## 1. Preface

This statistical release contains the third quarter of 2021 Gross Domestic Product (GDP) estimates by economic activity and components of final demand at current and constant prices.

Botswana's National Accounts are compiled according to the 2008 System of National Accounts (2008 SNA) framework. The accounts presented in this publication adhere to the enhanced General Data Dissemination System (e-GDDS) of the International Monetary Fund (IMF), which sets out standards on coverage, periodicity and timeliness of data.

**The estimates are provisional and subject to change. First estimates are normally based on limited data and hence cannot be precise and absolute. The figures are revised after receiving finalized or audited data from companies in which some differences and inconsistencies in the previously published data may be observed.**

These estimates are not seasonally adjusted, hence the variations may differ depending on the quarters.

The nominal Gross Domestic Product for the third quarter of 2021 was P49, 260.5 million compared to P48, 684.0 million registered during the previous quarter. This represents a quarterly increase of 1.2 percent in nominal terms between the two periods. During the quarter under review, Public Administration and Defence became the major contributor to GDP by 18.6 percent, followed by Mining & Quarrying by 12.0 percent.

## 2. Quarterly Gross Domestic Product (QGDP)

Quarterly Gross Domestic Product estimates assist in the analysis of short-term movements in the economy, as opposed to the annual GDP that provides an in-depth and comprehensive view of the changes in the economy. Quarterly National Accounts adopt the same concepts, definitions and structure as Annual National Accounts.

### 2.1 Revisions in this release

Revisions have been made to the quarterly Gross Domestic Product (GDP) estimates published in September 2021. The changes were due to the updated source data and have affected Agriculture, Water & Electricity, Construction, Information Communication and Technology (ICT), Public Administration & Defence and Taxes on products.

Gross Domestic Product is an aggregate measure of production; it refers to the production of all resident units within the borders of a country, which is not exactly the same as the production of all productive activities of residents. Some of the productive activities of residents may take place abroad. The contribution of labour is accounted for through the compensation of employees paid to non-residents and received by the economy. In addition, some primary income generated within the country may go to non-residents.

GNI is derived as Gross Domestic Product plus net primary incomes from abroad (net compensation of employees from abroad plus net property income from abroad).

Net compensation of employees is income earned by Botswana residents abroad minus income earned by non-residents in Botswana. Net property income is Botswana Investment abroad minus foreign investment in Botswana.

Gross National Income decreased by 1.2 percent in 2020 while Gross Domestic Product at current prices decreased by 4.8 percent during the same year. In 2020, GNI was estimated at P168, 192.3 million while GDP was P171, 041.9 million (See table 9).

3.6 Gross National Disposable Income (GNDI)

Gross National Disposable Income measures income available to the total economy for final consumption and gross saving. GNDI is derived as Gross National Income plus the inflow of current transfers minus outflows of current transfers. Current transfers' inflows include SACU receipts.

GNDI decreased by 3.4 percent from P192, 359.7 to an amount of P185, 840.6 million in 2020 (See table 9).

3.7 Gross Savings (GS)

Gross Saving represents excess of current income over current expenditure. It is derived as Gross National Disposable Income minus final consumption expenditure which comprises of Government consumption expenditure, Household consumption expenditure and Non Profit Institutions Serving Households (NPISH) expenditure.

In 2020, Gross Savings of the nation decreased by 27.6 percent (See table 9).

3.8 Consumption of Fixed Capital (CFC)

The CFC is the decline, during the course of the accounting period, in the current value of the stock of fixed assets owned and used by a producer as a result of physical deterioration, normal obsolescence or normal accidental damage. In 2020, Consumption of fixed capital at constant prices was P28, 138.9 million compared to P26, 919.1 million registered in 2019, recording an increase of 4.5 percent (See table 10).

### 3.9 Capital Stock

It is generally accepted that the level of Gross Fixed Capital Formation, and hence the growth in fixed capital stock, has a material influence on an economy's labour productivity, business competitiveness and ultimately the rate of increase in the standard of living. Estimates of capital formation and the stock of physical capital are therefore key indicators for assessing macro-economic performance.

An estimate of the capital stock refers to a value that is attached to the total physical capital in existence at a specific point in time in an economy. In addition, the estimates of the value of capital stock reflect the actual physical capacity available for repeated use in the production of other goods and services. In practice, it is usually calculated as gross or net capital stock in real terms and the "perpetual inventory method" (PIM) was used to produce estimates of the stock of tangible reproducible assets.

At current prices, the capital stock was estimated at P354, 764.7 million in 2020 compared to P335, 271.9 registered in the previous year, an increase of 5.8 percent (See table 12).

At constant prices, capital stock increased by 4.6 percent in the year under review from P296, 793.3 million recorded in the previous year to P310, 438.6 million in 2020 (See table 13).
