PREFACE

This report presents Transport and Infrastructure Statistics for the calendar year 2020. It presents statistics relating to road, rail, air and water transport as well as freight transported by road. In addition to the quarterly Stats Brief, Statistics Botswana produces this annual report which shows the trend in the status and performance of transport infrastructure and the related services over the years with an emphasis on the year 2020.

Administrative data from the following organizations was used to produce this report: Department of Road Transport And Safety, Botswana Police Service, Civil Aviation Authority Botswana, Botswana Railways, Central Transport Organization, Roads Department, Ministry Of Local Government and Rural Development. Statistics Botswana acknowledges and extends gratitude to these organizations for their assistance and support in the production of this report.

For more information and further enquiries, contact the Directorate of Stakeholder Relations on +267 367 1300. This publication, and all other Statistics Botswana outputs are available on the website at (http://www.statsbots.org.bw) and at the Statistics Botswana Information Resource Centre (Head-Office, Gaborone).

EXECUTIVE SUMMARY

This section gives only the highlights of the results. More detailed results are shown in the respective sections.

In 2020, the total road network in Botswana measured 32,562.8 km. Of this length,18,507 km (56.8 percent) was under the care of the Central Government while 14,056.3 km (43.2 percent) was managed by Local authorities. Road density in Botswana was 0.05 km sq.

There were 579,789 licensed vehicles in Botswana in 2020, a decrease of 3.6 percent from 601,190 licensed vehicles recorded in 2019. Out of this total, privately owned vehicles constituted 97.8 percent of the total while government vehicles made up only 2.2 percent. Most of the firstly registered vehicles (79.2 percent) were used while 20.7 percent were brand new vehicles. Rebuilt vehicles accounted for only 0.1 percent.

The number of road accidents recorded in 2020 went down by 19.1 percent from 18,623 accidents recorded in 2019. On average road accidents decreased by 4.9 percent annually from 2011 to date. Casualties recorded in 2020 were 5,052, of which 6.4 percent were fatalities. Casualties went down by 21.6 percent from 6,442 casualties recorded in 2019.

In 2020, the number of accidents per 1,000 vehicles went down from 31.6 in 2019 to 26.0. This was a 17.8 percent decrease. Accidents per 10,000 population went down by 19.1 percent from 79.5 in 2019 to 64.3 in 2020.

In 2020, aircraft movements went down from 87,124 in 2019 to 21,283, a 75.6 percent decrease. Domestic aircraft movements constituted 76.3 percent, while international movements accounted for 23.7 percent of the total. Domestic passengers accounted for 51.2 percent of total air passengers while international passengers made up 48.8 percent.

Goods transported through rail went down by 1.3 percent in 2020, from 1,220,496 net tonnes in 2019 to 1,204,981 net tonnes. Most categories of goods transported by rail went down, except Imports from North and Transit Traffic, which both realized an increase of more than 100 percent. Botswana total declined by 8.9 percent compared to 2019. Revenue generated from the transportation of goods by rail declined by 1.3 percent from P247 million in 2019 to P244 million in 2020.

Passengers who used the Pontoon in 2020 were 156,802. Out of those passengers, 64.5 percent were males while 33.4 percent were females. Minors accounted for 1.8 percent of total passengers.

Goods imported into Botswana transported by road increased by 4.1 percent from 3.5 million tonnes in 2019 to 3.7 million tonnes in 2020. Imports transported by road grew at an average annual rate of 3.2 percent from 2017 to date. The value of imports transported through road in 2020, increased by 0.9 percent. The value of goods imported transported using road grew at an average annual rate of 8.0 percent.

1. ROAD TRANSPORT

1.1 Road Network

Roads in Botswana are managed and maintained under two authorities, namely the Central Government and Local Authorities.

In 2020, the total road network in Botswana measured 32,562.8 km, a 1.4 percent increase when compared to 2019. Out of this length, 18,507 km (56.8 percent) were under the care of the Central government while Local Authorities were in charge of 14,056.3 km (43.2 percent).

A great length of roads in Botswana in 2020 were gravel, constituting 33.3 percent of the total. These were followed by bitumen roads accounting for 31.9 percent of the total. Earth and Sand/track made up 17.2 and 16.7 percent respectively. See Table 2.1d and Figure 1 below.

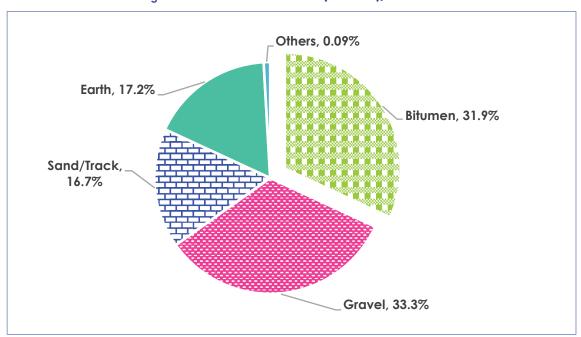

Figure 1: Total Road Network (Percent), 2020

Note: "Others" means roads paved with Interlocking Bricks and Concrete

2020	39.2	39.1	21.7	100

Source: Department of Roads, Ministry of Transport and Communications

In 2020, the otal road network maintained by Local Authorities was 14,056.3 km, an increase of 3.3 percent from 13,608.2 km in 2019. Local Authorities are in charge of access roads which are less than 10 km and all the internal roads. The Southern and South East districts realized an increase of 20.6 and 15.0 percent in length of roads.

A great length of tertiary roads were found in the Central District, with 27.6 percent of total tertiary roads in the country. Southern District had 12.1 percent.

Kgalagadi District had a great length of gravel roads, which made up 67.2 percent of the total roads in the district. Kgatleng and North West followed with 42.6 and 31.3 percent respectively

Earth roads constituted 39.9 percent of total tertiary roads. A high percentage (39.5 percent) of total earth roads were found in the Central District. Southern District followed with 20.1 percent of total earth roads,

The districts that had concrete roads were Lobatse (6.0 Km), Southern (0.3 km) and Francistown (0.1 km). See **Table 2.1b** and **2.1c** below.

1.2. Motor Vehicle Registrations

The annual stock of motor vehicles comprises of government owned and privately owned motor vehicles. Privately owned motor vehicles are categorized into first registrations and renewals.

1.2.1 National Vehicle Stock

National vehicle stock in Botswana decreased by 3.6 percent in 2020 when compared to 2019, from 601,190 vehicles to 579,789. Most of these vehicles were passenger cars (63.7 percent) and vans(19.5 percent). National vehicle stock increased at an average annual rate of 6.4 percent between 2011 and 2020. This is shown in Table 1 in Appendix 1 and Figure 2 below.

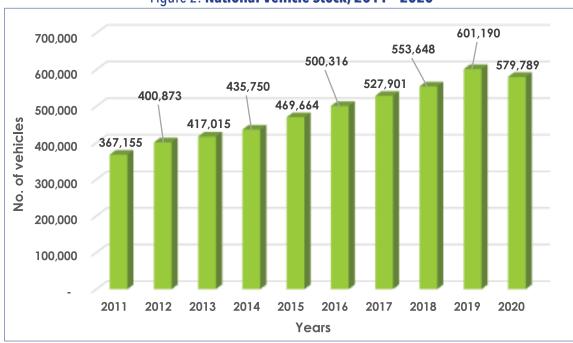

Figure 2: National Vehicle Stock, 2011 - 2020

Privately owned vehicles accounted for 97.8 percent of national vehicle stock, while government vehicles constituted 2.2 percent. The increase in vehicle stock over the years has brought with it some major challenges, for example, an increase in road accidents as shown in Section 3 and congestion on the roads especially in cities. This growth is also likely to negatively impact on the durability or life span of the national roads, particularly in the more populated areas such as the eastern part of Botswana.

1.2.2 Private Vehicle Stock

In 2020, privately owned vehicles went down from 588,567 in 2019 to 567,080, a decrease of 3.7 percent. Three categories of vehicles experienced a decline. Buses went down by 10.9 percent, while passenger cars and vans declined by 5.1 and 0.2 percent respectively. Passenger cars and vans made up 64.6 and 18.6 percent of total privately owned vehicles respectively. Privately owned vehicles increased at an average annual rate of 5.5 percent between 2011 and 2020. See Table 2 in Appendix 1.

In 2020, vehicles per 1,000 population was 242.0, a decrease of 3.7 percent when compared to 2019 at 251.2. As the private vehicle population continues to grow, it negatively affects the use of public transport. This means strategies should be put in place to make public transport more attractive. (see Table 2, Appendix 1 and Figure 3).

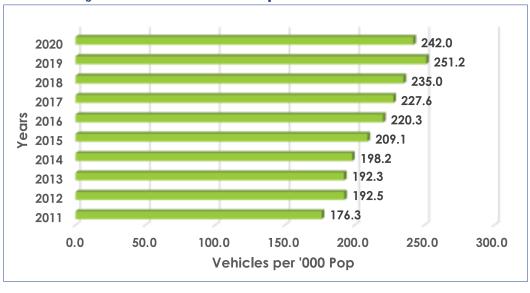

Figure 3: Vehicles Per 1,000 Population, 2011-2020

1.2.2.1 Privately Owned Vehicles - First Registrations

There was a decrease of 38.1 percent in vehicles registered for the first time in 2020, from 67,434 in 2019 to 41,733. Passenger cars dominated in first registrations, at 71.6 percent of the total. Vans followed with 9.1 percent. The vehicle category with the least number of first registrations was motor cycles with 0.6 percent. See **Table 3** in **Appendix 1** and **Figure 4** below.

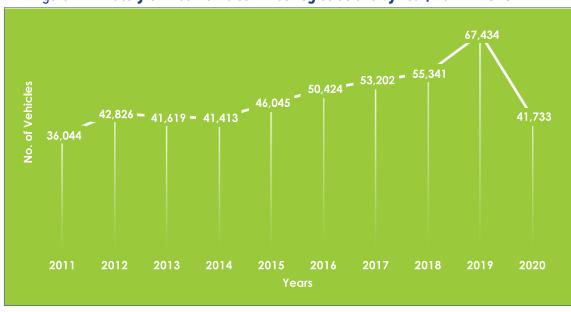

Figure 4: Privately Owned Vehicles - First Registrations by Year, 2011 - 2020

1.2.2.2 Privately Owned Vehicles - First Registrations by Type of Vehicle and **Registration Station**

Registration Stations under the custody of the Department of Road Transport and Safety (DRTS) are found all over the country, some of which are housed in Post Offices. This is an initiative aimed at reducing the distance that people travel to the nearest licensing offices and to enable the Department of Road, Transport and Safety to cope with the ever growing vehicle population. There are currently 27 DRTS licensing offices nationwide, including post offices. Stations like Gaborone have more than one licensing office in order to cope with the volume of vehicles in the city. There are stores like Sefalana Cash and Carry which are used as licensing offices as well.

Most of the vehicles registered for the first time in 2020 were recorded in Gaborone, accounting for 56.0 percent of the total. Francistown and Lobatse followed with 14.1 and 7.3 percent of the total first registrations respectively. (Tables 4 and 4a, Appendix 1).

1.2.2.3 Privately Owned Vehicles - First Registrations by Vehicle Type and Body Type

Vehicles registered for the first time fall under three categories, namely; used, brand new and rebuilt. Most of the vehicles registered for the first time in 2020 were used, constituting 79.2 percent of the total. These were followed by brand new vehicles at 20.7 percent. Rebuilt vehicles constituted only 0.1 percent. See Table 2.2a.

Vehicles originating from Japan constituted 69.0 percent of total first registrations and 86.8 percent of them were used vehicles. South Africa and Botswana origins followed at 20.5 and 4.5 percent of total first registrations respectively; and out of these, 5.0 percent of South African origins were used while 3.0 percent of Botswana origins were used.. As for brand new vehicles most of them came from South Africa (79.6 percent). The bulk of rebuilt vehicles came from Botswana (62.1 percent). See Table 2.2b.

1.2.2.4 Privately Owned Vehicles - First Registrations by Type and Make of Vehicle

Toyota accounted for 37.3 percent of total first registrations, making it the most popular make in Botswana. Passenger cars constituted 75.0 percent of these vehicles. Honda and Mazda followed Toyota with 10.3 percent and 10.1 percent respectively. Volkswagen made up 8.7 percent while Nissan constituted 6.1 percent of the total. See Tables 5 and 5a in Appendix 1 for details.

1.2.2.5 Privately Owned Vehicles – Vehicle License Renewals by Year and Type of Vehicle

Vehicle license renewals are done every year and each license is renewed on the month of the vehicle's first registration. License renewals of privately owned vehicles increased by 0.8 percent in 2020, from 521,133 renewals in 2019 to 525,347. Most of these were for passenger cars, accounting for 64.1 percent of the total. License renewals for Vans followed at 19.4 percent. Renewals for motor cycle licenses were the lowest, they made up only 0.3 percent of the total. See Tables 6 Appendix 1.

1.2.2.6 Privately Owned Vehicles – Vehicle License Renewals by Type and Make of Vehicle

Licenses for Toyota vehicles were the most renewed in 2020, constituting 46.4 percent of total license renewals, 64.7 percent passenger cars. Licenses of Mazda vehicles followed at 7.3 percent. Those of Nissan and Honda vehicles were next at 7.1 percent) and 6.7 percent respectively. See Table 7 and 7a Appendix 1.

1. 2.3 Government Vehicle Stock

These vehicles are under the custody of Central Transport Organization (CTO). CTO is a government department responsible for procurement, management, repair and disposal of government vehicles. The government fleet increased by 0.7 percent in 2020, from 12,623 vehicles recorded in 2019 to 12,709 vehicles. The composition of the fleet changes frequently due to new procurement, donations, boarding or privatization of old vehicles when government departments are privatized. See Table 8, Appendix 1.

2. **ROAD SAFETY**

This report publishes only accidents reported to the Botswana Police. The report shows vehicle accidents categorized by road traffic violations, accident severity and casualties.

2.1 Accident Trend

Road accidents recorded decreased by 19.1 percent in 2020, from 18,623 in 2019 to 15,075 accidents. On average road accidents went down by 2.3 percent annually from 2011 to date.

Accidents per 1,000 vehicles declined by 17.8 percent in 2020. On average, accidents per 1,000 vehicles went down by 7.7 percent annualy from 2011 to date. Accidents per 10,000 population declined by 19.1 percent, from 79.5 accidents in 2019 to 64.3 accidents in 2020. See Table 3.1 and Figure 5a below as well as Table 9 in Appendix 2.

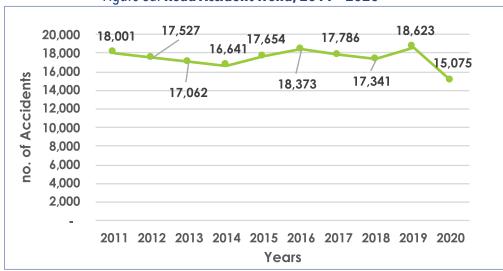

Figure 5a: Road Accident Trend, 2011 - 2020

2.2 Accident Severity

2.2.1 Accident Severity by Junction Control

During 2020, road crashes that resulted in death were 265 and accounted for 1.8 percent of total road crashes. Serious and minor crashes accounted for 3.4 and 16.0 percent of total crashes respectively. The rest of the crashes (78.8 percent) resulted in damages to vehicles only.

Out of 265 fatal crashes, there were 325 fatalities. Most of the crashes (73.8 percent) were recorded at a place where there was no junction. These crashes resulted in 75.9 percent of casualties of which 7.2 percent were fatal. Those that happened at a stop sign followed (11.8 percent), resulting in 11.6 percent of casualties and 4.8 percent of fatalities. Crashes that happened at working traffic lights constituted 8.6 percent of total crashes, while those that happened where traffic lights were not working made 1.5 percent. Where the traffic police were present, fewer crashes occurred (0.3 percent). Table 3.2 below shows the details.

2.2.2 Accident Severity by Day of the Week

Accidents that occurred on the weekend (i.e Friday, Saturday and Sunday) constituted 49.2 percent of total accidents. Accidents peaked on Saturday, accounting for 18.4 percent of total accidents. Accidents that happened on Friday followed with 17.1 percent while those that happened on Sunday were 13.7 percent of the total. The least number of accidents was recorded on Tuesday, at 12.4 percent of the total. See **Table 3.3** below.

2.2.3 Accident Severity by District and Time of Occurrence

In 2020, 84.5 percent of the total crashes occurred between 0600 hrs and 2200 hrs. Accidents peaked between 1600 hrs and 2000 hrs, accounting for 26.5 percent of the total.

Crashes that happened between 1600 hrs and 2200 hrs constituted 46.0 percent of total fatal crashes while those that occurred between 1000 hrs and 1800 hrs were 33.2 percent of total fatal crashes.

In Francistown crashes that occurred between 1000 hrs and 2000 hrs accounted for 64.4 percent of total crashes in the district. Crashes that occurred at the same time in Gaborone made up 59.4 percent of the total. Tables 3.4, 10 in Appendix 2 and Figure 6).

2.2.4 Accident Severity by Police District

Two districts had a high number of accidents in 2020, namely Gaborone West and Gaborone, they accounted for 26.7 and 25.9 percent of total accidents respectively. The two districts resulted in 26.0 percent of fatal crashes. Serowe and Kutlwano followed with 5.1 percent each while Kasane and Ghanzi which had few accidents constituted 1.1 percent of total accidents each. See Table 3.4a below.

2.2.5 Accident Severity by Road Surface Type

Most (85.5 percent) of the accidents in 2020 occurred in tarred roads. This was a 20.9 percent decrease compared to 2019. Accidents that happened on tarred roads resulted in 86.4 percent of fatal crashes. Gravel roads came second with 6.6 percent of total accidents which resulted in 9.4 percent of fatal crashes. Sand had the second lowest number of accidents (3.9 percent), resulting in 3.4 percent of fatal crashes. See Table 3.5

2.3 Road Traffic Violations by Month

Road traffic violations are cases where motorists violate traffic laws and regulations, for example not obeying traffic signs or over speeding. There was a decrease of 14.4 percent of traffic violations committed in 2020 from 352,556 violations in 2019. The months that had the most traffic violations were January and February accounting for 11.2 percent of total traffic violations each. March and December followed with 10.5 and 10.0 percent respectively. The offence category that had the most traffic violations was overspeeding with 20.0 percent. Overspeeding was followed by driving without a license with 12.4 percent of the total. See Table 3.6 below.

Table 3.6: Road Traffic Violations by Month, 2020

		Type of Offence

Note: FTPDL is Failure to produce a licence. The difference between it and Driving without a licence is that in FTPDL the driver has a license but is not carrying it at that time while driving without a licence the driver does not have a licence at all. Public Service Vehicle are offences committed by public service vehicles

2.4 Casualties

Accidents that occurred in 2020 resulted in 5,052 casualties, of which there were 325 deaths, 819 serious injuries and 3,908 minor injuries. This was a reduction of 21.6 percent in casualties from 6,442 recorded in 2019. Fatalities and serious injuries declined by 28.9 and 30.8 percent respectively. See Table 11 in Appendix 2.

Casualties per 1,000 vehicles were 8.7, this was a decrease of 18.7 percent from 10.7 in 2019. Casualties per 10,000 population also decreased by 22.6 percent from 27.5 casualties in 2019 to 21.3. The number of fatalities per 10,000 vehicles declined by 26.3 percent from 7.6 in 2019 to 5.6 fatalities in 2020. Fatalites per 100,000 population went down from 19.5 in 2019 to 13.7 in 2020. This is shown in Table 9 in Appendix 2 and Figure 7 below.

5.6 7.6 2019 8.3 27.1 2018 8.4 28.0 9.0 2016 28.8 2015 8.7 9.9 2013 10.1 13.1 2011 0.0 5.0 10.0 15.0 20.0 25.0 30.0 35.0 Casualties/Fatalities ■ Fatalities per 10,000 pop Casualties per 10,000 pop

Figure 7: Casualties and Fatalities per 10,000 Population 2011-2020

2.4.1 Casualties by Gender and District

Out of 5,052 casualties recorded in 2020, 3,410 (67.5 percent) were males while 1,642 (32.5 percent) were females. Male fatalities were 242 which was 7.1 percent of total male casualties, while female fatalities were 83 making 5.1 percent of total female casualties. Gaborone West accounted for 20.2 percent of male casualties and made up 25.2 percent of female casualties. Gaborone constituted 12.9 percent of male casualties and 14.9 percent of female casualties. See Table 12, Appendix 2.

2.4.2 Severity of Injury and Cause of Casualties

A lot of casualties were caused by human error in 2020. Driver carelessness accounted for 46.5 percent of casualties. The class that suffered the most casualties were the drivers, accounting for 36.8 percent of casualties in this category. Drivers losing control were the second in causes of casualties, at 23.3 percent of total casualties. Failure to obey a traffic sign and animals (domestic & wild) caused 6.4 and 5.1 percent of casualties respectively. Vehicle defects caused 2.3 percent of casualties, while an unlicenced driver and a Pedestrian error accounted for 4.4 and 4.3 percent of total casualties respectively. As driver carelessness resulted in most casualties, education about road safety should be directed mostly towards drivers and law enforcement done in order to reduce the number of accidents. See Table 13, Appendix 2.

2.4.3 Pedestrian Casualty by District

Pedestrian casualties in 2020 were 977, a 26.1 percent decrease from 1,322 casualties in 2019. Out of 977 pedestrian casualties, 74 died (7.6 percent).

Gaborone West recorded the highest number of pedestrian casualties, accounting for 24.3 percent of the total. Gaborone followed with 23.6 percent. Mahalapye and Maun recorded 6.8 and 6.4 percent of total casualties respectively. Gaborone incurred a high number of fatalities, with 24.3 percent of total pedestrian fatalities, followed by Gaborone West with 20.3 percent. See Table 3.7a below.

2.4.4 Pedestrian Casualty by Age Group

The group of pedestrians that incurred a high number of casualties in 2020 were the 21-25 years age group, with 11.8 percent of total pedestrian casualties. This age group was followed by the 31-35 and 26-30 years age groups which accounted for 10.8 and 10.7 percent respectively.

The 31-35 years age group accounted for 14.9 percent of total fatalities. The 26-30 years accounted for 13.5 percent while 36-40 and 0-5 years age groups followed with 12.2 percent each.

In exception of the 61-65 years age group which went up by 20.8 percent, pedestrian casualties for most of the age groups declined in 2020 when compared to 2019. See Table 3.7 b below

2.4.5 Driver Casualties by Age

There were 2,019 driver casualties in 2020. This was a 15.5 percent decrease from 2,389 driver casualties in 2019. The most affected age group was the 31-35 years age group which accounted for 20.4 percent of total driver casualties. The age groups that followed were 26-30 and 36-40 with 18.5 and 17.7 percent respectively. See Table 14, Appendix 2.

2.4.6 All Road User Casualties by Type of Road User

In 2020, car users were the most affected road users, accounting for 60.7 percent of total casualties. Pick-up and mini bus users followed with 16.5 and 7.0 percent respectively. Tractor users accounted for the least number of casualties, with 0.1 percent only.

Car users also constituted the highest number of fatalities in 2020, making 63.1 percent of total fatalities. These were followed by pick-up and 4-wheel drive users, constituting 16.3 and 6.2 percent of the total. See Table 3.8a.

2.4.7 Casualties and Severity of Injury by Collision Type

This sub-section looks at how accidents happen on our roads and the resulting casualties from those accidents. The type of accident that resulted in more casualties was the "Side Collision" which had 21.4 percent of total casualties. The "Roll over Collision" followed with 20.5 percent. Accidents which resulted in pedestricians being hit by vehicles constituted 18.5 percent of total casualties, while the "Rear end" and "Head on" collisions accounted for 11.1 and 8.7 percent respectively

The "roll over" and "hit pedestrian" collision types resulted in more fatalities, 28.6 and 21.8 percent of total fatalities respectively. Other collision types that resulted in more deaths were the "head on" and "side" collisions, accounting for 13.8 and 12.9 percent of total fatalities respectively. See Table 3.8b.

2.4.8 Casualties by Light Conditions

Casualties that happened during the day accounted for 56.9 percent of total casualties, resulting in 51.7 percent of fatalities. Casualties that happened in the dark followed with 32.1 percent of total casualties, resulting in 40.6 percent of fatalities. See Table 3.9 below.

2.4.9 Casualties by Injury and Age

The age group that incurred a high number of casualties was the 26-30 years age group, accounting for 16.7 percent of total casualties. It was followed by the 31-35 years age group with 16.6 percent of total casualties. The age groups 21-25 and 36-40 years accounted for 13.4 percent each.

The age group that incurred the highest number of fatalities was the 31-35 years with 16.6 percent of total fatalities. The 36-40 years age group followed with 15.7 percent. The age groups 41-45 and 26-30 years accounted for 13.8 and 12.9 percent of fatalities respectively. See Table 3.10.

3. AIR TRANSPORT

3.1 Aircraft Movements

Aircraft movements declined by 75.6 percent in 2020, from 87,124 movements in 2019 to 21,283 movements.

Aircraft movements have been decreasing at an annual average rate of 3.8 percent since 2011 to date. See Table 15, Appendix 3 and Table 4.1 below.

Table 4.1: Aircraft Movements By Type of Flight: 2011 - 2020

3.1.1 Aircraft Movements by Airport

The airport that accounted for most of aircraft movements was Maun which registered 59.3 percent of the total. Sir Seretse Khama International Airport (SSKIA) accounted for 27.8 percent of total aircraft movements. See Table 15, Appendix 3 and Figure 8 below.

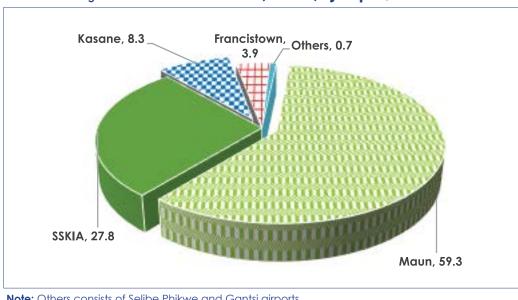

Figure 8: Aircraft Movements (Percent) by Airport, 2020

Note: Others consists of Selibe Phikwe and Gantsi airports.

3.2 Air Passenger Movements

There was a decline of 76.6 percent in passenger movements recorded in 2020 from those which were recorded in 2019. International and domestic passenger movements went down by 80.2 and 71.7 percent respectively.

All the airports realized a decrease in passenger movements, with the most notable decrease in Kasane (83.7 percent) and Maun (77.0 percent. Sir Seretse Khama Airport (SSKIA) accounted for 54.9 percent of total passengers, while Maun constituted 31.6 percent of the total. Details on Air Passenger Movements are shown in Table 4.2, 4.2a, Figure 9, as well as Table 16 in Appendix 3.

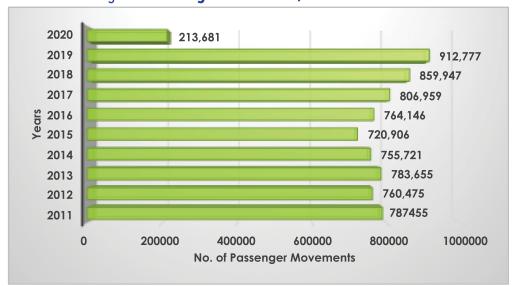

Figure 9: Passenger Movements, 2011 - 2020

3.2.1 Air Passenger Movements by Type of Flight

In 2020, scheduled passenger movements accounted for 77.8 percent of total passenger movements, while non-scheduled, private and scenic movements constituted 19.5, 1.3 and 1.4 percent of the total respectively. In addition, of all passenger movements, 39.5 percent were scheduled arrivals, while 38.3 percent were scheduled departures.

Scheduled passenger arrivals constituted 78.9 perecent of total arrivals. Non-scheduled and private arrivals accounted for 19.8 and 1.3 percent of total arrivals respectively. As for passenger departures, 78.8 percent were scheduled while 19.8 percent were non-scheduled and 1.4 percent were private. (see Table 17, Appendix 3).

4. RAILWAY TRANSPORT

4.1 Rail Passengers

The passenger train was not operational in 2020 due to travel restrictions in relation to Covid-19.

4.2 Rail Goods Traffic

Transportation of goods by rail depends on a lot of factors, some of these being the demand for goods in the market. Rail also faces stiff competition from road transport, as such it sometimes loses its customers to road transport.

The following terms used in Rail Goods Traffic needs to be taken into account when going through the associated table (Table 20 in Appendix 4). Local Traffic refers to goods originating from Botswana and ending in Botswana, Botswana Origin is total exports plus local traffic. Botswana Total is the sum of total imports and Botswana Origin. Total Traffic is the sum of Botswana total and transit traffic.

Goods transported through rail in 2020 went down by 1.3 percent, from 1,220,496 net tonnes carried in 2019 to 1,204,981 net tonnes. Most categories of goods transported through rail decreased when compared to 2019. Total imports and total exports declined by 11.2 and 7.3 percent respectively. Botswana total declined by 8.9 percent. Three categories of goods transported through rail realized an increase. Imports from north and transit traffic both increased by more than 100 percent, while Exports to North increased by 5.98 percent. See Table 18 in Appendix 4 and Figure 10.

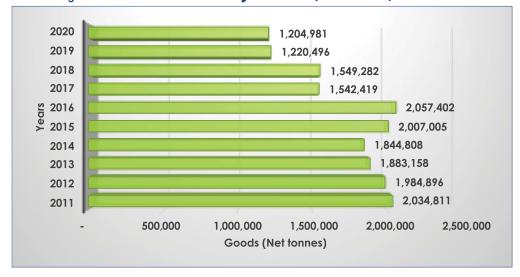

Figure 10: Rail Goods Traffic by Direction (Net tonnes) 2011-2020

4.3 Revenue From Rail Goods Traffic

The revenue generated from the transportation of goods using rail decreased from P246,694 million in 2019 to P243,506 million in 2020, a 1.3 percent decrease. Revenue went down in most categories of goods transported except on imports from the north, exports to the north and transit traffic. Revenue accrued from exports to the north increased by 9.3 percent while for the other two categories revenue collected went up by more than 100 percent. See Table 19, Appendix 4.

5. WATER TRANSPORT

This section shows the movement of vehicles and passengers through the Pontoon on the Zambezi river to and from Zambia, Democratic Republic of Congo and Angola.

Table 5.1: Kazungula Ferry Passengers by Quarter and Gender (January - December 2020)

6. GOODS CARRIED BY ROAD (IMPORTS)

Road transport plays a pivotal role in movement of goods and services both locally and internationally. In 2020, goods imported into Botswana by road increased by 4.1 percent from 3.5 million tonnes in 2019 to 3.7 million tonnes. Imports transported through road grew at an average annual rate of 3.2 percent from 2017 to date. The value of imports transported through road in 2020 increased by 0.9 percent from P40 billion in 2019 to P40.3 billion. The value of goods grew at an average annual rate of 8.0 percent. This is shown in Table 6.1 below

Table 6.1: Goods Carried by Road (Imports) 2017 - 2020

Imports,	Imports, Quantity (tonnes and value(Millions pula) - 2017 - 2020											
Year	Quantity (tonnes)	Value (millions Pula)										
2017	3,359,508	32,108,878,216										
2018	3,455,684	36,864,809,702										
2019	3,547,358	39,963,025,895										
2020	3,692,997	40,328,430,210

Bokspits, Kang, Mabutsane, Tsabong, Tshane, Werda	Baines Drift, Bobo- nong, Botshabelo, Selebi Phikwe, Semolale	Letlhakeng, Molepolole, Thamaga, Takatokwane	Dibete, Mochudi, Olifant's Drift, Sikwane
Gaborone West:	Kanye District:		
Gaborone West, Naledi, Ramotswa, Sir Seretse Khama Barracks, Mogoditshane	Kanye, Sejelo, Jwaneng, Moshupa, Phitshane Molopo		

TECHNICAL NOTE

The data used to compile this report is administrative data from different sources. Road accidents statistics, in tabular form, is sourced from Botswana Police Services. Railways statistics is from Botswana Railways and the Department of Road Transport and Safety provides Motor Vehicle registrations data. Water data is sourced from Botswana Revenue Services. Freight carried by road comes from Statistics Boyswana.

All the calculations in the report relating to population were derived from the 2011 Population and Housing Census' results and the other years beyond 2011 are projections.
