Preface

Statistics Botswana is mandated to compile data on industrial production in Botswana, hence electricity indices in this report are confined to electricity generated locally. However, importation and distribution volumes, and their percentage changes are included as well. This indicates Botswana's progress over time, towards generating adequate electricity to meet her demand. The data used in this brief is sourced from the Botswana Power Corporation.

This statistical brief is intended to apprise on Electricity Generation, Importation and Distribution by presenting Monthly, Quarterly and Yearly Volumes as well as Indices for Electricity Generation in Botswana. Also included are Year-on-Year and Quarter-on-Quarter Percentage Changes in Indices of Electricity Generation from 2011 to the second quarter of 2021. In subsequent sections of this report, emphasis is on the second quarter of 2021, compared to the first quarter of 2021, and the corresponding quarter in 2020. This report uses 2013 as the base year.

The Index of Electricity Generation (IEG) stood at 120.2 during the second quarter of 2021, reflecting a year-on-year increase of 26.4 percent compared to 95.1 recorded during the corresponding quarter in 2020. The quarter-on-quarter comparison shows a decrease of 14.3 percent, from 140.3 during the first quarter of 2021.

The release further shows changes in the volume of electricity generation in a given period against the base year (2013), and hence provides a reflection of the trend in the local electricity sector.

For more information, contact the Directorate of Stakeholder Relations at 3671300. All Statistics Botswana outputs/publications are available on the website at www.statsbots.org.bw and also at Statistics Botswana Information Resource Centre (Head-Office, Gaborone).

I sincerely thank all stakeholders involved in the formulation of this brief for their continued support, as we strive to better serve users of our products and services.

Dr. Burton S. Mguni
Statistician General
September 2021

1.0 Summary of Findings of the Index of Electricity Generation (IEG)

All figures in this report are not seasonally adjusted.

Key indicators of Electricity Generation from the first quarter of 2013 to the second quarter of 2021 are presented in **Table 1**.

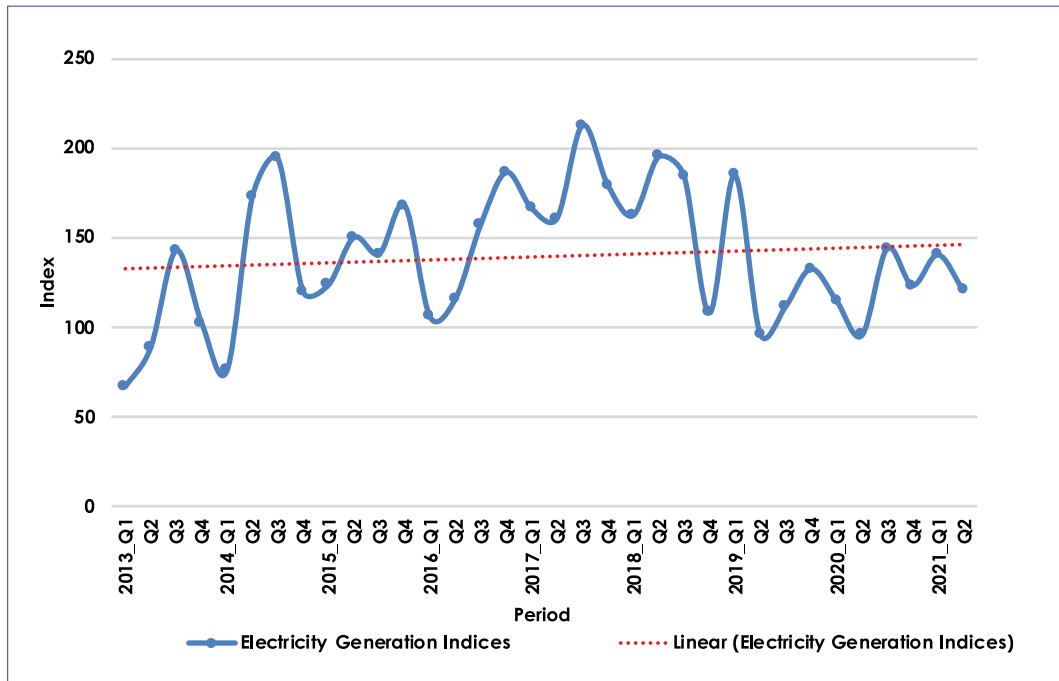

The Index of Electricity Generation (IEG) stood at 120.2 during the second quarter of 2021, reflecting an increase of 26.4 percent compared to the index of 95.1 recorded during the same period in 2020. The quarter-on-quarter comparison shows a decrease of 14.3 percent, from the index of 140.3 during the first quarter of 2021.

Table 1: Selected Key Indicators of Electricity Generation: 2013 First Quarter to 2021 Second Quarter

Note: 1. () Indicates negative figures

Figure 1 presents the trend of the Index of Electricity Generation from the first quarter of 2013 to the second quarter of 2021. There has been a slight improvement in local generation as evidenced by the trend line, albeit with fluctuations between the years.

Figure 1: Index of Electricity Generation (MWH): 2013 First Quarter to 2021 Second Quarter

1.1 Electricity Generation

This Sub-Section discusses the physical volume of electricity generated locally as presented in **Table 2**. The table forms the basis for computation of indices of electricity generation in **Table 3**. The Year-on-Year and Quarter-on-Quarter percentage changes in the volume of electricity generated are presented in **Table 4** and **Table 5**, covering the period 2011 to 2021 second quarter.

The physical volume of electricity generated increased by 26.4 percent (105,410 MWH), from 399,903 MWH during the second quarter of 2020 to 505,313 MWH during the current quarter.

The quarter-on-quarter perspective shows that local electricity generation decreased by 14.3 percent (84,586 MWH), from 589,899 MWH during the first quarter of 2021 to 505,313 MWH during the period under review. This decrease emanates from operational challenges realized at Morupule B power plant.

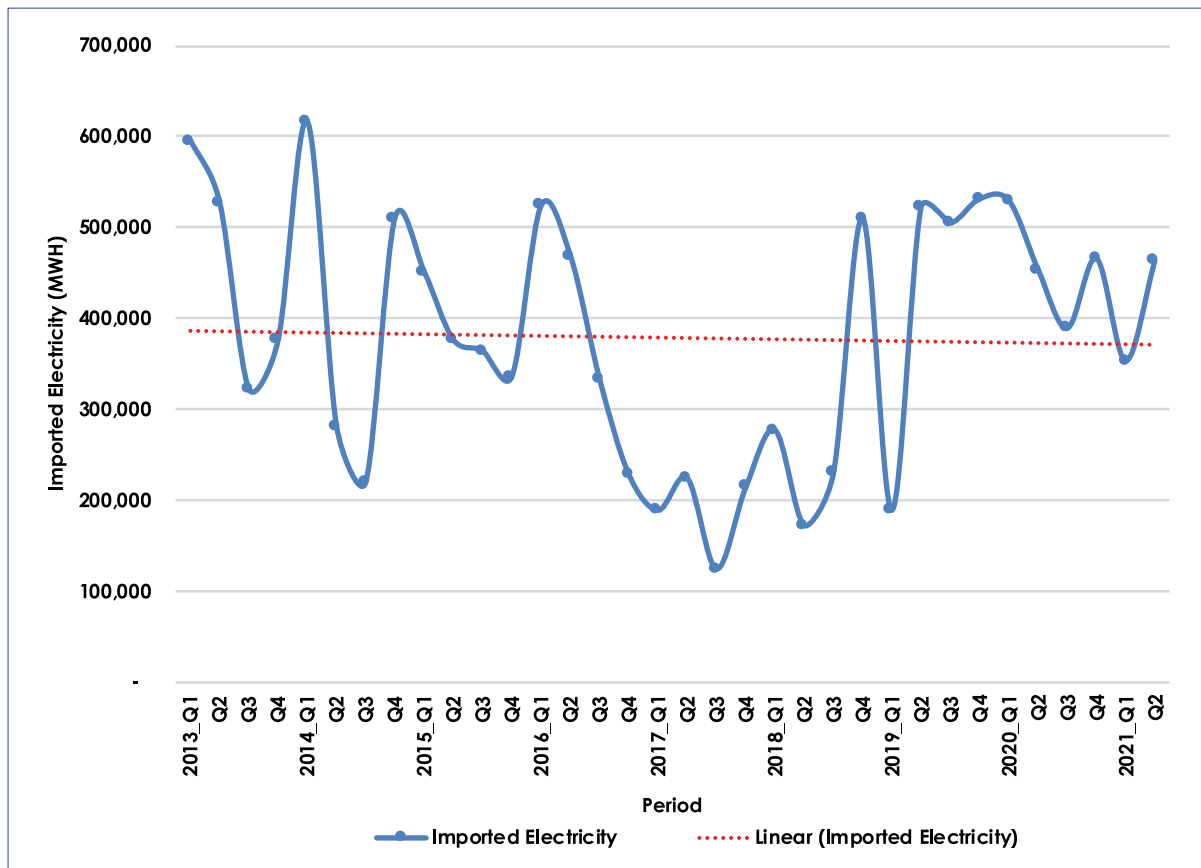

1.2 Imported Electricity

The discussions in this section are based on **Table 6**, and **Table 7** as well as **Figure 2**.

During the second quarter of 2021, the physical volume of imported electricity increased by 2.1 percent (9,438 MWH), from 453,733 MWH during the second quarter of 2020 to 463,171 MWH during the quarter under review.

Compared to the previous quarter, imported electricity during the second quarter of 2021 shows an increase of 31.1 percent (109,923 MWH), from 353,248 MWH during the first quarter of 2021 to 463,171 MWH during the current quarter.

Figure 2 shows that even though there are fluctuations in the physical volume of imported electricity, generally importation of electricity shows a slight downward trend. This indicates the country's continued effort to generate adequate electricity to meet demand, hence the decreased reliance on electricity imports.

Figure 2: Physical Volume of Imported Electricity (MWH): 2013 First Quarter to 2021 Second Quarter

Botswana imported 47.8 percent of total electricity distributed during the second quarter of 2021. Eskom was the main source of imported electricity at 57.8 percent of total electricity imports. The Southern African Power Pool (SAPP) accounted for 17.8 percent, while the remaining 15.6, 4.6 and 4.2 percent were sourced from ZESCO, Nampower and Cross-border electricity markets (**Table 8**). Cross-border electricity markets is an arrangement whereby towns and villages along the border are supplied with electricity directly from neighbouring countries such as Namibia and Zambia.

1.3 Distribution of Electricity

The section combines the local generation and imported electricity to come up with electricity that is available for distribution in Botswana. This does not take into account electricity used for auxiliary services, pumping, network losses as well as production of electricity through incineration of waste. The computation of electricity distribution is guided by the International Recommendations for Industrial Statistics (**IRIS**) 2008. **Tables 9, 10** and **11** form the basis for discussion under this subsection.

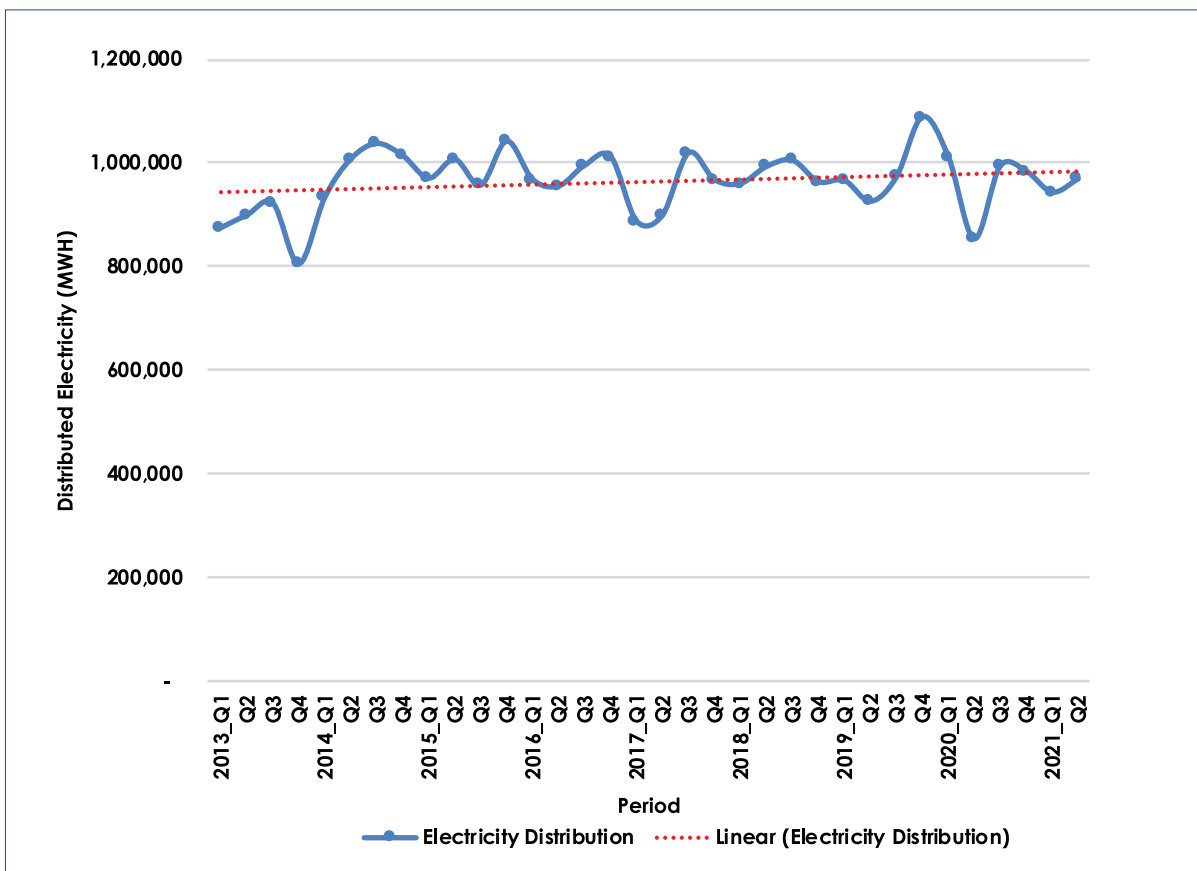

Table 9 shows the physical volume of electricity distributed from 2011 to the second quarter of 2021, while **Table 10** presents annual percentage changes in the volume of electricity distributed from 2011 to the second quarter of 2021. These tables can also be used as guidance with regard to whether electricity distributed is improving over time, thereby indicating that there are ongoing efforts to meet the domestic demand.

Comparison of electricity distributed during the reference period and the second quarter of 2020 shows an increase of 13.5 percent (114,848 MWH), from 853,636 MWH to 968,484 MWH during the current quarter.

From a quarter-on-quarter perspective, distributed electricity shows an increase of 2.7 percent (25,337 MWH), from 943,147 MWH during the first quarter of 2021 to 968,484 MWH during the review quarter.

Figure 3 shows that there has been a gradual increase in distributed electricity from the first quarter of 2013 to the second quarter of 2021, even though there are fluctuations.

Figure 3: Physical Volume of Distributed Electricity (MWH): 2013 First Quarter to 2021 Second Quarter

1.3.1 Contribution of Electricity Generation to Distribution

Electricity generation given as a percentage of electricity distributed is of paramount importance in assessing whether local generation is improving overtime to reduce reliance on imported electricity. This information is displayed in **Table 11**.

It can be observed from **Table 11** that electricity generated locally contributed 52.2 percent to electricity distributed during the second quarter of 2021, compared to a contribution of 46.8 percent during the same quarter in 2020. This gives an increase of 5.4 percentage points.

A quarter-on-quarter comparison shows that the contribution of electricity generated to electricity distributed decreased by 10.3 percentage points compared to the 62.5 percent contribution of locally generated electricity during the first quarter of 2021 to 52.2 percent currently.

2.0 Technical Notes

2.1 Background

The generation of electricity in Botswana started in 1985 with a coal fired thermal power station at Morupule operating at a capacity of 132 MWH. Prior to this period, most of Botswana's electricity was imported from South Africa's power utility, Eskom. In 2008 South Africa's electricity demand started to exceed its supply, resulting in the South African government restricting power exports. As a result, Botswana and the entire Southern African region experienced massive power shortages because of the reduced electricity exports from South Africa (http://en.wikipedia.org/wiki/Energy_in_Botswana).

To avert the situation, Botswana Government opted for alternative ways of sourcing electricity for the country; hence the plan to increase local generation of electricity at Morupule Power Station. The Morupule Power A plant of capacity 132 MWH was augmented with Morupule Power B which is to have a capacity of 600 MWH upon completion (BPC Annual Report, 2010).

3.2 Concepts and formula of the Index of Electricity Generation, Importation and Distribution

The Index of Electricity Generation is a Laspeyres index. The weighted average for electricity generation equals one because there are no various electricity products. The index is thus calculated using the formula;

$$I = \frac{\sum R_i * W_i}{\sum W_i}$$

Where;

I is the index

R is the electricity generation relative

W is the weight

The electricity generation relative for the quarter has been calculated by using the formula:

$$R_i = \frac{P_{ic}}{P_{i0}} * 100$$

Where P_{ic} is the electricity generation of the current quarter and P_{i0} is the generation of electricity of the base year.

The calculation of the monthly generation indices is based on the volume of electricity units produced.

2.3 Base Year

The base year, also referred to as **reference period** used in this brief is 2013, which is set at 100. The selection of the reference period was informed by the availability of relevant data and synchronization of data with other sectors within the industry.
