,199. Of these people, approximately 34.9 percent is aged younger than 15 while and estimated 5.5 percent is 65 years and above.
