PREFACE

This publication is the seventh annual POPULATION REPORT to be produced by Central Statistics Office. The publication gives a summary of basic demographic indicators and provides the vital statistics data for the country during 1999. The indicators covered in this report include;

1. Mortality indicators
2. Fertility indicators
3. Population distribution

The indicators were estimated based on 1991 Population and Housing Census results while the vital statistics data was extracted from civil registration records. It should be note that the marriages statistics given in this report does not include the customary marriages. Also, divorce statistics is not included.

This publication is a result of collaborative efforts between the Department Civil Registration in the Ministry of Labour and Home Affairs and the C.S.O.

BACKGROUND

(i) Demographic Indicators, Population Distribution and Population Projections

The section gives a summary of the following demographic indicators; fertility, mortality, marriages, population sex-age structure and spatial distribution of the population. These indicators are very important especially for assessment of the country's social and economic status. The indicators summarised in this report were extracted from the 1991 Population and Housing Census Projections Report and from other CSO publications.

(ii) Civil Registration

Civil registration plays a vital role in modern society. It underpins the civil status of each person giving them protection as well as protecting society as a whole.

The registration of births and deaths in Botswana started in 1966. For people who were born before 1966, chiefs or sub chiefs verified their births. When the registration was started, it was compulsory only in towns and major villages while in other places people were not compelled to register. However, this compounded the problem of poor registration of vital events and as result the registration act was amended in 1998 to make registration of vital events compulsory in all places. Despite this, the registration of births or deaths is still done only when the need arises, e.g. when the child goes to school or when beneficiaries of the deceased have to place a claim with an insurance company.

Civil Registration officers who are based in districts through out the country collects and register all births, deaths and marriages occurring in Botswana. Certificates for these events are issued at the respective districts.

Since 1986, Central Statistics Office through Demography Unit has been extracting vital events statistics from vital events registers kept by the Department of Civil Registration.

Due to low registration of births and deaths experienced throughout the country, the Department of Civil Registration in 1980 embarked on a pilot project whereby births and deaths were registered immediately when they occur. This project covered only four districts. In those districts, registration of births and deaths was made compulsory. Civil Registration officers were sent to compulsory registration districts to register births and deaths immediately when they occur at health institutions. For the births and deaths, which occur at home, family welfare educators did the registering. The District Commissioners register births and deaths in non-compulsory registration areas.

Although the compulsory registration of vital events in compulsory districts did make some improvements, the project had its own problems and therefore it was never rolled out to other districts. As a result, registration remained poor in those other districts. However, the department of Civil Registration has now embarked on a massive project of computerizing the registration of births and deaths in all districts.

SUMMARY ANALYSIS

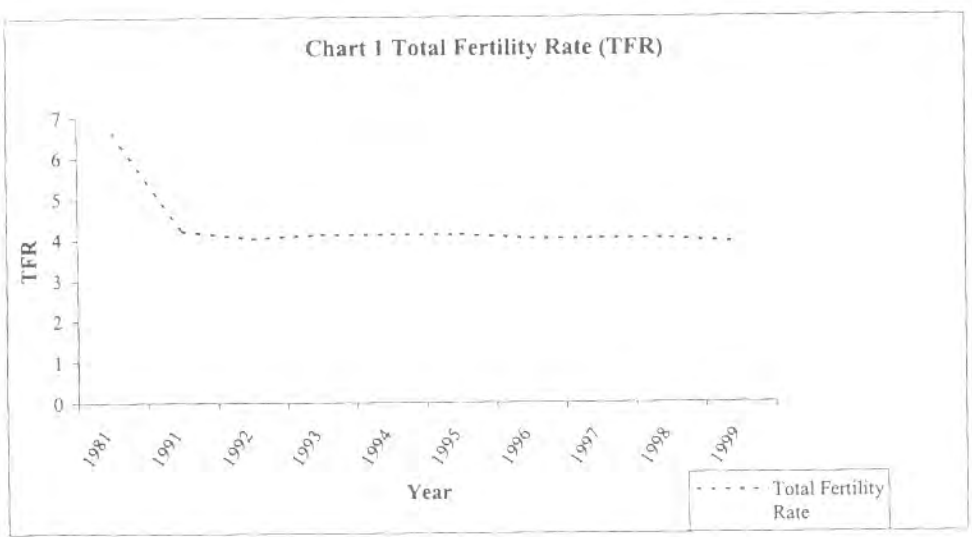
1. SELECTED DEMOGRAPHIC INDICATORS

1.1 Population and Vital Statistics

Table 1.1 shows that between 1998 and 1999, the number of citizens abroad increased from 44,785 to 46,344 this represent a percentage increase of 3.5 percent. During the same period, the number of non-citizens in Botswana increased from 34,940 to 35,785 (2.4 percent). Also, the number of households increased slightly (4.1 percent) from 366,480 households in 1998 to 381,549 households in 1999.

1.2 Fertility

According to Table 1.1 the live births per 1000 increased since 1981. Live births increased from 45, 056 births in 1981 to 53,407 births in 1999. Despite the increase in the number of births, crude birth rate declined from 47.8 per 1000 population in 1981 to 32.1 per 1000 population in 1999. The average number of children ever born to a woman during her reproductive period (Total fertility rate or T.F.R) declined from 6.6 live births per woman in 1981 to 3.9 live births per woman in 1999 (See Chart 1).



1.3 Mortality

Indicators of mortality show an overall decline in mortality during the period 1981 to 1999. Crude death rate decreased from 13.0 deaths per 1,000 population in 1981 to 10.6 deaths per 1,000 population in 1999. Infant mortality rate declined from 71.0 deaths per 1,000 live births in 1981 to 38.1 deaths per 1,000 live births in 1999. Child mortality rate declined from 35.0 deaths per 1,000 population in 1981 to 7.6 deaths per 1,000 population 1999. The expectation of life at birth increased from 56.2 years in 1981 to 67.0 years in 1999.

1.4 Population Density

Table 1.2 shows that the cities of Gaborone and Francistown have over the past years remained the most populous cities in Botswana. Francistown had the highest population density of 1,229 persons per square kilometre followed by Gaborone with population density of 1,199 persons per square kilometres. The districts of Kgalagadi, Ghanzi, Chobe and North West were the least populated regions with population density of one person per square kilometre.

1.5 Age groups

Table 1.3 shows that Central district had the highest number of estimated population in all age groups in 1999. The district had a population of 471,597 people. Gaborone district had the second highest number of 202,680 of people in the age groups. The mining town of Sowa had the least number of people in the special age groups with a population of 3,503 persons.

1.5 Population by Village/Town

It is shown by Table 1.4 that since 1981, Gaborone city has always had the largest number of people. From 1981 to 1999, the population of Gaborone city grew from 59,657 to 202,680 people. The town with the least number of people was Sowa, which came into existence after 1981. It had less than 4,000 people in 1999.

Regarding the urban villages, Molepolole had the highest number of people with a total population of 45,811 people in 1999, while Kasane had the least population of 6,632 people.

2. VITAL EVENTS

2.1 . BIRTHS

Although civil registration act stipulates that a birth should be registered within three months of occurance, it is common for a birth not to be registered when it occurs in a family. This occurs mostly in districts were registration has not been made compulsory.

2.1.1. Occurrences

It is shown by Table 2.1 that in 1999, the highest proportion (42.7 percent) of births occurred in Central district. It should also be noted that Central district had the highest number of estimated persons in special age groups. The second highest proportion i.e.13.3 percent of births occurred in Southern district, while the least proportion i.e. less than zero percent of births occurred in Sowa Town.

2.1.1.1 Month of Occurrence

According to Table 2.2 the incidence of birth is not felt at any particular point in time but occurs over a period, say a year. Higher proportions of births occurred during the first four months of the year in 1999. Out of this, 50.2 percent of the births were male.

2.1.1.2 Age of mother

In 1999, the majority of births, which occurred were to single women in the age group 20-24 as shown by Table 2.3. The proportion of births to single women was 83.1 percent, of these, the age group 20-24 accounted for 31.5 percent of the total births that occurred.

2.1.2. Registrations

2.1.2.1 District of registration

Table 2.4 shows that Central district registered most (27.2 percent) births in 1999. This was followered by Kweneng district with 15.3 percent. Sowa and Kgatleng districts accounted for less than one percent of the births that occurred during 1999.

2.1.2.2 Month of registration

Table 2.5 shows that registration of births was done through out 1999. However, the registration of births was low for some months during the year. The highest proportion of 19.9 percent of registered births was recorded during the month of

December while the lowest proportion of 3.4 percent was registered in January and in September.

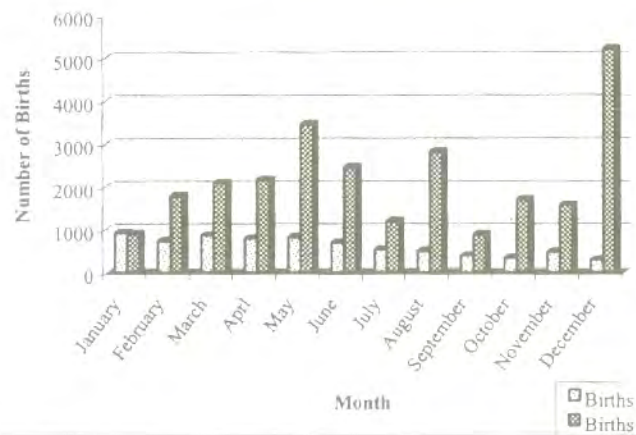
2.4.2.3 Age and marital status

During the year 1999, the highest proportion of registered births recorded was 30.5 percent. IT was recorded in the age group 20-24. These births mostly occurred to single mothers, the proportion was 67.3 percent (see Table 2.6). The least proportion of births registered was among the age groups less than 15 and age group 50 and over, each accounting for less than one percent of the total births.

2.1.3. Observations

It shown by chart 2 that in 1999, there were more births registered than births occurring in that year. This revels that the registration of births is still considered to be a matter of choice rather than a national duty, non-compliance of which could be subject to penalties. The registration of birth is usually done when a birth certificate is required (for an instance when a child goes to school).

Chart 2 Births Occuring and Births Registered in 1999



2.2. DEATHS

The registration of deaths is done at the health institutions by medical practitioners. A doctor completes a notice of death form called "ordinary doctor Form B5" for deaths occurring in institutions and Form B4 for deaths occurring outside institutions.

2.2.1. Occurrences

2.2.1.1 District of occurrence

The data on Table 2.7 shows that during 1999, the highest proportion (39.4 percent) of deaths occurred in Central district. The least proportion (less than one percent) of deaths occurred in the districts of Francistown, Orapa and Jwaneng.

2.2.1.2 Month of occurrance

Table 2.8 shows that the occurrence of deaths was proportionally distributed by month through out 1999. The magnitude of the distribution shows that the deaths varied from month to month. during 1999.

2.2.1.3 Age at death

Data on Table 2.9 shows that the highest proportion of deaths in 1999 occurred among the age groups 25-34 and 35-44 with 24.0 percent and 15.9 percent respectively. The deaths were higher (15.6 percent) for the age group 65 and over. The lowest proportion (2.0 percent) of deaths occurred in the age group 5-14.

2.2.1.4 Exact place of occurrance

According to Tables 2.10 and 2.11 the majority of deaths (66.9 percent) during 1999 occurred at the health facility and those deaths were recorded on form Doctor B5.

2.2.1.5 Cause of death

Table 2.12 shows that in 1999, the leading cause of death was infectious parasitic. Infectious parasitic accounted for 16.4 percent of the deaths, which occurred. The second leading cause of death was the diseases of circulatory system, which accounted for 14.8 percent of the deaths. Other diseases, namely mental disorders, complications of pregnancy, childbirth and the Peurperium, diseases of the skin and subcutaneous tissues, diseases of the Muscular skeletal system and connective tissues were the least causes of death since together they have accounted for an average of 2.5 percent of the total deaths.

2.2.2. Registrations

2.2.2.1 District of registration

The registration of deaths, like the registration of births is usually done long after the event occurred. This is revealed by the difference in the number of deaths occurring and the number of deaths registered.

Figures on Table 2.13 shows that the highest proportion (25.3 percent) of deaths was registered in Central district, followed by 19.3 percent, which was registered in Gaborone district. The mining town of Sowa and North East district recorded the least proportion of deaths in 1999 (both registered an average of less than one percent).

2.2.2.2 Month of registration

The distribution of deaths was even through out the year as shown by table 2.14. The highest proportion (9.1 percent) occurred in December and the least (7.1 percent) occurred in February.

2.2.2.3 Age at death

The highest proportions of registered deaths during 1999 were recorded among the age groups 25-34 at 23.6 percent followed by 15.7 percent in the age group 35-44. The age group 5-14 was the least (2 percent) affected (see Table 2.15).

2.2.2.4 Exact place of death and form type

Tables 2.16 and 2.17 shows that the highest proportion of deaths registered in 1999 were recorded at health facilities on form Doctor B5. The proportion of deaths registered at the health facility was 63.7 percent and form Doctor B5 recorded 82.5 percent of those the deaths.

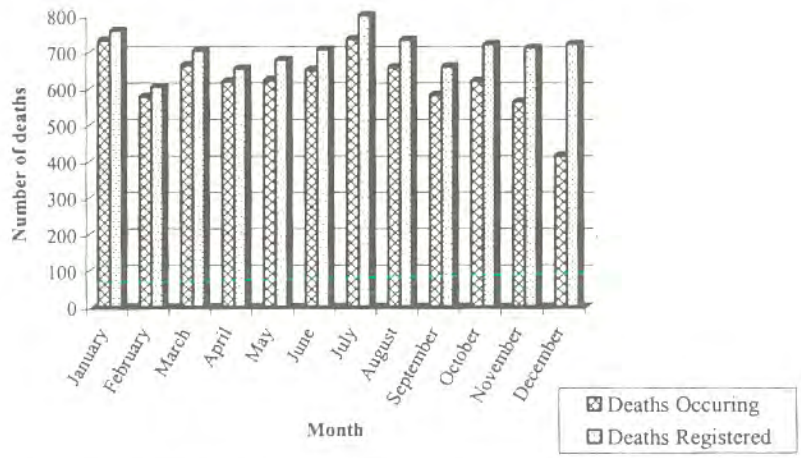
2.2.2.5 Cause of death

During 1999, 15.6 percent of the deaths registered were due to infectious and parasitic causes as indicated by Table 2.18. The least proportion (less than 0.1 percent) of the deaths were due to Diseases of muscular – skeletal system and connective tissues.

2.2.3. Observations

The deaths data shows that there were more deaths being registered than deaths occurring. There were 7,447 deaths occurring while there were 8,519 deaths registered in 1999 (see Chart 3).

Chart 3 Deaths Occuring and Deaths Registered in 1999



2.3 MARRIAGES

Registered marriages in Botswana normally take place on the basis of sanctioning by either the church or the court of law. In both cases, marriage may be arranged through Banns (i.e. the usual practice of proclaiming the names of the candidates for the period of twenty one days before formalising the marriage) or by a court licence that expedites the marriage process. The processed marriage forms are then sent to the Department of Civil Registration in the Ministry of Labour and Home Affairs for issuance of marriage certificate.

The summary analysis below covers occurrence and registration of marriages extracted from records in the Department of Civil Registration for the period January to December 1999. It should be noted that these marriages do not include customary marriages.

2.3.1 District and month of registration

In 1999, Central district, which also had the highest number of estimated people in special age groups, registered 21.1 percent of the marriages (see Table 2.19). It was followed by Gaborone district with a proportion of 18.7 percent of the total marriages. Orapa district had the least proportion of 0.1 percent of the total marriages.

The table further shows that the registration of marriages was done throughout 1999. Higher proportion of 21 percent of the marriages were registered in December while the low proportions 3.3 percent and 4.4 percent were registered in February and March respectively.

2.3.2 Marriage type

Table 2.20 indicates that the most popular type of marriage in 1999 was Court Banns. This type of marriage constituted over 80.9 percent of all marriages registered. Church licence constituted less than 1.0 percent of all marriages registered.

2.3.3 Age of husband/wife at marriage

The age group that married most for males in 1999 was the age group 30-34 as indicated by the data on Table 2.21. This age group accounted for 30.0 percent of the marriages that were registered. The least marrying age group was the age 20-24. Regarding the females, the highest proportion (36.1 percent) of the marriages registered was on the age group 25-29 (see Table 2.22). The least marrying female age group was the age group 50 years and over.

2.3.4 Occupation of husband/wife and marriage type

Tables 2.23 and 2.24 show that males and females in all occupation categories do marry. The highest proportion of 24.9 percent of marriages registered for the males was in the category of Professionals. The least proportion of 5.0 percent of of the males who got married was in the category of Service Workers. Whereas for the females the highest proportion of 43.4 percent was recorded in the category of Service Workers while least the proportion of 0.1 percent aws in the category of Transport workers.

Tables 2.25 and 2.26 show that during 1999, the majority of the people who got married were residing in towns and other urban centres at time of marriage. For both husbands and wives the highest the proportions of those who married were living in living in Gaborone. The proportions were 23.5 percent and 22.6 percent for both husbands and wives respectively. The least proportions of 1.0 percent of husbands were residing in Chobe while for the wives the least proportion of 07 percent was residing in Orapa.
