Preface

This is the eleventh publication of the quarterly External Trade Statistics Digest. Its main purpose is to make available a timely summary of the external trade data before the release of the Annual External Trade Statistics publication.

The commodity classification used in this publication is the Harmonized Commodity Description and Coding System (HS) of Botswana. It groups commodities into sections. Each section is divided into chapters, which are then subdivided into divisions, under which similar commodities are identified. Divisions are finally broken down to give the most detailed commodity descriptions.

The tables in this publication give both import and export statistics by section, chapter and division. Commodity codes are given at four digit level, the first two denoting the chapter and the last two the division. Details on direction of trade, or breakdown of exports into domestic exports and re-exports are not included. The most detailed information at the full six digit level, is provided in the Annual External Trade Statistics publication. Detailed analysis of the information is contained in the Stats Brief and the External Trade Supplement publications. Information can also be obtainable at the External Trade Statistics unit on request.

Sources and methods used in the collection, compilation and processing of trade statistics data are outlined in Appendix 1.

The value of imports and exports for quarter three of 1996 to quarter two of 1997 (Q3 96 to Q2 97) are presented in Table 1 and Table 2 respectively. Exports are the sum of domestic exports and re-exports. The "total" column in these tables refer to the sum of the four quarterly totals. The values are in UA, which is the common currency used by the Southern African Customs Union (SACU) members. The UA is equivalent to the South African Rand. An exchange rate table for "major" currencies is included in Appendix 2.

The pattern of imports and exports on a quarter-to-quarter basis and fluctuations in the level of trade for any particular commodity group need to be interpreted with caution. This is because the values are at current prices and are liable to the influence of seasonal variation.

Summary

Exports revenue have increased from UA 2,201,298 thousand in the first quarter of 1996 (Q1 96) to UA 2,995,725 thousand in the first quarter of 1997 (Q1 97). This is a 36.1 percent nominal increase. Similarly, the second quarter of 1997 shows an increase in exports, of 16.2 percent in nominal terms. The value for the second quarter of 1997 stands at UA 3,139,329 compared to UA 2,700,631 in the second quarter of 1996. In total, exports revenue for the first two quarters of 1997 stand at UA 6,135,054 thousand compared with UA 4,901,928 for the first two quarters of 1996. This is a 25.2 percent nominal increase.

The European Union (EU) maintains its position as the "major" source of Botswana's exports revenue for the first two quarters of 1997. The EU accounts for 68.4 percent of the revenue, followed by the Common Customs Area (CCA) and Zimbabwe at 14.1 and 4.6 percent respectively. For the first two quarters of 1997, Diamonds account for 74.2 percent of total export revenue, followed by Vehicles at 9.6 percent. In the corresponding period, in 1996, Diamonds and Vehicles accounted for 69.3 and 16.3 percent of the export revenue respectively.

Imports increased from UA 3,284,645 in the first two quarters of 1996 to UA 4,657,040 in the corresponding period of 1997. This is a 41.8 percent nominal increase. The increase is mainly due to a marked rise in the imports of Vehicles and Transport Equipment (VTE) in the second quarter of 1997, which stands at UA 754,596 thousand. This is a 182.6 percent increase compared with VTE imports for the first two quarters of 1996, which add up to UA 413,350 thousand.

The CCA remains the major source of Botswana's imports, with UA 3,298,751 thousand worth of imports for the first two quarters of 1997. This accounts for 70.8 percent of the total import bill over the period. South Korea comes second at UA 603,068 thousand (12.9 percent), followed by the EU at UA 268,594 thousand (5.8 percent).

The summary tables below show trends in major commodity groupings of imports and exports and the direction of trade for the first two quarters of 1997. The corresponding period for 1996 (the shaded part) is included for comparison.

APPENDIX I

SOURCES AND METHODS OF TRADE STATISTICS

This section covers step by step detail of the processing of Customs and Excise documents for the production of Trade data for Botswana. There are different sections through which documents pass for processing; sorting, coding and checking and data entry including validation. The processing of documents within these sections is detailed out below.

Sorting

Documents are sent on a weekly and monthly basis from all Customs Points of Entry and Exit and Inland Stations to the Department of Customs and Excise. Relevant documents are then passed on to the External Trade Statistics Unit. These documents come in three different groups; the "Import Bills of Entry", "Export Bills of Entry" and "Transfer Traffic Forms". The first two are received monthly, while the third is received weekly.

Accompanying each group of documents is a control form. Import bills of entry (BOE) are accompanied by form *C. Misc 50 A*, export bills of entry by form *C. Misc 50 B*, and the transfer traffic forms by *C. Misc 51*.

Sorting is done by *procedure type* (see Summary Table 1) and then the documents are batched in fifties. Each batch has a control sheet, *C. Misc 52*, where summary information about the documents in a batch is entered.

The **procedure types** used "for data processing purposes" were created within the unit for the specific purpose of uniquely identifying the lowest level of detail describing the customs procedure and clearance purpose combination for each transaction (see **Summary Table 2**).

The unit-assigned "form number" is one of the key items used to uniquely identify a document/transaction. The single letter **form type** indicated in Summary Table 1 above as "for data processing purposes" forms part of this form number. It was designed to be used for similar customs procedures (e.g. domestic exports and re-exports to CCA, procedure types C2 and C3 respectively, were both assigned letter D), except where a procedure type differs from others within a customs procedure (e.g. procedure type 50DP within customs procedure direct imports from outside CCA was assigned letter T while the rest were assigned letter U). See Summary Table 2 for details on procedure types. Apart from the main purpose of uniquely identifying each document/transaction, this way of numbering is used to avoid mixing procedures at data entry.

After sorting, the documents are controlled out using the unit's **Control Form A**.

Coding

Botswana, being a member of the common customs area, uses the single "Declaration of Goods Removed Within the Southern African Customs Area" document, **CCA1**, used to cover imports, exports and re-exports within the common customs area.

CCA1 IMPORTS

Documents are those dealing with imports (**procedure type CI**). An importer's code, which is a unique six digit number is assigned to each document. Next, the country of origin is highlighted to make it stand out and the mode of transport is coded 01 for rail, 02 for road and 03 for air.

The status of the despatch is also checked by the coders to verify whether it is a permanent or just a temporary despatch. A despatch is temporary if the importer only intends to use the item in question for a short period of time in the country of import before returning it back to country of origin.

The next stage of coding involves the checking of validity of the commodity code (tariff heading) and consistency with the commodity description. This is followed by examining the unit of the statistical quantity for consistency with the code, and then checking for the actual quantity.

After making the necessary corrections/adjustments following these coding procedures, values in the documents are checked. The main purpose of this stage is to get sensible freight and insurance costs for each consignment (all the transactions in a single document constitute a consignment), a value that sometimes must be estimated. The freight and insurance costs are added to the total fob (free on board or cost) value which is already in the document to get the total cif (cost plus freight and insurance costs) value. At this stage, each line or transaction in the document is given a number to reduce the possibility of omission on the part of data entry operators.

Information on Botswana's imports from outside the CCA cleared in CCA ports for customs purposes comes in a CCA1 accompanied by the relevant South African bill of entry completed in the CCA port. Information is transcribed from the bill of entry onto the CCA1 (**procedure type H**) at stations. Since the form CCA1 does not provide all the information needed (for example the fob value of the goods), it is important that the bills of entry which contain all the necessary information accompany it.

CCA1 Exports

Generally the same process is followed for the CCA exports (procedure type C2) and re-exports (procedure type C3) as described in the imports from CCA above.

When the documents have been coded they are then controlled out to data entry.

CE23 and C&D

The bills of entry for the export of domestic products, not ex-warehouse, to outside the CCA CE23 and documents C & D for Malawi, (procedure type 23), usually only require assignment of the importer's code and some currency conversion (different documents are used for exports to Malawi because of an old agreement). Units of statistical quantity are also checked.

CE24 and A&B

Re-export, or export of imported goods, to outside the CCA bills of entry, CE24 and documents A & B for Malawi, (procedure type 24), are quite similar to CE23 in processing.

CE25

The country's ex-warehouse domestic exports to outside the CCA are cleared in bill of entry CE25, (procedure type 25). These are dutiable products like cars and soft drinks, and the only coding involved covers trader code and country of destination.

CE 500 & 490, 510, 600 and 610

For bills of entry CE500 & CE490, CE510, CE600 and CE610, the procedure type depends on the clearance purpose. Listed below is a summary of the bills of entry by clearance purpose and procedure type.

Summary Table 3 details out the bills of entry used together with the above, either for continuation purposes where there is more than one transaction (line) in a document, or vouchers of correction (amendment) where errors of omission or commission are discovered after clearing a consignment. If an error is made while completing a bill of entry, and later on the error is discovered, a fresh bill of entry with the correction(s) is prepared, and this is called a voucher of correction (VOC).

Summary Table 3

BOE	Continuation form	Voucher of correction
CE500	CE501	CE504
CE510	CE501	CE514
CE600	CE601	CE604
CE610	CE611	CE614

CE500

Bill of entry CE500 deals with imports directly entering into the market. Care has got to be taken to make sure that the total number of lines (transactions) indicated as contained in the document are indeed present. When coding, for each document codes are assigned on importers, country of origin and mode of transport following the same process as in the CCA1s.

There is need to find the total cost of freight and insurance for all the transactions in the document and this is worked out as the difference between the total c.i.f value and the customs value (f.o.b).

CE490

CE490 is a Departmental document, which works just as CE500 since it is used to allocate deposits on dutiable imports to the relevant duty heads after a stipulated period. If someone imports a dutiable item but for some reason, does not pay the duty, a deposit decided on by the customs officer as equivalent to the chargeable duty is left with the customs station and the importer is given a period of time in which he can claim the money or a certain balance if the deposit is more than the correct duty. If he does not show up in the stipulated period of time, the deposit is taken as duty paid on a normal import CE500 and departmental document CE490 is completed.

Also included in the document is the description and statistical code of the goods, the quantity and the customs (fob) value of the goods. Transport and insurance charges are estimated.

CE510

Bill of entry CE510 is used for transfer of liability, and the coding done is similar to that of the CE500, except that the "rebate user" is taken as the importer.

Transfer of liability means that the importer will not pay the expected duties on the imports as they get cleared. Instead he passes on the responsibility to another party, on whose behalf the importation was done, who in most cases is a registered rebate user.

CE600

CE600 is the bill of entry for ex-warehouse imported goods. That is, all those imports which are warehoused at time of importation using bill of entry CE500 pending customs clearing (for example paying customs duty) are cleared in this document.

The imports only come into the economy if the clearing purpose is any of those listed in Summary Table 2, otherwise they are not treated as trade. The coding done in this document is similar to that in the CE500, except that as an ex-warehouse transaction, the transport code is mostly entered as 09 - the code for mode of transport unknown. The cif value is only estimated since it is not given in the document.

CE610

Dutiable CCA production (i.e. ex-warehouse) is cleared in bill of entry CE610 and the coding is similar to that in the CE500. This production mostly is petroleum products, beverages, vehicles and cigarettes/cigars. There is no c.i.f value in the document so this has to be estimated. Botswana's dutiable local products are treated separately since they do not constitute trade. Instead of being entered on the system, the information is maintained on a separate spread-sheet, basically for SACU meetings purposes.

Form J

Individuals declare Personal Imports in Form J. These are in three categories namely, *new goods* with statistical code 999901, *used goods* coded 999900, and *repairs/improvements* coded 999902 and there is a separate section for each one of the three categories in this form.

There is no commodity coding involved for individual transactions, rather the total value for each category is taken. Except for airports, the officers responsible for coding the form first add up the values of the three categories separately for each station for each month. From experience it was noticed that the country of origin of the goods is synonymous with the station, except for airports.

For the airports, however, each document is coded and data entered separately since information on country of origin differs from document to document. The coding thus includes the country code.

C Misc 5

C Misc 5, the form used for transfer of goods by post into the country is pre-coded. The countries are grouped by region (CCA, Overseas and Zimbabwe) and the packages are divided into three categories, Ordinary, Insured and Cash on Delivery. Table 4 details out a summary of these codes.

Summary Table 4

Region	Package Category	Code
CCA	Ordinary (O.R.D)	999801
	Insured (I.N.S)	999802
	Cash on Delivery (C.O.D)	999803
Over Seas (Other Countries)	Ordinary (O.R.D)	999811
	Insured (I.N.S)	999812
Zimbabwe	Ordinary (O.R.D)	999821
	Insured (I.N.S)	999822
	Cash on Delivery (C.O.D)	999823

Data Entry

Trade statistics data entry utilises a computer network system. The data entry group is divided into two teams, one dealing with CCA1 import documents (by far the biggest in volume) and the second dealing with the rest of the documents.

There are three control forms used for data entry, the first two of which are for CCA1 imports. The first one is a supervisors form for controlling the documents CCA1 into the section, by batch. The second control form is for the operator and is completed after each entry session.

More details on data entry and the technical aspect of it are available in the system documents. This includes a full description of the operation of the management program.

Validation

Every few days a validation run which indicates the errors in addition (Cif value incorrect) and entry errors (Fob value incorrect) together with "missing forms" is printed out for the validation team. They then have to investigate each reported error by scrutinising the documents involved.

Transfer To EuroTrace

When the data has satisfied the above validation procedure, it is then prepared into EUROTRACE readable form, pending transfer from the data entry system (the network file-server) to the management machine. (EUROTRACE is a processing package especially commissioned by EUROSTAT, the Statistical Office of the European Communities, for processing customs data).

One of the greatest strengths of EUROTRACE lies in its capacity to let a user interrogate data extensively. Before one can use this facility, however, the information has got to be read (loaded) into the

EUROTRACE data banks.

Many users make requests for information in a form different from the usual presentation in the publications. This is one area where EUROTRACE comes in very handy since one can interrogate the data in many different ways, as long as the information is on products (commodities), trading partners (countries) and period.

For any further information you can approach the External Trade Statistics Unit at Rizka House in the African Mall, Gaborone.
